

AKM® 2G Servo Motor Selection Guide

with AKD® Family Servo Drive Systems

KOLLMORGEN

Because Motion Matters™

Kollmorgen: Your partner. In Motion.

Every solution comes from a real understanding of the challenges facing machine designers and users.

Innovators consistently rate Kollmorgen as one of their best motion systems manufacturing partners. Whether you are looking for classic servo motors, direct-drive servo motors, stepper motors, drives & amplifiers, gearing, actuation, or multi-axis motion controllers, Kollmorgen is one of the few companies in the world who actually designs and manufactures all of these products.

Our customers are leaders in many industries such as Aerospace & Defense, Printing, Packaging & Converting, Food & Beverage Processing, Medical Imaging, In Vitro Diagnostics & Laboratory Automation, Pharmaceutical Manufacturing, Material Forming and Cutting, Oil & Gas, and Robotics. Kollmorgen is also a leader in Warehouse Automation, including complete AGV systems, software, awareness and autonomy.

Our Automation Solutions can be found on Mars and in space, ships and submarines, O&G drilling and metrology, surgical robots and laser eye surgery, even inside artificial hearts. These are just a few applications that demand high-performance and high-quality while satisfying their specific needs.

Because motion matters, it's our focus: Motion can distinctly differentiate a machine and deliver a marketplace advantage by increasing its performance and dramatically improving overall equipment effectiveness (OEE).

High-performance motion can make your customer's machine more reliable and energy-efficient, enhance accuracy and improve operator safety. Motion also represents endless possibilities for innovation.

We've always understood this potential, and thus have kept motion at our core and in our Vision, Mission & Values, relentlessly developing products that offer precise control of torque, velocity and position accuracy in machines that rely on complex motion.

Removing the Barriers of Design, Sourcing, and Time

At Kollmorgen, we know that OEM engineers can achieve a lot more when obstacles aren't in the way. So, we clear obstacles in three important ways:

Integrating Standard and Custom Products

The optimal solution is often not clear-cut. Our application expertise allows us to modify standard products or develop totally custom solutions across our whole product portfolio so that designs can take flight.

Providing Motion Solutions, Not Just Components

As companies reduce their supplier base and have less engineering manpower, they need a total system supplier with a wide range of integrated solutions. Kollmorgen offers complete solutions as well as motion subsystems that combine programming software, engineering services and best-in-class motion components.

Global Footprint

With direct sales, engineering support, manufacturing facilities, and distributors spanning the Americas, Europe, the Middle East, and Asia, we're close to OEMs worldwide. Our proximity helps speed delivery and lend support where and when they're needed.

Financial and Operational Stability

Kollmorgen is part of Altra Industrial Motion. A key driver in the growth of all Altra divisions is the Altra Business System, which relies on the principle of "kaizen" – or continuous improvement. Using world-class tools, cross-disciplinary teams of exceptional people evaluate processes and develop plans that result in superior performance.

Kollmorgen: Your partner. In Motion.

AKM® Servo Motor Family

Kollmorgen's AKM family of servo motors gives you unprecedented choice and flexibility from a wide range of standard products so you can select the best servo motor for your application. By pairing AKM servo motors with our family of plug-and-play AKD® servo drives, selecting the right motion control products has never been easier. Pick from thousands of servo motor/servo drive combinations outlined in this selection guide, the AKM Servo Motor Selection Guide, or go to our website to find the best solution for your application.

Standard AKM/AKM®2G servo motors and AKD servo drives offer the best of both worlds – the exact specifications of a custom solution with the faster delivery times and lower cost of a standard catalog product. For your truly unique motion control applications, work with our engineering team to customize a solution for your machine design. Either way, standard product or customized, we can help you choose the motion control solution that meets your exact requirements.

The Benefits of AKM2G Servo Motor

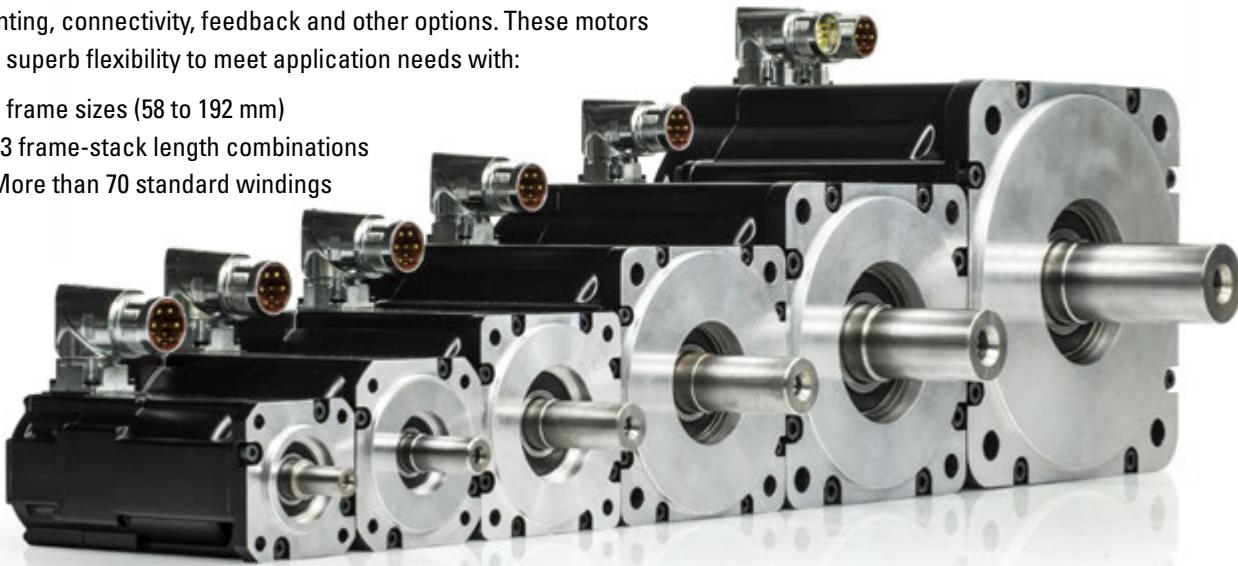

Smaller Footprint	Reduce machine space <ul style="list-style-type: none"> • For equivalent torque it is possible to use a smaller size motor than competitive motors. • The range of AKM2G sizes provides for optimizing for length or flange square depending on which dimension is most critical. • Use of the smaller motor saves space achieving equivalent performance in a smaller footprint machine or saving space for other machine elements.
Increased Torque	Higher performance <ul style="list-style-type: none"> • For a given frame size the AKM2G provides an average continuous torque increase of 30% compared to competitive motors of equivalent size. • Higher torque in the same package size increases machine performance (greater throughput, move heavier loads, etc.).
Wider Speed Range	Faster operation <ul style="list-style-type: none"> • For many AKM2G sizes the maximum speeds are higher than competitive motors. • Higher speeds ⇒ operate machines faster ⇒ greater throughput.
Greater Flexibility	More options to match needs <ul style="list-style-type: none"> • AKM2G is designed to support a wider array of feedback, brake, thermal sensor and shaft seal options – this greater flexibility means a higher probability of meeting application requirements with a standard product. • The AKM2G design has the potential for greater CoEngineering (modification) thanks to the new housing design. With a more flexible design for CoEngineering addressing applications not covered by catalog standards is increased.
Higher Efficiency	Reduce energy consumption <ul style="list-style-type: none"> • AKM2G has lower equivalent resistance than competitive solutions. For equivalent motor frame sizes AKM2G will typically be more energy efficient (2-5%). • Energy consumption is reduced with AKM2G compared to competitors.

AKM®2G Servo Motor Series

AKM2G Motors Offer Extremely High Torque Density and High Acceleration

The AKM2G high-performance motor series offers a wide range of mounting, connectivity, feedback and other options. These motors offer superb flexibility to meet application needs with:

- 6 frame sizes (58 to 192 mm)
- 23 frame-stack length combinations
- More than 70 standard windings

Features

Torque

0.64 to 72 Nm maximum continuous torque (5.6 to 640 lb-in) in 23 frame-stack combinations. Specific torques are often available from multiple frame sizes to optimize mounting and inertia matching capabilities.

Speed

Speeds up to 8000 rpm meet high speed application requirements. Windings tailored to lower speeds are also available.

Voltage

AKM2G motors can be applied to all standard global voltages. Windings are specifically tailored to work with drives powered by 120, 240, 400 or 480 Vac. AKM2G motors can be operated on DC voltages and voltages of less than 120Vac; for these applications please contact Kollmorgen Customer Support for assistance with sizing and selection

Feedback

AKM2G motors include resolver, Absolute Digital Encoders, or SFD (Smart Feedback Device) feedback options to meet specific application requirements.

Kollmorgen Cables Offer the Complete Solution

Kollmorgen offers complete cable solutions for connecting drives and motors. This includes static, low cost cable sets for simple applications to high bend, high flex, hybrid cables that combine feedback and power in one cable. Not sure which cable offering would best suit your needs? No problem. See the Kollmorgen 2G Cable Guide, or Kollmorgen Customer Support is available to discuss cable options and what makes the most sense for your machine.

Mounting

Multiple mounting standards are available to meet common International standards.

Smoothness

Smooth performance results from low-cog, low-harmonic distortion magnetic designs.

Connectivity

Rotatable IP65 connectors, or straight connectors are both available to provide flexibility. Single connectors/plugs (combined power and feedback) are also available to minimize motor and cable cost (SFD and Absolute Digital Encoders only).

Thermal

Windings are rated conservatively at 100°C rise over a 40°C ambient while using 155°C (class F) insulation materials. Motors meet applicable UL, ULC, and CE requirements and include thermistors.

Additional Options:

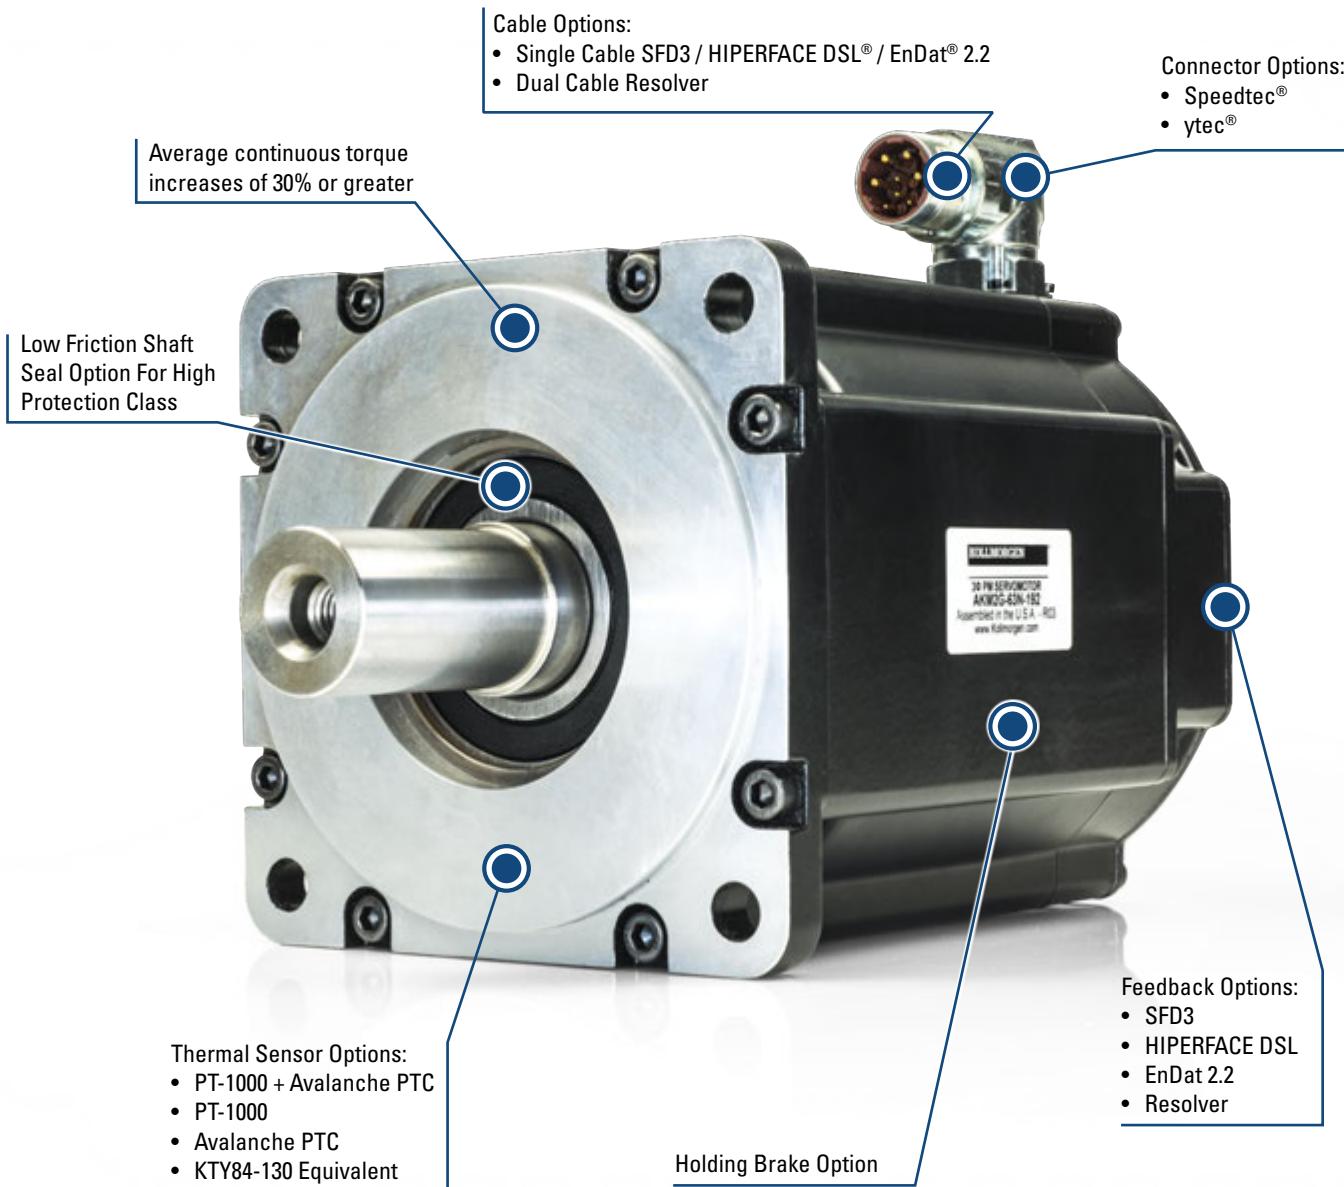

- Holding brakes
- Shaft sealing options available
- Feedback devices
- Shaft and mounting variations
- Custom windings
- Thermal sensor options

AKM® 2G represents the latest evolution of the industry leading AKM motor product family.

With average continuous torque increases of 30%, OEMs and users can achieve substantial machine performance increases without increasing the size of the motor.

The improved torque density allows a smaller motor to be used which reduces the machine footprint without sacrificing performance.

- Extensive Selection of Feedback options to match application and performance requirements
- Shaft, mounting and connector options for optimal flexibility
- Holding Brake option

AKM® Servo Motor Family Options

AKM®2G Servo Motors

Higher Power Density

Performance – Efficiency

AKM2G-2x

Flange: 58 mm
Power: 0.206 - 1.16 kW
Max Speed: 8000 RPM
Stacks: 4

The smallest AKM2G. For dual cable connection with resolvers the compact ytec® connector is used.

AKM2G-3x

Flange: 72 mm
Power: 0.175 - 1.77 kW
Max Speed: 8000 RPM
Stacks: 3

Available with motor-mounted rotatable single or dual cable connectors (feedback dependent).

AKM2G-4x

Flange: 88 mm
Power: 0.267 - 2.85 kW
Max Speed: 6000 RPM
Stacks: 4

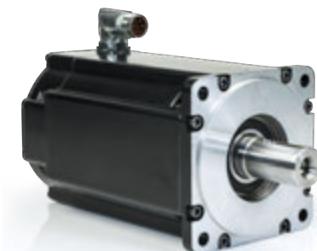

Available with motor-mounted rotatable single or dual cable connectors (feedback dependent).

AKM2G-5x

Flange: 114 mm
Power: 0.78 - 5.28 kW
Max Speed: 6000 RPM
Stacks: 4

Available with motor-mounted rotatable single or dual cable connectors (feedback dependent).

AKM2G-6x

Flange: 142 mm
Power: 1.56 - 7.79 kW
Max Speed: 6000 RPM
Stacks: 4

Available with motor-mounted rotatable single or dual cable connectors (feedback dependent).

AKM2G-7x

Flange: 192 mm
Power: 2.42 - 11.8 kW
Max Speed: 6000 RPM
Stacks: 4

Provides torque levels previously seen only in larger size motors. Offered with motor-mounted rotatable single or dual cable connectors (feedback dependent), including optional holding brakes.

The entire lineup of AKM2G and AKM servo motors, excluding AKM8, offer a motor-mounted rotatable single connector for Kollmorgen's exclusive third generation Smart Feedback Device (SFD3), and industry standard multi-turn digital encoders like HIPERFACE DSL and EnDat, as well as incorporating optional brake support.

AKM® Servo Motors

Broader Power Range

Durability – Economy

AKM1

Flange NEMA/mm: 17/40
Power: 0.08 - 0.30 kW
Max Speed: 8000 RPM
Stacks: 3

The AKM11x, the smallest by both stack and length with "M" option connectivity and Smart Feedback Device (SFD)

AKM2

Flange NEMA/mm: 23/58
Power: 0.10 - 0.94 kW
Max Speed: 8000 RPM
Stacks: 4

The AKM21x frame size shown with "D" motor-mounted rotatable single connector, Commutating Encoder and optional holding brake.

AKM3

Flange NEMA/mm: na/70
Power: 0.09 - 1.31 kW
Max Speed: 8000 RPM
Stacks: 3

The AKM33x frame size shown with "D" motor-mounted rotatable single connector and SFD feedback.

AKM4

Flange NEMA/mm: 34/84
Power: 0.21 - 1.73 kW
Max Speed: 6000 RPM
Stacks: 4

The AKM42x frame size shown with "D" motor-mounted rotatable single connector and SFD feedback.

AKM5

Flange NEMA/mm: 42/108
Power: 0.56 - 3.87 kW
Max Speed: 6000 RPM
Stacks: 4

The AKM51x frame size shown with "C" motor-mounted rotatable double connectors and optional holding brake.

AKM6

Flange NEMA/mm: na/138
Power: 1.17 - 6.24 kW
Max Speed: 6000 RPM
Stacks: 4

The AKM65x frame size shown with "C" motor-mounted rotatable double connectors and optional holding brake.

AKM7

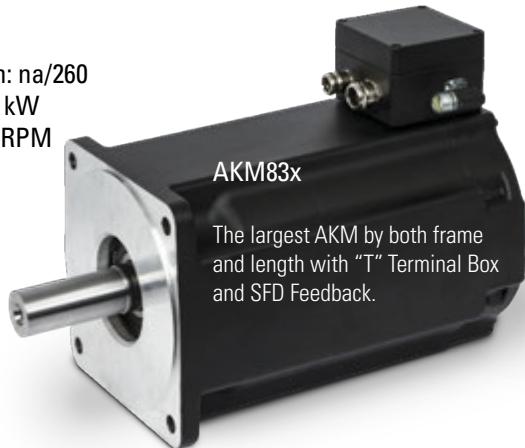

Flange NEMA/mm: na/188
Power: 3.97 - 8.58 kW
Max Speed: 6000 RPM
Stacks: 3

The AKM74x frame size shown with "C" option connectivity and holding brake

AKM8

Flange NEMA/mm: na/260
Power: 12.4 - 19.8 kW
Max Speed: 3000 RPM
Stacks: 3

AKM83x

The largest AKM by both frame and length with "T" Terminal Box and SFD Feedback.

This Selection Guide focuses on the AKM2G product in detail; refer to the AKM Selection guide for detailed information on AKM motors.

AKM® Servo Motor Family Options

AKM® Washdown and Food Grade

These motor variants are used in applications that are subject to strict hygiene regulations in which it is essential that the formation of nuclei and corrosion are avoided and in which machines must be cleaned cyclically. These motors are based on the standard types AKM2 – AKM6 with special modifications for use in the food-processing industry, in the packaging industry, or even outdoors. An option for AKM Washdown and Washdown Food motors is to coat the flange.

AKM Washdown

Part Numbers:

AKMxxx-xxxx-0W: Washdown with unpainted flange

AKMxxx-Wxxxx-0W: Washdown with painted flange

Note: The AKM Washdown motors must not come into contact with any unpacked food.

Application Area:	Harsh Environments, Outdoors
Application Examples:	Transport in the food and packaging area without contact with food, radar stations, and wind turbines
Standards:	UL, CE, RoHS
Surface:	Gray 2K paint
Immunity:	Against tested industrial cleaning agents*, corrosion-resistant
Degree of Protection:	IP67
Shaft:	303 Stainless steel (CSN417029)
Rotary Shaft Seal:	PTFE
Lubricant:	Industrial bearing grease, non-food-grade
Connector:	Stainless steel, smooth surface
Screws:	Stainless steel
Name Plate:	Engraved, additional name plate in the package

AKM Washdown Food Grade

Part Numbers:

AKMxxx-xxxx-0F: Washdown with unpainted flange

AKMxxx-Wxxxx-0F: Washdown with painted flange

Note: The surface of the washdown food motor has passed all tests as per FDA Global Migration for indirect contact with food. Any direct contact with unpacked food is not permitted.

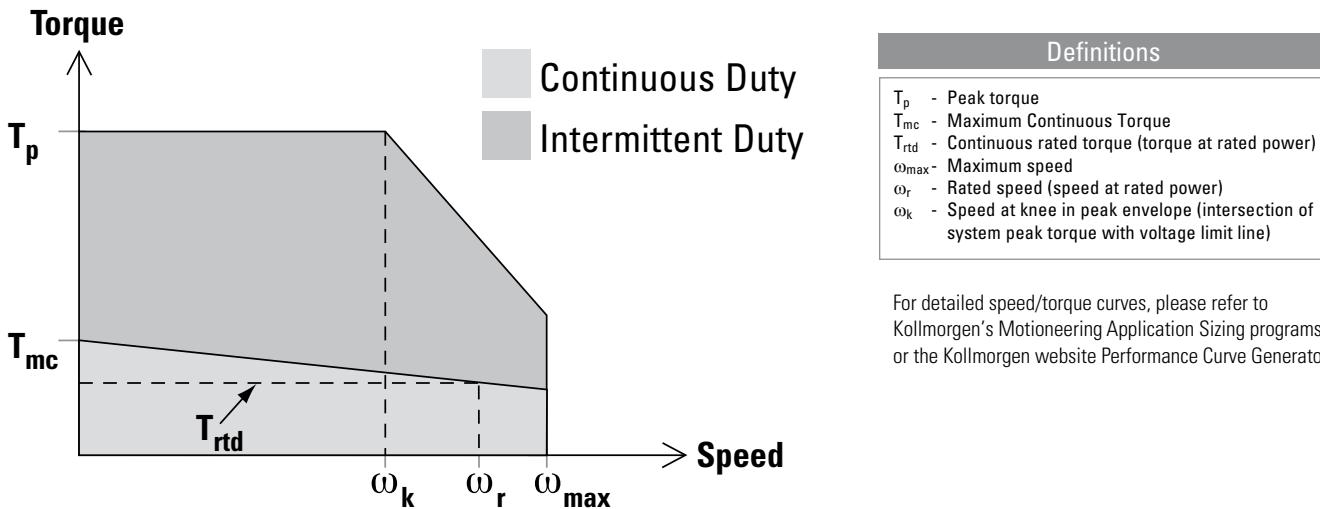

Application Examples:	Food and beverages industries; cutting, packing, and filling without direct contact with food; motor positioned laterally or below the food.
Standards:	UL, CE, RoHS, FDA
Surface:	White 2K FDA compliant paint**
Immunity:	Against tested industrial cleaning agents*, corrosion-resistant
Degree of Protection:	IP67
Shaft:	303 Stainless steel (CSN417029)
Rotary Shaft Seal:	PTFE as per FDA
Lubricant:	Food grade as per FDA
Connector:	Stainless steel, smooth surface
Screws:	Stainless steel
Name Plate:	Engraved, additional name plate in the package

* Resistance of the AKM Washdown and AKM Washdown Food Grade surfaces to the following industrial cleaning agents has been tested: P3-topactive DES, P3-topactive LA, P3-topax 56, P3-topax 66, P3-topax 91

**Meets FDA global migration standards

AKM[®]2G Systems Overview

How to Build a Servo Drive and Motor System

System torque/speed information on the following pages is designed to help you select the optimum brushless servo motor/drive combination. The nominal values in this data illustrate performance for the recommended motor/controller systems.

Drive and Motor Performance Curves

The performance characteristics of a brushless servo system (motor/drives combination) are described by a torque/speed operating envelope. As shown above, the shaded areas of the curve indicate the continuous duty and intermittent duty zones of the system.

Continuous Duty Zone

The continuous duty zone is bordered by the maximum continuous torque line up to the intersection with the intermittent duty line. The continuous torque line is set by either the motor's maximum rated temperature, or the drives' rated continuous current output, whichever is less. The system voltage limit line is set by the voltage rating of the drives, the line voltage supplied, and the motor winding. The system can operate on a continuous basis anywhere within this area, assuming the ambient temperature is 40°C or less.

Intermittent Duty Zone

The intermittent duty zone is bordered by the peak torque line and the system voltage limit line. The peak torque line is set by either the drives' peak current rating, which the drive can produce for a limited time, or the maximum rated peak current for the motor, whichever is less. Refer to the Rating Data on the pages that follow. Note: Higher torque levels may be achievable at higher power levels.

Consult Kollmorgen Customer Support for more details. The system voltage limit line is set by the voltage rating of the drive, the line voltage applied and the motor winding. Operation in the intermittent zone must be limited to a duty cycle that will produce an RMS system torque falling within the continuous duty area. The RMS torque value is a function of the magnitude of the intermittent torque and the percentage of the time spent at that torque.

De-rate Calculations

De-rate curves shown for each motor (refer to pages 20-21, 26, 30-31, 36-37, 42-43, and 48-49) assume continuous operation at the selected speed and at maximum rated temperature. Operating intermittently and/or at less than rated temperatures will reduce the De-rate. Kollmorgen Customer Support is available to discuss the specifics of your application and optimum sizing.

AKM[®]2G / AKD[®] Family System Performance

System Performance – AKM2G Servo Motors driven by AKD2G and AKD Servo Drives

AKM2G Servo Motor ^①	AKD2G/AKD Servo Drive ^①	Frame Size mm	Max Cont.Torque T _{mc} Nm (lb-in)	Peak Torque at stall T _{ps} Nm (lb-in)	Rated Speed N _{rtd} RPM	Max System Speed ^② RPM	Power Prtd watts	Inertia (J _m) Kg·cm ² (lb·in·s ²)

Notes:

- ① Motor winding temperature rise, $\Delta T = 100^\circ \text{C}$, at 40°C ambient.
- ② Measured at 25°C .
- ③ Add parking brake if applicable for total inertia.
- ④ Brake motor adds 0.45 kg [1.0 lbs]
- ⑤ Shaft seal increases Static Friction by 0.020 Nm [0.21 lb-in]
- ⑥ This value is calculated from the Torque Constant and Resistance. Refer to those values and notes ① & ② for additional details.

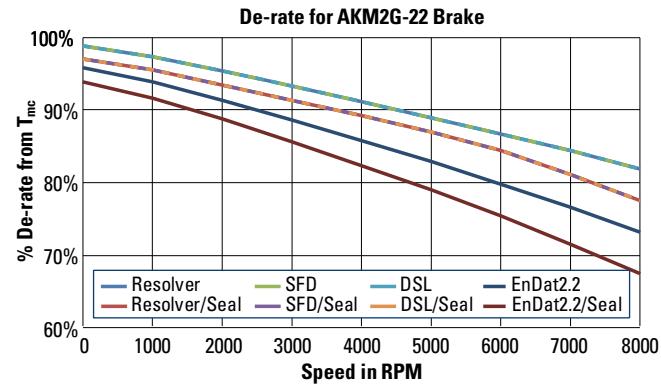

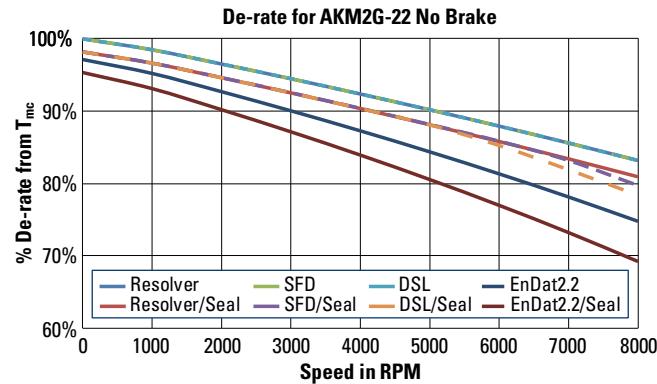

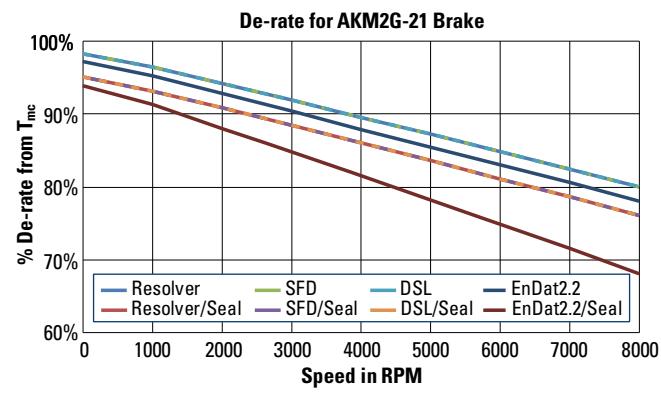

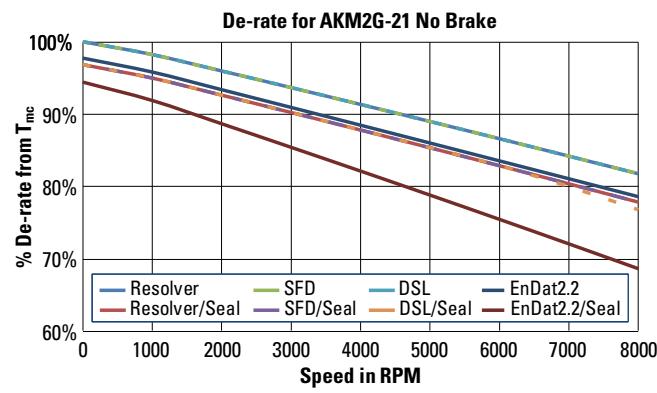

*Complete AKM2G series model nomenclature can be found on page 66.

AKM2G-2x De-rate Curves*

De-rate is calculated by multiplying the torque value (T_{mc}) by the percentage De-rate for the appropriate feedback either with or without shaft seal at the desired speed point. Also, use the correct De-rate graph for the motor based on whether it will have a brake or no brake. Refer to De-rate Calculations in the AKM2G Systems Overview on page 11 for additional details about De-rate calculations.

Example:

For an AKM2G-21 motor with an SFD feedback with shaft seal and no brake operating at 3000 RPM there is a 10.1% De-rate. Multiply the motor torque value (T_{mc}) by .899 for the rated torque at 3000 RPM. For ease of interpretation of the graph using a De-rate that is a rounded approximation is acceptable. For exact values refer to Kollmorgen's Motioneering Application Sizing programs, or the Kollmorgen website Performance Curve Generator.

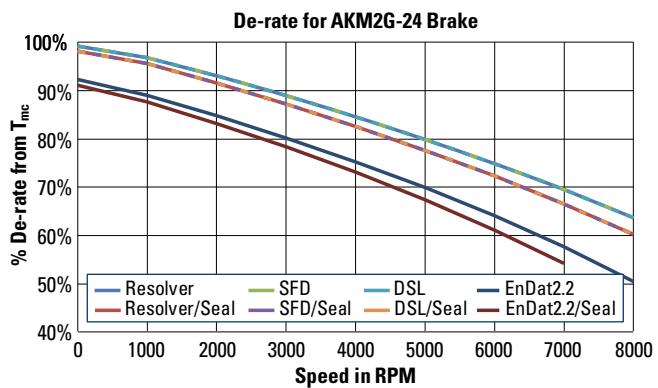

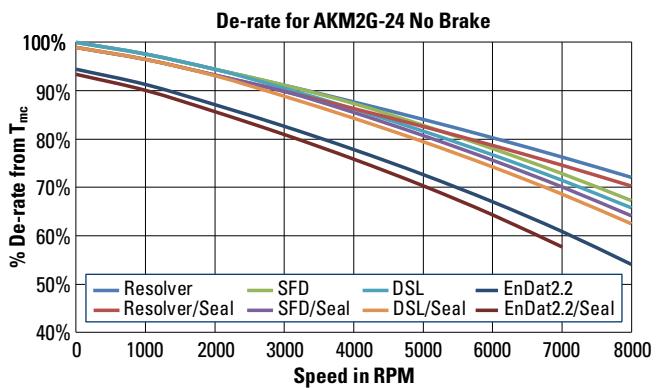

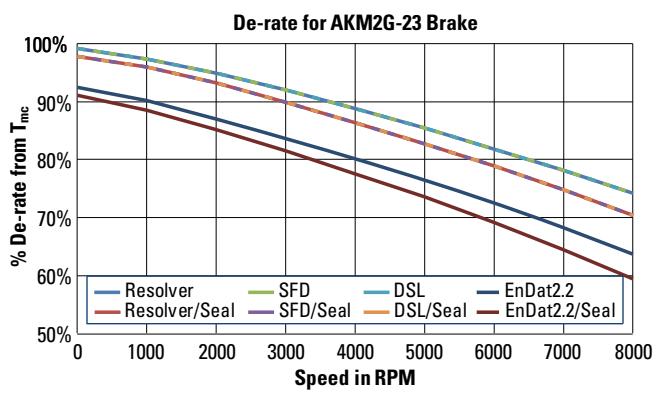

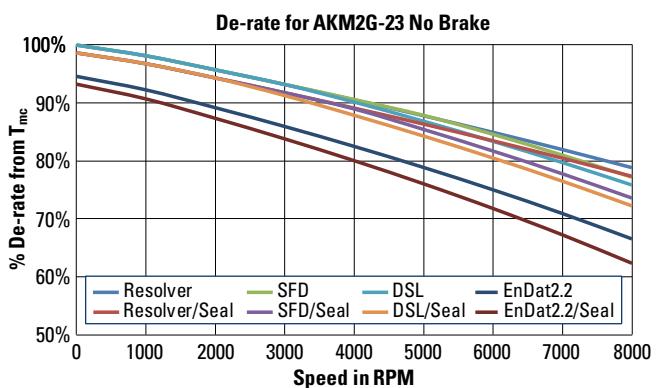

Continued on following page

* De-rate information for general estimation only. Use the on-line Performance Curve Generator located at <http://pcgh.kollmorgen.com/> for the most accurate information for your motor, or refer to Kollmorgen's Motioneering Software Tool available for download at <https://www.kollmorgen.com/en-us/service-and-support/technical/motioneering/motioneering/>

Notes:

- ① Motor winding temperature rise, $\Delta T = 100^\circ \text{C}$, at 40°C ambient.
- ② Measured at 25°C .
- ③ Add parking brake if applicable for total inertia.
- ④ Brake motor adds 0.72 kg [1.6 lbs]
- ⑤ Shaft seal increases Static Friction by 0.017 Nm [0.15 lb-in]
- ⑥ This value is calculated from the Torque Constant and Resistance. Refer to those values and notes ① & ② for additional details.

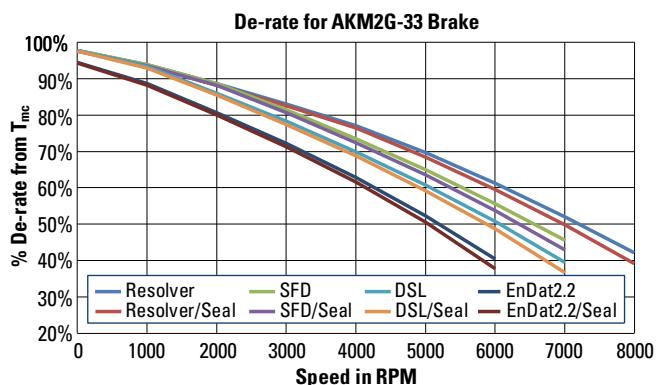

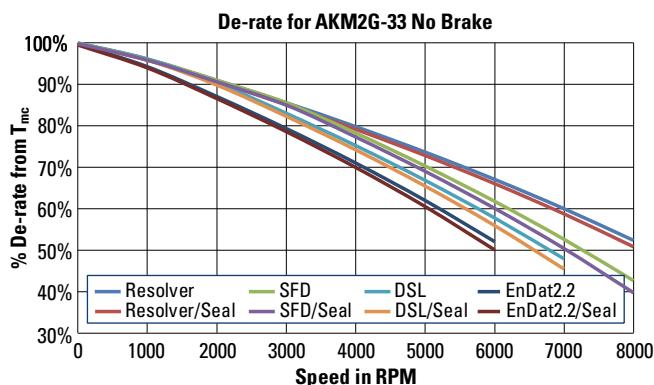

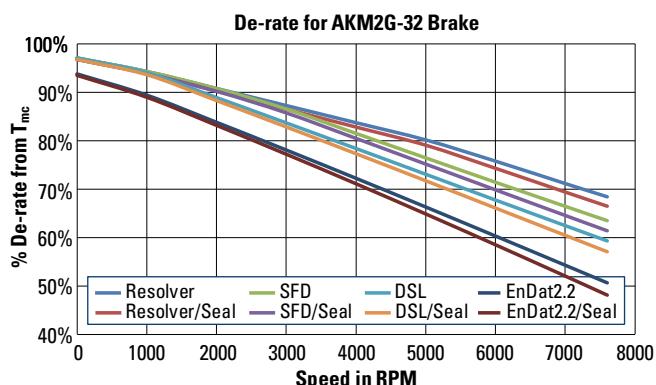

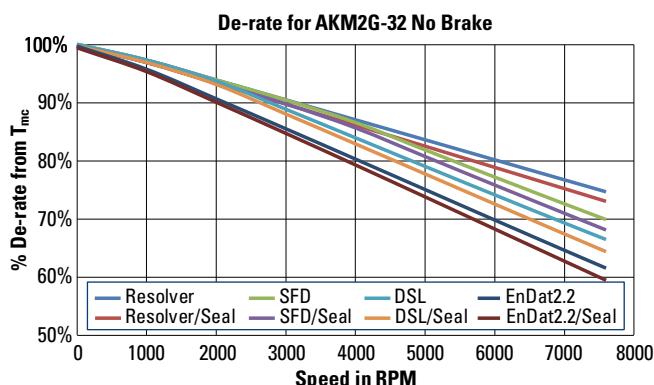

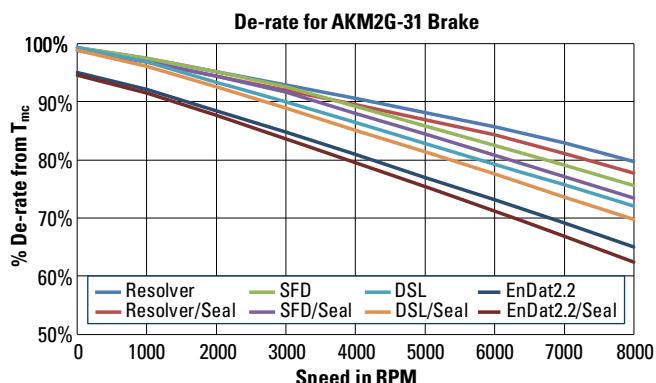

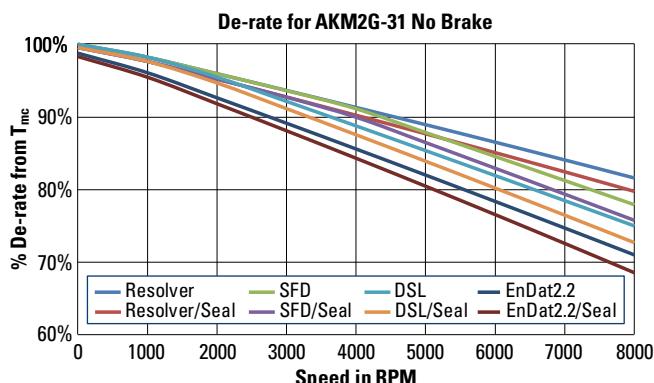

*Complete AKM2G series model nomenclature can be found on page 66.

AKM2G-3x De-rate Curves*

De-rate is calculated by multiplying the torque value (T_{mc}) by the percentage De-rate for the appropriate feedback either with or without shaft seal at the desired speed point. Also, use the correct De-rate graph for the motor based on whether it will have a brake or no brake. Refer to De-rate Calculations in the AKM2G Systems Overview on page 11 for additional details about De-rate calculations.

Example:

For an AKM2G-31 motor with an SFD feedback with shaft seal and no brake operating at 3000 RPM there is a 7.3% De-rate. Multiply the motor torque value (T_{mc}) by .927 for the rated torque at 3000 RPM. For ease of interpretation of the graph using a De-rate that is a rounded approximation is acceptable. For exact values refer to Kollmorgen's Motoneering Application Sizing programs, or the Kollmorgen website Performance Curve Generator.

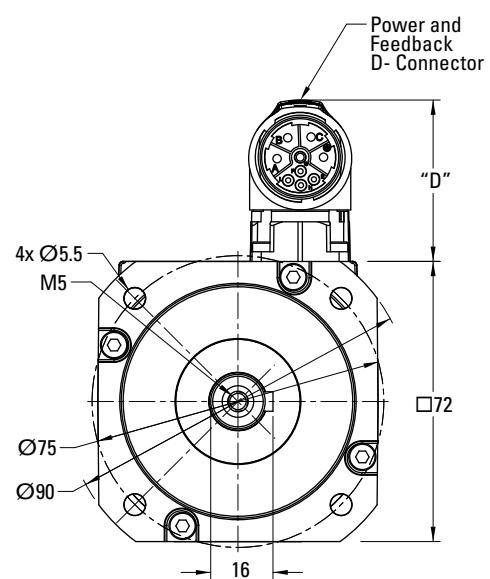

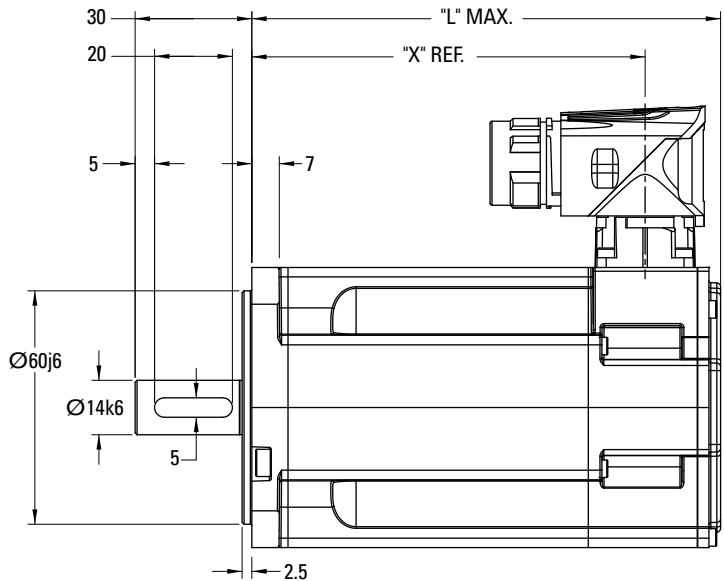

* De-rate information for general estimation only. Use the on-line Performance Curve Generator located at <http://pcgh.kollmorgen.com/> for the most accurate information for your motor, or refer to Kollmorgen's Motoneering Software Tool available for download at <https://www.kollmorgen.com/en-us/service-and-support/technical/motoneering/motoneering/>

Notes:

- ① Motor winding temperature rise, $\Delta T = 100^\circ \text{C}$, at 40°C ambient.
- ② Measured at 25°C .
- ③ Add parking brake if applicable for total inertia.
- ④ Brake motor adds 1.36 kg [3.0 lbs]
- ⑤ Shaft seal increases Static Friction by 0.023 Nm [0.20 lb-in]
- ⑥ This value is calculated from the Torque Constant and Resistance. Refer to those values and notes ① & ② for additional details.

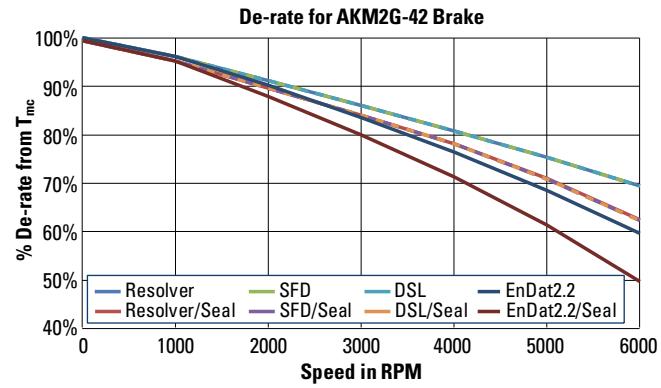

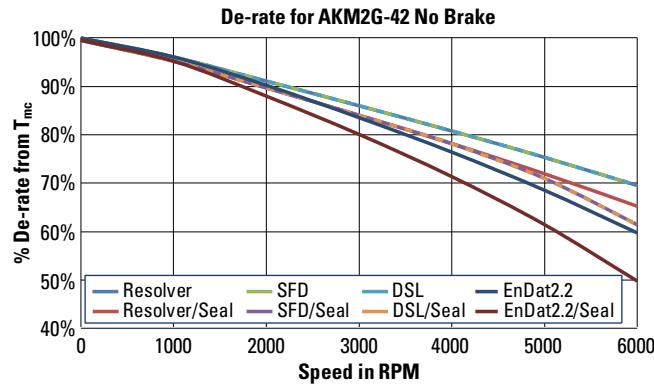

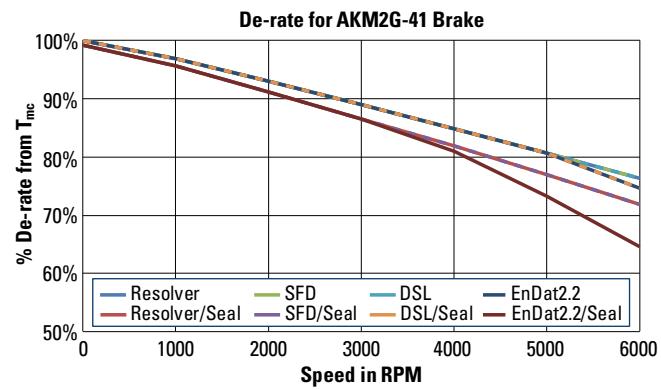

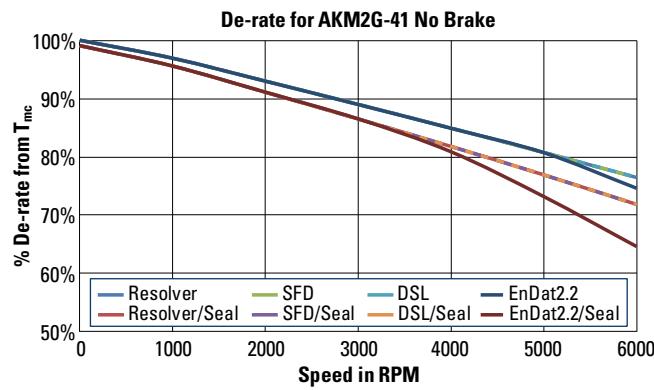

*Complete AKM2G series model nomenclature can be found on page 66.

AKM2G-4x De-rate Curves*

De-rate is calculated by multiplying the torque value (T_{mc}) by the percentage De-rate for the appropriate feedback either with or without shaft seal at the desired speed point. Also, use the correct De-rate graph for the motor based on whether it will have a brake or no brake. Refer to De-rate Calculations in the AKM2G Systems Overview on page 11 for additional details about De-rate calculations.

Example:

For an AKM2G-41 motor with an SFD feedback with shaft seal and no brake operating at 3000 RPM there is a 13.5% De-rate. Multiply the motor torque value (T_{mc}) by .865 for the rated torque at 3000 RPM. For ease of interpretation of the graph using a De-rate that is a rounded approximation is acceptable. For exact values refer to Kollmorgen's Motioneering Application Sizing programs, or the Kollmorgen website Performance Curve Generator.

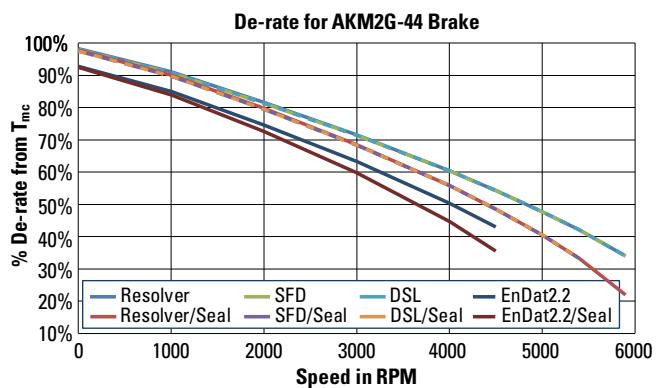

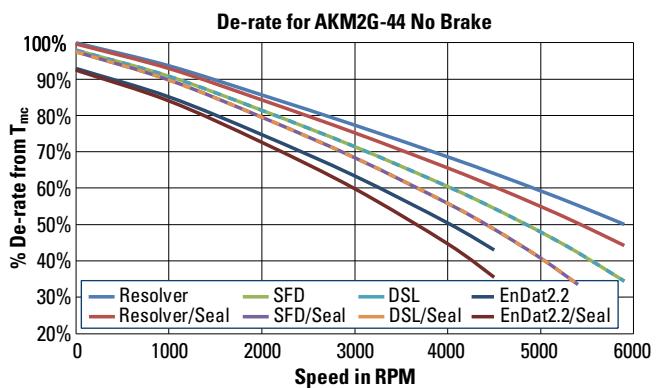

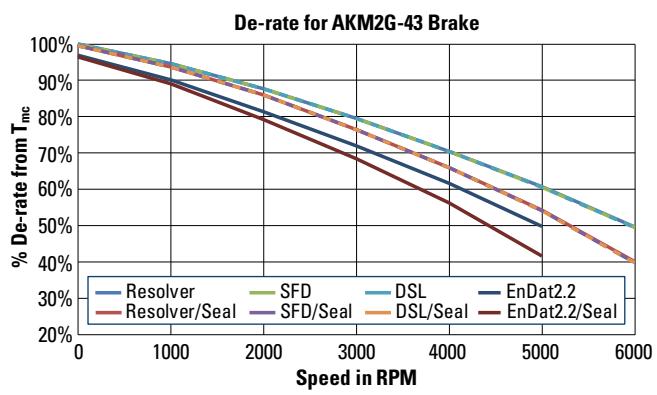

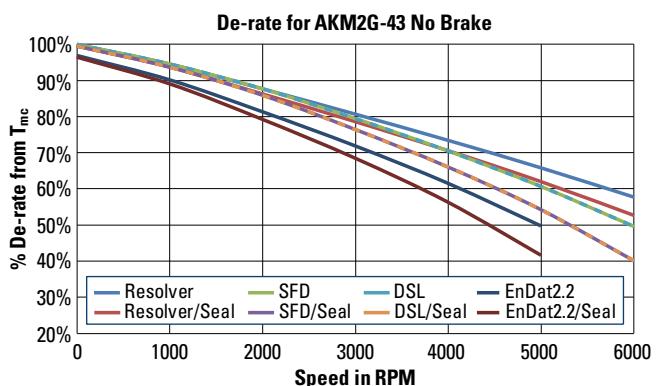

[Continued on following page](#)

Notes:

- ① Motor winding temperature rise, $\Delta T = 100^\circ \text{ C}$, at 40° C ambient.
- ② Measured at 25° C .
- ③ Add parking brake if applicable for total inertia.
- ④ Brake motor adds 2.6 kg [5.7 lbs]
- ⑤ Shaft seal increases Static Friction by 0.07 Nm [0.62 lb-in]
- ⑥ This value is calculated from the Torque Constant and Resistance. Refer to those values and notes ① & ② for additional details.

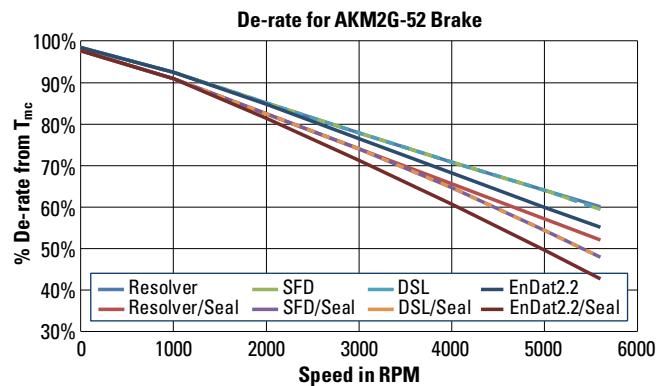

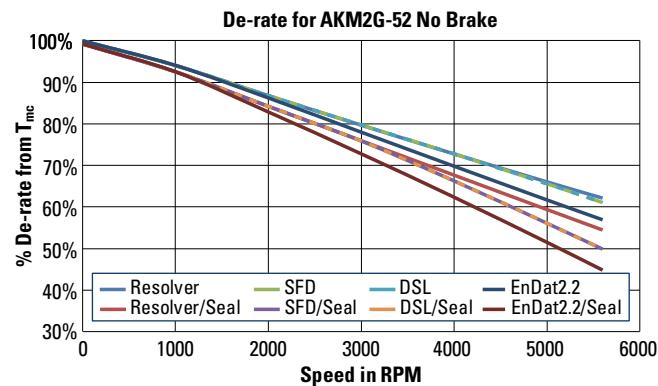

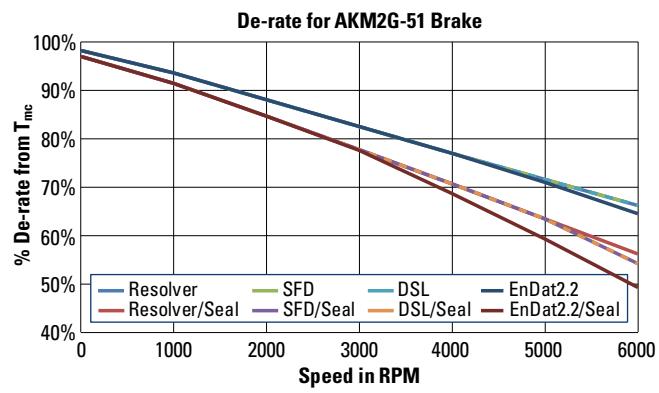

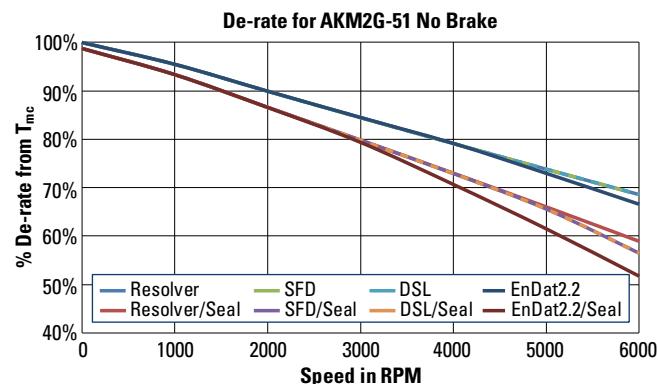

*Complete AKM2G series model nomenclature can be found on page 66.

AKM2G-5x De-rate Curves*

De-rate is calculated by multiplying the torque value (T_{mc}) by the percentage De-rate for the appropriate feedback either with or without shaft seal at the desired speed point. Also, use the correct De-rate graph for the motor based on whether it will have a brake or no brake. Refer to De-rate Calculations in the AKM2G Systems Overview on page 11 for additional details about De-rate calculations..

Example:

For an AKM2G-51 motor with an SFD feedback with shaft seal and no brake operating at 3000 RPM there is a 19.1% De-rate. Multiply the motor torque value (T_{mc}) by .809 for the rated torque at 3000 RPM. For ease of interpretation of the graph using a De-rate that is a rounded approximation is acceptable. For exact values refer to Kollmorgen's Motioneering Application Sizing programs, or the Kollmorgen website Performance Curve Generator.

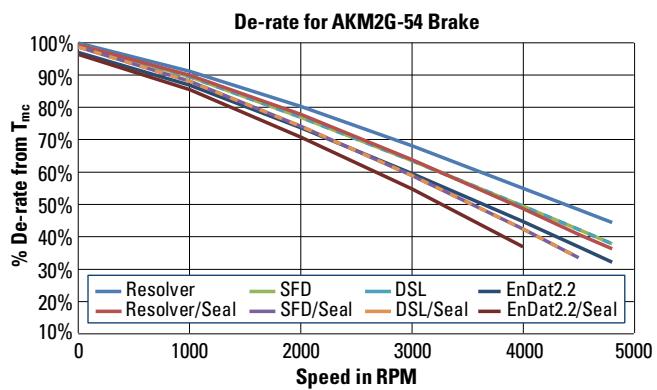

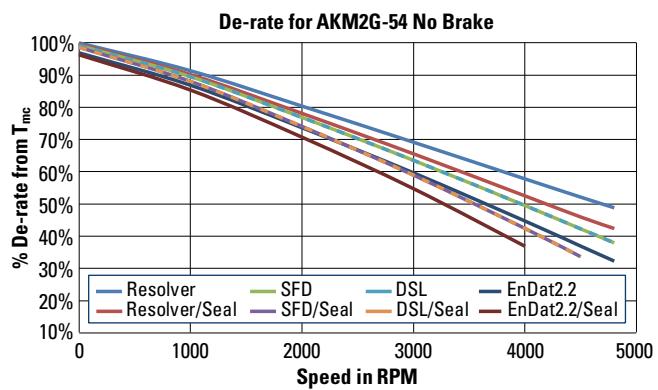

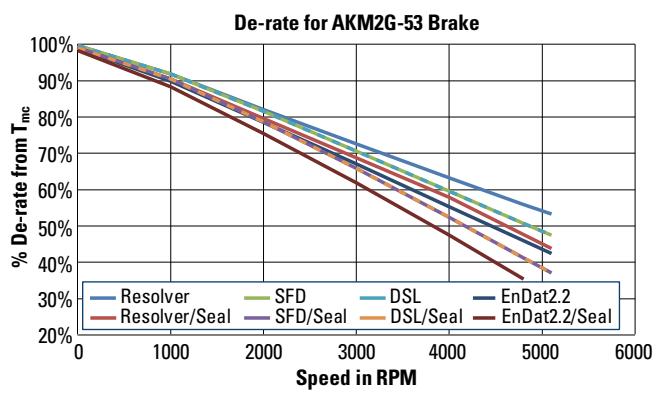

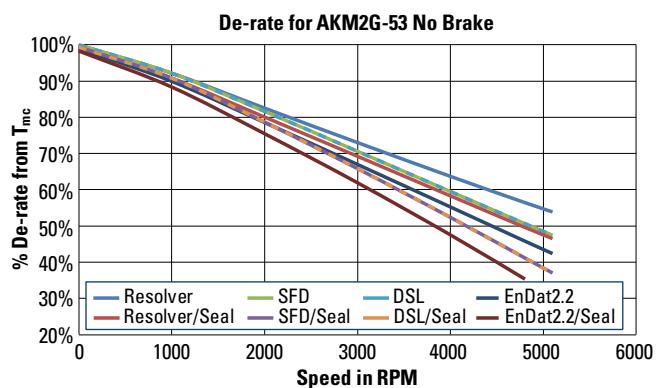

Continued on following page

* De-rate information for general estimation only. Use the on-line Performance Curve Generator located at <http://pcgh.kollmorgen.com/> for the most accurate information for your motor, or refer to Kollmorgen's Motioneering Software Tool available for download at <https://www.kollmorgen.com/en-us/service-and-support/technical/motioneering/motioneering/>

Notes:

- ① Motor winding temperature rise, $\Delta T = 100^\circ \text{ C}$, at 40° C ambient.
- ② Measured at 25° C .
- ③ Add parking brake if applicable for total inertia.
- ④ Brake motor adds 4.5 kg [10.0 lbs]
- ⑤ Shaft seal increases Static Friction by 0.12 Nm [1.06 lb-in]
- ⑥ This value is calculated from the Torque Constant and Resistance. Refer to those values and notes ① & ② for additional details.

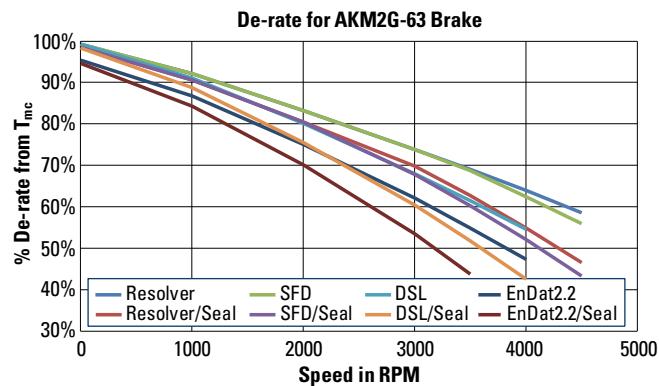

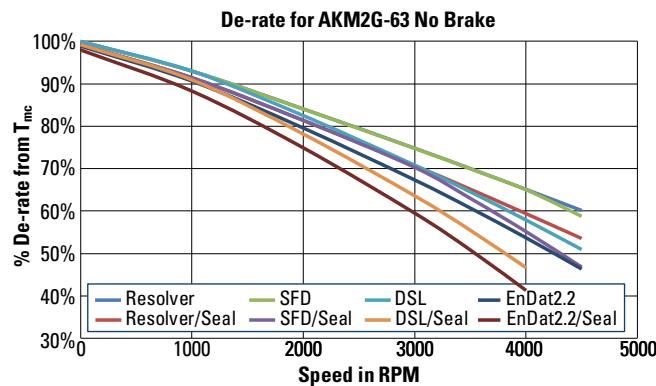

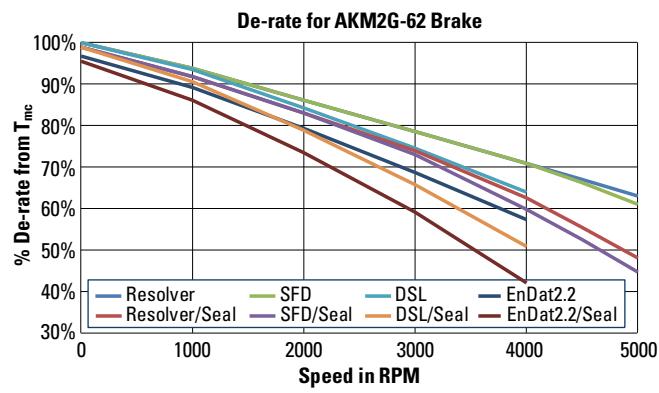

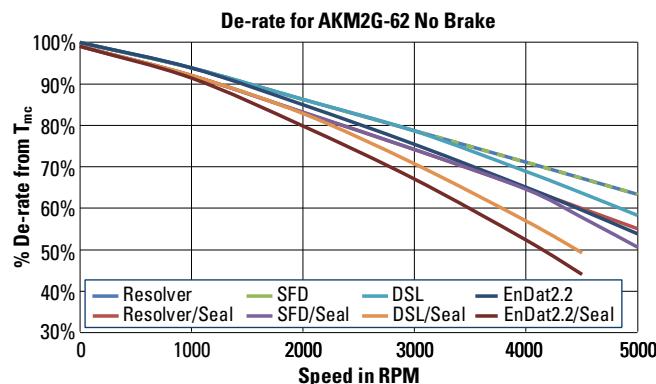

*Complete AKM2G series model nomenclature can be found on page 66.

AKM2G-6x De-rate Curves*

De-rate is calculated by multiplying the torque value (T_{mc}) by the percentage De-rate for the appropriate feedback either with or without shaft seal at the desired speed point. Also, use the correct De-rate graph for the motor based on whether it will have a brake or no brake. Refer to De-rate Calculations in the AKM2G Systems Overview on page 11 for additional details about De-rate calculations.

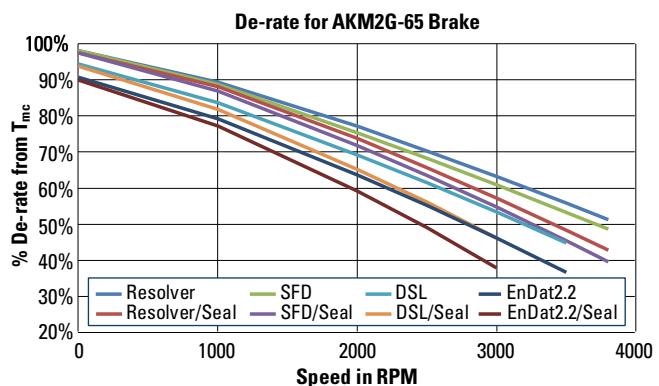

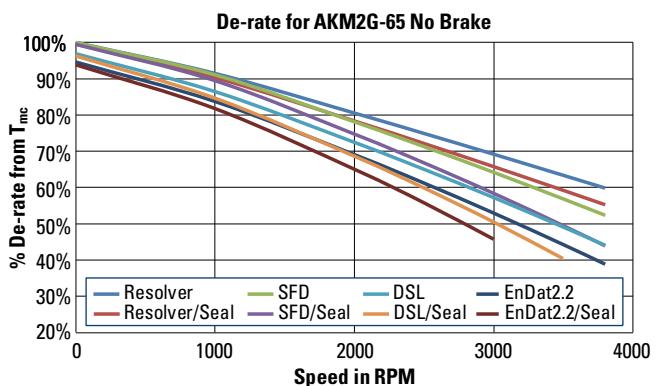

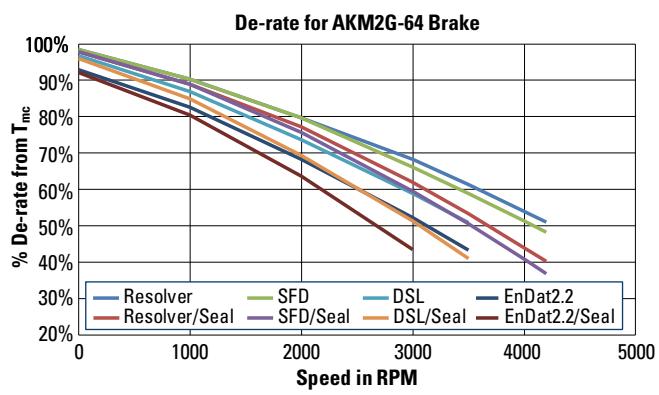

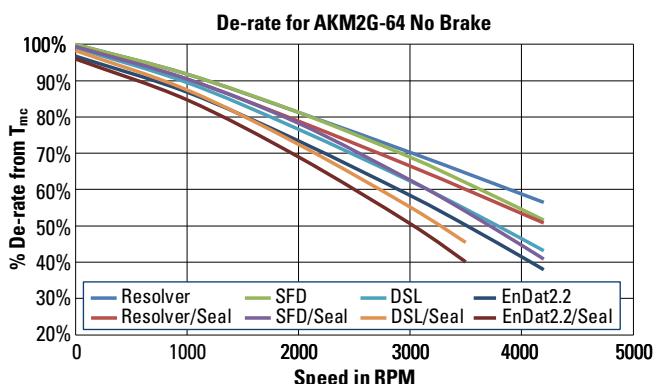

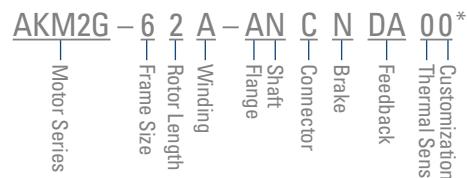

Example:

For an AKM2G-62 motor with an SFD feedback with shaft seal and no brake operating at 3000 RPM there is a 25.8% De-rate. Multiply the motor torque value (T_{mc}) by .742 for the rated torque at 3000 RPM. For ease of interpretation of the graph using a De-rate that is a rounded approximation is acceptable. For exact values refer to Kollmorgen's Motioneering Application Sizing programs, or the Kollmorgen website Performance Curve Generator.

Continued on following page

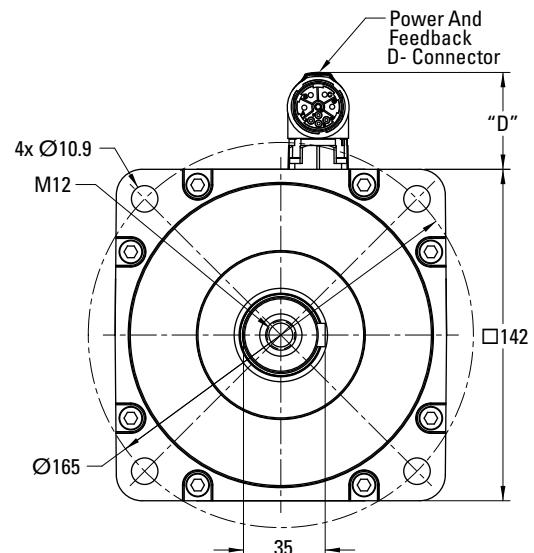

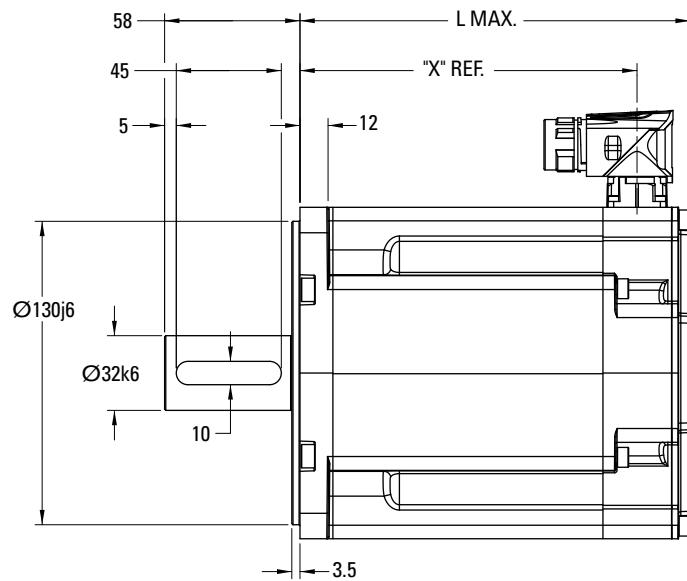

* De-rate information for general estimation only. Use the on-line Performance Curve Generator located at <http://pcgh.kollmorgen.com/> for the most accurate information for your motor, or refer to Kollmorgen's Motioneering Software Tool available for download at <https://www.kollmorgen.com/en-us/service-and-support/technical/motioneering/motioneering/>

*Complete AKM2G series model nomenclature can be found on page 66.

Notes:

- ① Motor winding temperature rise, $\Delta T = 100^\circ \text{C}$, at 40°C ambient.
- ② Measured at 25°C .
- ③ Add parking brake if applicable for total inertia.
- ④ Brake motor adds 9.1 kg [20 lbs]
- ⑤ Shaft seal increases Static Friction by 0.25 Nm [2.2 lb-in]
- ⑥ This value is calculated from the Torque Constant and Resistance. Refer to those values and notes ① & ② for additional details.

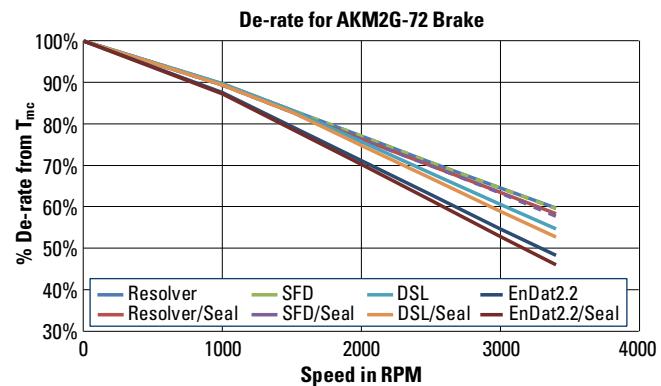

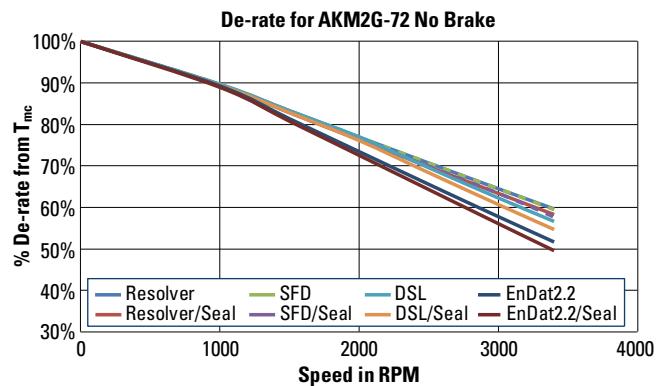

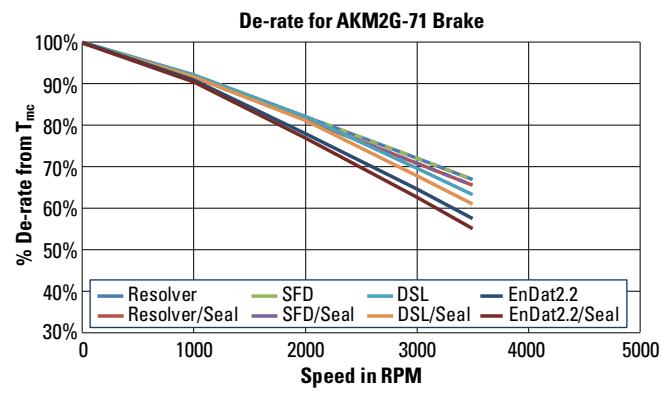

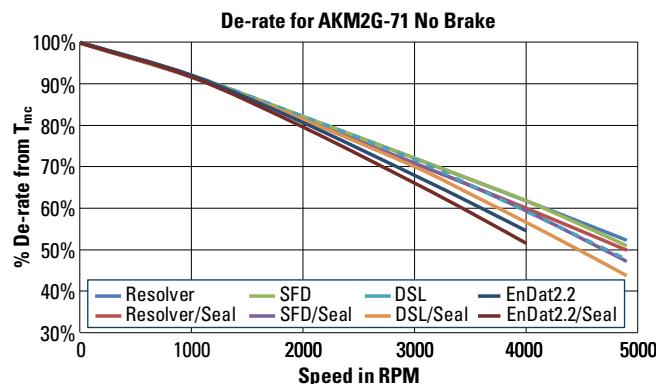

*Complete AKM2G series model nomenclature can be found on page 66.

AKM2G-7x De-rate Curves*

De-rate is calculated by multiplying the torque value (T_{mc}) by the percentage De-rate for the appropriate feedback either with or without shaft seal at the desired speed point. Also, use the correct De-rate graph for the motor based on whether it will have a brake or no brake. Refer to De-rate Calculations in the AKM2G Systems Overview on page 11 for additional details about De-rate calculations.

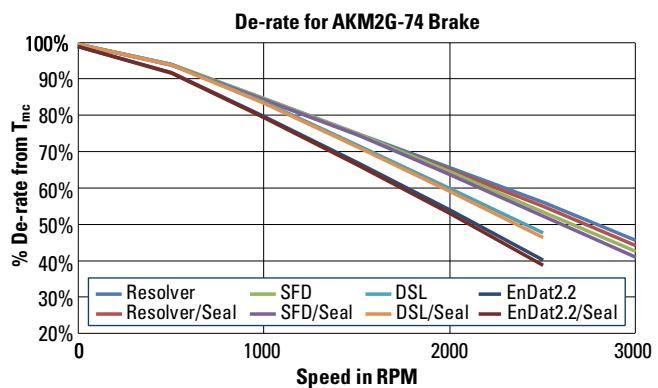

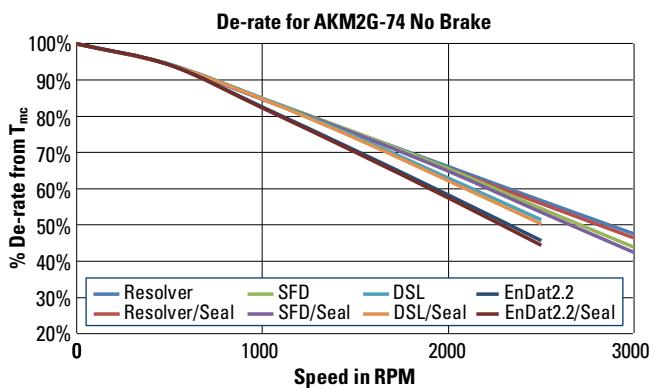

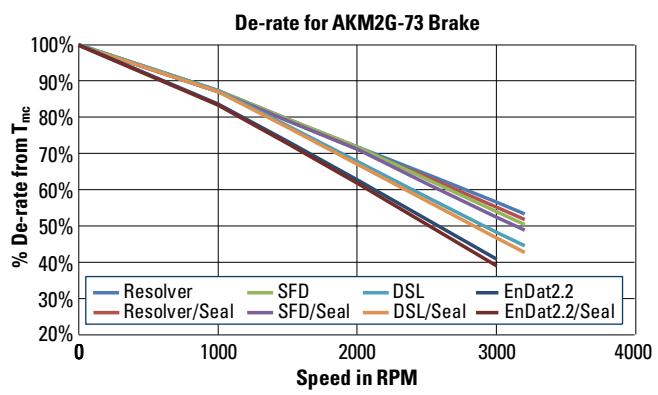

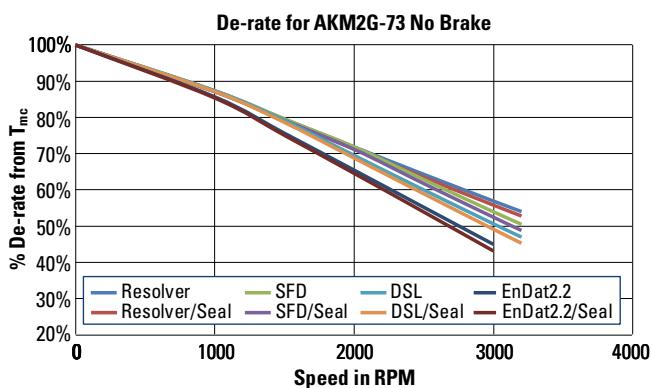

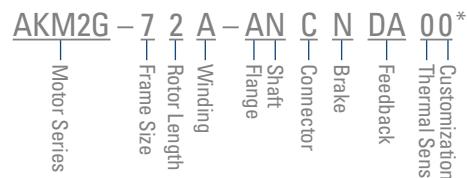

Example:

For an AKM2G-71 motor with an SFD feedback with shaft seal and no brake operating at 3000 RPM there is a 24.8% De-rate. Multiply the motor torque value (T_{mc}) by .752 for the rated torque at 3000 RPM. For ease of interpretation of the graph using a De-rate that is a rounded approximation is acceptable. For exact values refer to Kollmorgen's Motioneering Application Sizing programs, or the Kollmorgen website Performance Curve Generator.

Continued on following page

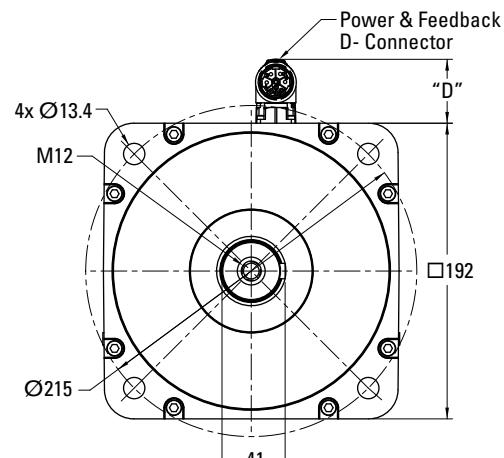

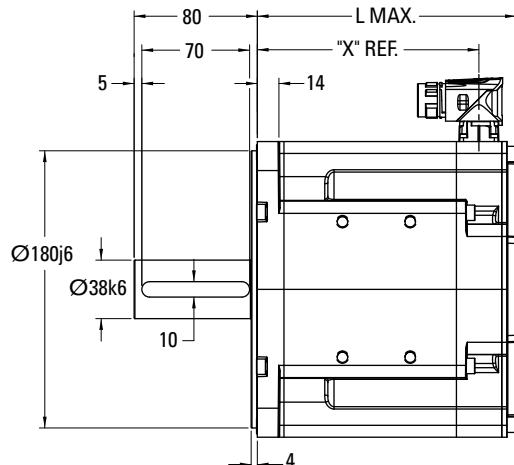

* De-rate information for general estimation only. Use the on-line Performance Curve Generator located at <http://pcgh.kollmorgen.com/> for the most accurate information for your motor, or refer to Kollmorgen's Motioneering Software Tool available for download at <https://www.kollmorgen.com/en-us/service-and-support/technical/motioneering/motioneering/>

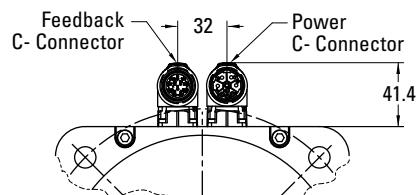

*Complete AKM2G series model nomenclature can be found on page 66.

L10 Bearing Fatigue and Shaft Loading

L10 Bearing Fatigue and Shaft Loading

Shaft Loading

Motor	Max. Radial Force (N)	Max. Axial Force (N)
AKM2G-2	195	600
AKM2G-3	340	600
AKM2G-4	560	1400
AKM2G-5	890	1740
AKM2G-6	2000	2200
AKM2G-7	2670	3000

The maximum radial load ratings reflect the following assumptions:

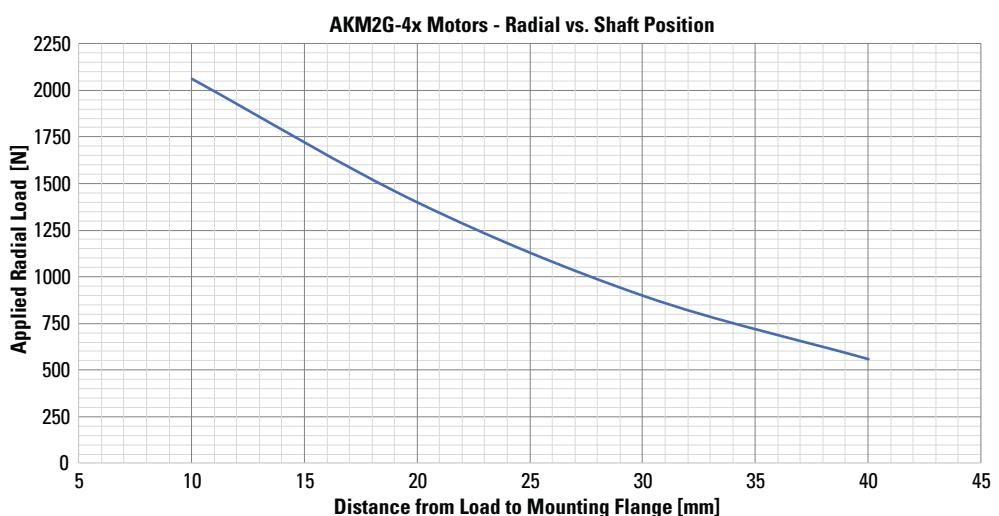

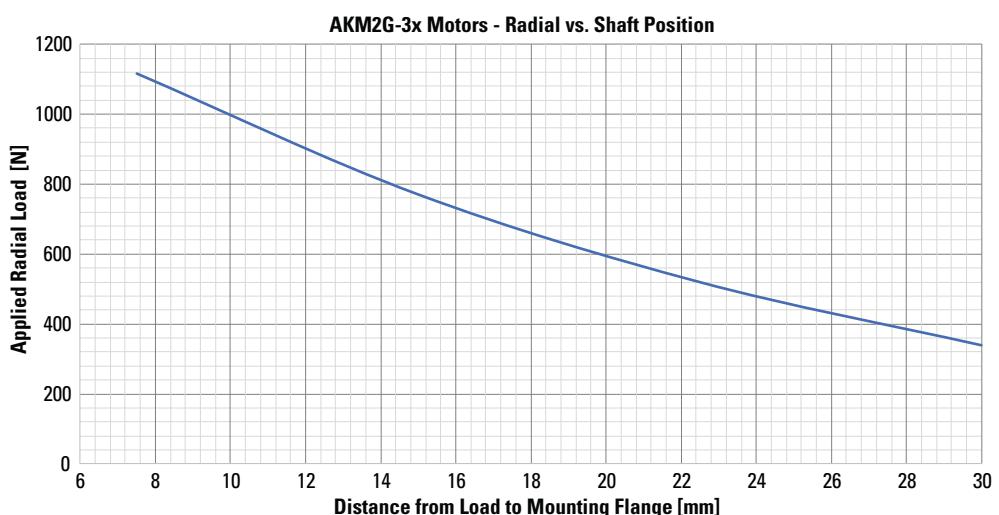

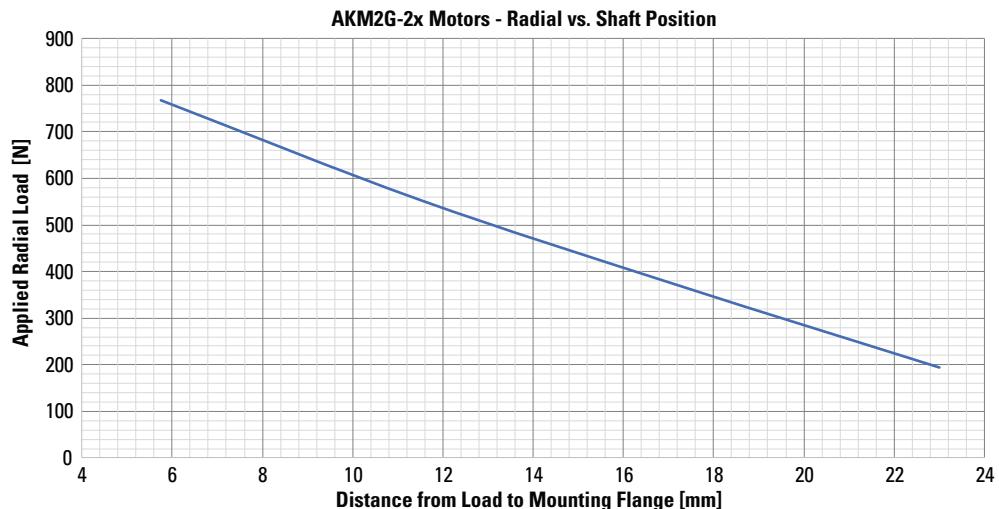

1. Motors are operated with peak torque of the longest member of the frame size.
2. Fully reversed load applied to the end of the smallest diameter standard mounting shaft extension.
3. Infinite life with 99% reliability.
4. Safety factor = 2.

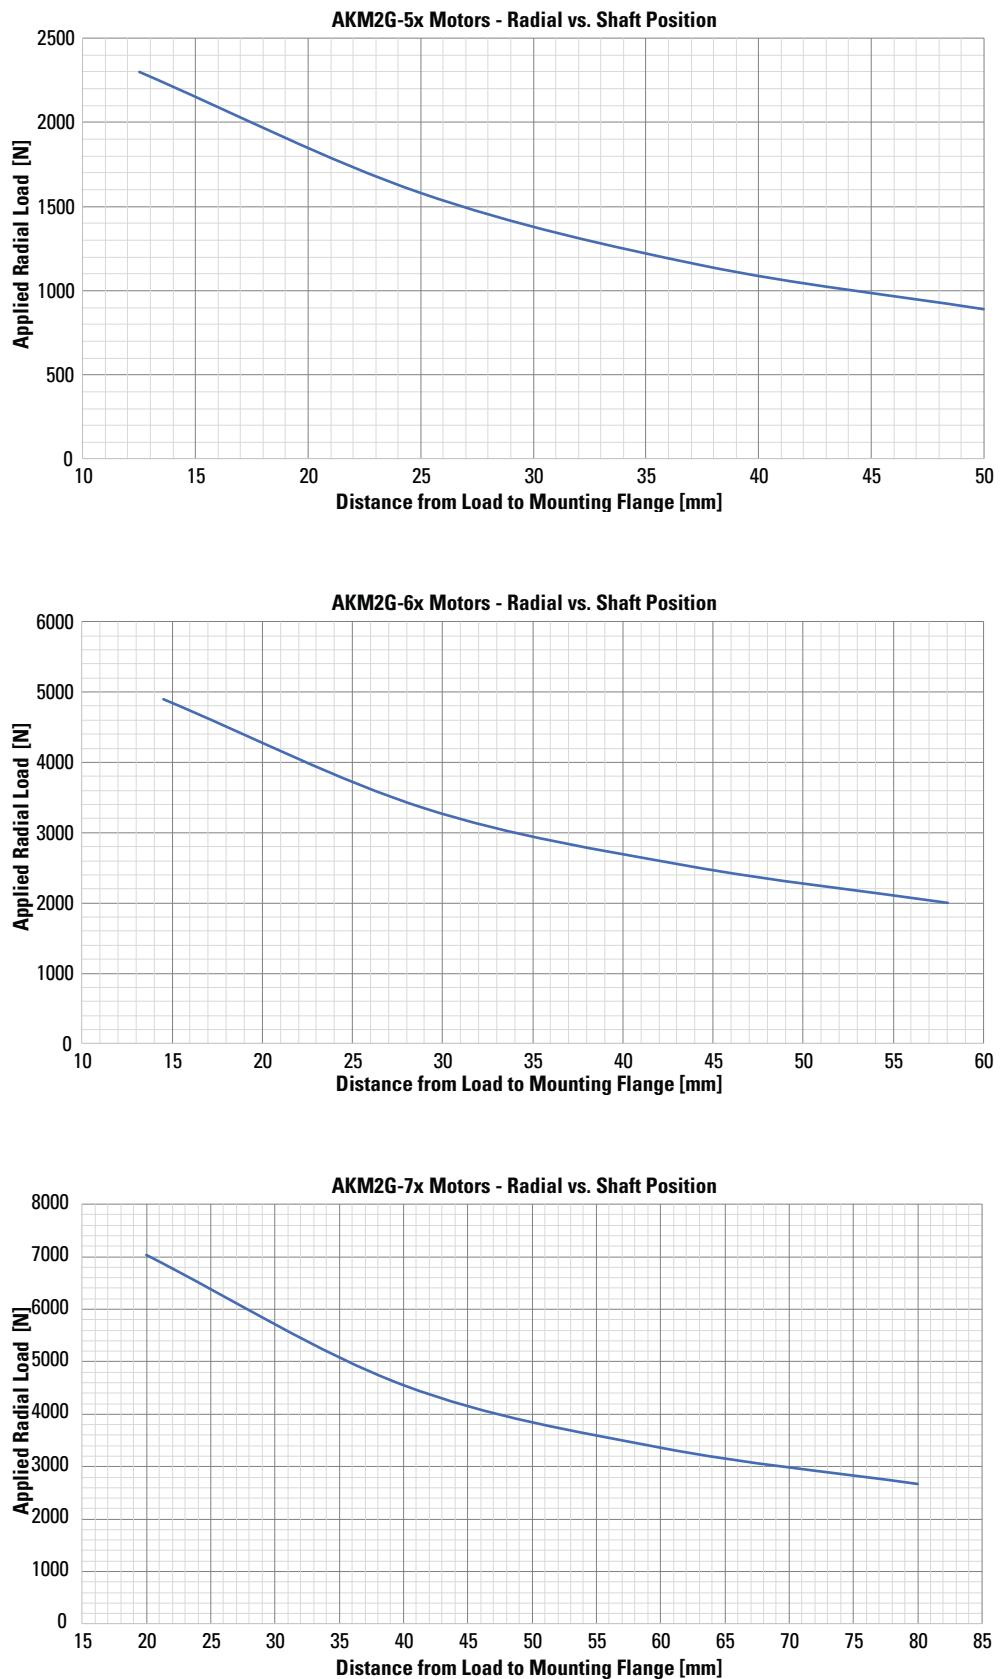

Mineral-filled PTFE Teflon® Shaft Seals

There is a normal break-in period for our Mineral-filled PTFE Teflon® shaft seals. Best conditions during the break-in period would be at the operational temperature and speed that would be typical for the application.

During the break-in period, some "shedding" of mineral-filled PTFE Teflon material is normal. The debris is not a sign of seal deterioration or failure. The material "shed" should be reduced with usage.

Typically, a few hours at operational speed is enough to break-in the shaft seal.

Thermal Sensor Protective Devices

The standard version of each motor is fitted with an electrically isolated PT-1000+ PTC. The thermal sensors do not provide any protection against short, heavy overloading.

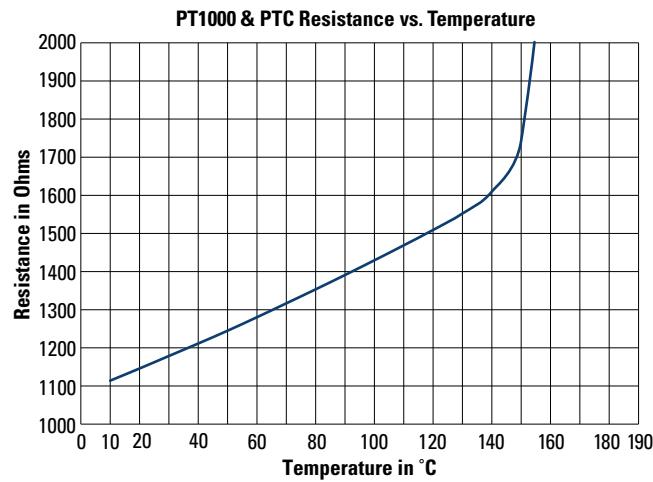

The motor can be delivered with a PT-1000, PTC, or KTY 84-130 equivalent sensors optionally (see Thermal Sensor options 1, 2, 3).

With digital feedback systems SFD3 (CA), Hiperface DSL (GU) and EnDat 2.2 (LD) the temperature sensor status is transmitted digitally and evaluated in the drive.

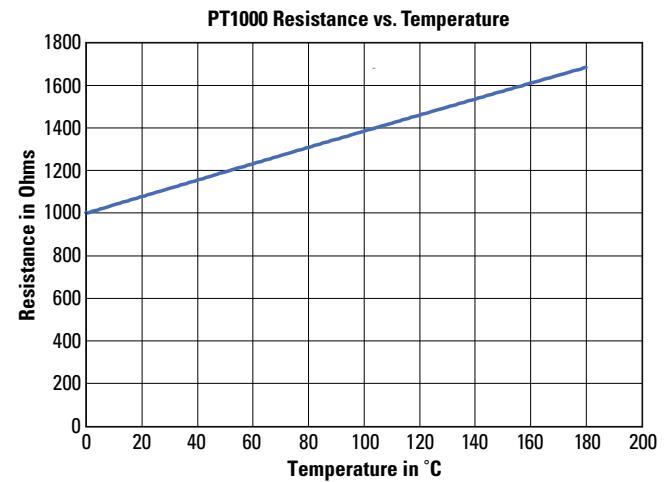

Provided that our configured feedback cables are used, the sensor is integrated into the monitoring system of the digital servo amplifiers.

AKM2G Servo Motor Feedback Summary with AKD Family Servo Drives

Feedback Device	Motor ID Support ³	Type	Compatible AKM2Gx	Accuracy ^{1,2} (arc-sec)	RMS Noise ¹ (arc-sec)	Resolution	Absolute Revs
SFD3 (CA)	Yes	Inductive	AKM2G 2-7	±585"	±9.9"	24 bits	1
HIPERFACE DSL®(GU)	Yes	Capacitive	AKM2G 2-7	±240"	±20"	17 bits	4096
EnDat® 2.2 (LD)	Yes	Inductive	AKM2G 2,3,4 AKM2G 5,6,7	±120" ±65"	See Note 4	19 bits	4096
Resolver (R-)	No	Inductive	AKM2G 2-7	±540"		24 bits for AKD/AKD2G	1

Note 1: AKD/AKD2G drives have a resolver measurement accuracy of ±45", for a drive w/ motor accuracy of ±585" and RMS Noise of ±9.9".

Note 2: Accuracy refers to overall system accuracy once installed in the motor. Noise refers to the RMS position noise when at stand-still.

Note 3: Motor ID support means electronic motor nameplate data is included, allowing for plug-and-play commissioning.

Note 4: At the time of printing, this information was not available. Please contact Kollmorgen Customer Support for the latest update.

With AKD and AKD2G drives, all received positions are interpolated to a 32-bit resolution per revolution.

Servo Motor Feedback Combinations

AKM2G Family of Servo Motors with Smart Feedback Device, Gen 3 (SFD3)

The SFD3 Feedback uses a single motor cable, requiring just one cable between the drive and motor. The feedback has both power and communication on a single wire pair, reducing overall wiring costs. In addition, the device includes onboard memory for an electronic motor datasheet.

Angle Measurement:

Resolution: 24 bits
 Accuracy: $< \pm 45$ arc-sec electrical + sensor error
 Size 15 sensor ± 9 arc-min net (AKM2G 2,3,4)
 Size 21 sensor ± 9 arc-min net (AKM2G 5,6,7)
 Electrical noise: $< 2^{17}$ Rev rms at full bandwidth
 Bandwidth: > 2000 Hz at -3 dB
 > 1000 Hz at -45° phase lag
 Max tracking rate: $> 50,000$ RPM
 Velocity ripple: $< 0.2\%$ p-p electronics only
 Size 15 sensor $< 1.5\%$ p-p net (AKM2G 2,3,4)
 Size 21 sensor $< 1.5\%$ p-p net (AKM2G 5,6,7)
 Velocity noise: < 4 RPM rms at full bandwidth

Digital Communications:

Baud rate: 2.5 MBaud
 Signaling: RS-485 differential using differential Manchester encoding
 Update period: New position sample every 51.28 μ s
 Error detection: 5 bit CRC and running parity check

Power Supply:

Supply at drive: any between 7 V - 12 V accepted
 Nominal supply current: 120 mA
 Worst case supply: 150 mA

Environmental:

Operating ambient: -20 to 120° C
 Humidity: 10% to 90% non-condensing
 Storage temperature: -40 to 135° C

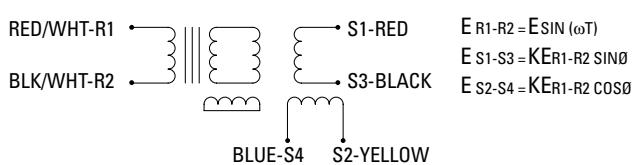

Resolver (Feedback)

Resolver Data	Units	AKM2G 2, 3, 4	AKM2G 5, 6, 7

Brake Option

Failsafe, Holding Brake

The holding brake is designed to provide static holding torque to the motor shaft with the brake coil de-energized. The brake must first be released (coil energized) prior to commanding motor rotation as determined by its drop-out time. The brake is intended for holding or “parking” of a stationary motor. It is not intended for dynamic braking. There should be absolutely no motion of the rotor when power is removed from the brake coil.

Contamination of the motor internal compartment by oil or other foreign materials will result in failure of the brake. Check the suitability of motor sealing for the working environment.

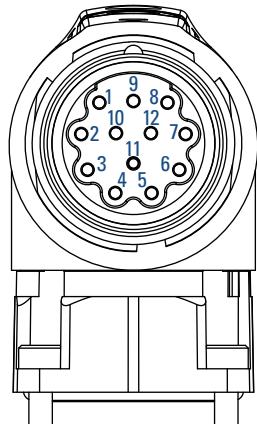

Note 1: Operating Voltage: 24 Vdc ± 10%.

Note 2: Maximum backlash is calculated using worst-case tolerancing, and typical backlash is calculated using statistical tolerancing.

		H	AKM2G7 > 20A													

Note 1: AKD/AKD2G drives have a resolver measurement accuracy of $\pm 45''$, for a drive w/ motor accuracy of $\pm 585''$ and RMS Noise of $\pm 9.9''$.

Note 2: Accuracy refers to overall system accuracy once installed in the motor. Noise refers to the RMS position noise when at stand-still.

Note 3: Motor ID support means electronic motor nameplate data is included, allowing for plug-and-play commissioning.

Note 4: At the time of printing, this information was not available. Please contact Kollmorgen Customer Support for the latest update.

With AKD and AKD2G drives, all received positions are interpolated to a 32-bit resolution per revolution.

AKD®2G Servo Drive

The newest member of the AKD family is our most powerful yet. Along with increased power, the AKD2G is simplified and includes integrated Safe Motion that increases Ease-of-Use

The new AKD2G servo drive introduces the Kollmorgen Servo-on-a-Chip:
A powerful compute engine that can control 2 axes simultaneously and up to 28 I/O. While we were at it, we streamlined the design by optimizing the AKD2G for single-cable motors.

Dual-Axis AKDG2 Servo Drive

The Benefits of AKD®2G Servo Drive

- Flexible
 - One and two axis variants available
 - Modular design allows the user to specify only the features needed
 - Supports a variety of feedback devices—SFD & HIPERFACE® DSL standard;
 - optional feedbacks include EnDat2.2, BiSS 1.0, Analog Sine/Cos encoder, incremental encoder, resolver and more
 - Multiple bus choices for system optimization, including EtherCAT®, and CANopen®
 - SIL-qualified over-voltage, current, and temperature detection provided for added dependability
 - Dual-channel STO for each axis
 - Industry-leading power density for greater flexibility in mounting
 - Fits into a 10" deep control panel
- Easy to Use
 - Plug-and-play compatibility with Kollmorgen controls and motors
 - WorkBench GUI, acclaimed for customer experience and usability
 - Hybrid Motor-Power connector is optimized for single-cable motors:
 - No adaptors, no D-subs, no splitters
 - Cage-clamp spring terminal connectors on I/O allow for fast and easy installation
 - Optically-isolated I/O reduces noise, and eliminates need for additional hardware
- Fast
 - Accommodates changing load conditions immediately:
 - Current loop updates in 1.28 µs, nearly 50x the speed of our nearest competitors
 - Velocity and position loops lead the market at 62.5 µs and 125 µs, respectively
 - Servo on a Chip™ includes dual-core ARM™ A9, 800 MHz µP, 1.5 M gates
 - AI-based auto-tuning with a click of a button gets you started quickly
 - Wizard-based tuning uses advanced Bode Plot tool to help you efficiently manual-tune when desired
 - Fast data acquisition with TCP/IP Ethernet service channel

AKD® 2G Servo Drive

AKD® 2G Means Unparalleled Connectivity

Base Model:

The base model of Kollmorgen's AKD2G includes all of the performance described previously, and is optimized to interface to a single-connector motor with Kollmorgen's Smart Feedback or HIPERFACE® DSL. It also offers 16 I/O, 160x128-pixel graphical display, removable SD card, and your choice of motionbusses.

Extended I/O Variant

The extended I/O variant offers everything on the base model, plus I/O expansion.

This I/O expansion includes the 15-pin D-sub for legacy feedbacks or dual-loop operation; it also includes an additional 12 I/O for a total of 28 I/O. The options fit in the same package as the base model.

Dual-Axis AKD2G 480 Vac Dual-Axis AKD2G 240 Vac
(shown with optional feedback and I/O expansion)

Modes of Operation

- Analog (torque or velocity)
- Step-and-direction
- Programmable indexing
- Motionbus control

Note: For complete AKD model nomenclature, refer to page 80.

AKD® 2G Drive Connector Layout

Inputs and Outputs (I/O):

Base drive will offer:

- 1 x Analog Input
- 1 x Analog Output
- 8 x Digital Inputs (sinking), of which two (2) are high-speed
- 4 x Digital Outputs (sourcing)
- 1 x Relay Output, 24V @ 2A
- 1 x Two-channel STO

Optional I/O Expansion:

Drive with I/O expansion will offer:

- 2 x Analog Inputs
- 2 x Analog Outputs
- 12 x Digital Inputs (sinking), of which two (2) are high-speed
- 2 x "Open" Digital Outputs as volt-free pairs (sink/source 5V-24V), high speed
- 6 x Digital Outputs (sourcing)
- 2 x RS485-style Selectable Inputs or Outputs, 5V
- 1 x Relay Output, 24V @ 2A
- 1 x One-channel or Two-channel STO

AKD® Servo Drive

Our AKD series is a complete range of Ethernet-based servo drives that are fast, feature-rich, flexible and integrate quickly and easily into any application. AKD ensures plug-and-play commissioning for instant, seamless access to everything in your machine. And, no matter what your application demands, AKD offers industry-leading servo performance, communication options, and power levels, all in a smaller footprint.

This robust, technologically advanced family of drives delivers optimized performance when paired with our best-in-class components, producing higher quality results at greater speeds and more uptime. With Kollmorgen servo components, we can help you increase your machine's overall equipment effectiveness (OEE) by 50%.

The Benefits of AKD Servo Drive

- Optimized Performance in Seconds
 - Auto-tuning is one of the best and fastest in the industry
 - Automatically adjusts all gains, including observers
 - Immediate and adaptive response to dynamic loads
 - Precise control of all motor types
 - Compensation for stiff and compliant transmission and couplings
- Greater Throughput and Accuracy
 - Up to 27-bit-resolution feedback yields unmatched precision and excellent repeatability
 - Very fast settling times result from a powerful dual processor system that executes industry-leading and patent pending servo algorithms with high resolution
 - Advanced servo techniques such as high-order observer and bi-quad filters yield industry-leading machine performance
 - Highest bandwidth torque-and-velocity loops. Fastest digital current loop in the market
- Easy-to-use Graphical User Interface (GUI) for Faster Commissioning and Troubleshooting
 - Six-channel real-time software oscilloscope commissions and diagnoses quickly
 - Multi-function Bode Plot allows users to quickly evaluate performance
 - Auto-complete of programmable commands saves looking up parameter names
 - One-click capture and sharing of program plots and parameter settings allow you to send machine performance data instantly
 - Widest range of programming options in the industry
- Flexible and Scalable to Meet any Application
 - 3 to 48 Arms continuous current; 9 to 96 Arms peak
 - Very high power density enables an extremely small package
 - True plug-and-play with all standard Kollmorgen servo motors and actuators
 - Supports a variety of single and multi-turn feedback devices – Smart Feedback Device (SFD/SFD3), EnDat 2.2, EnDat 2.1, BiSS, analog Sine/Cos encoder, incremental encoder, HIPERFACE®, and resolver
 - Tightly integrated Ethernet motion buses without the need to add large hardware: EtherCAT®, SynqNet®, Modbus® TCP, EtherNet/IP™, PROFINET® RT, SERCOS® III, and CANopen®
 - Scalable programmability from base torque-and-velocity through multi-axis master

AKD® Servo Drive

The AKD servo drive delivers cutting-edge technology and performance with one of the most compact footprints in the industry. These feature-rich drives provide a solution for nearly any application, from basic torque-and-velocity applications, to indexing, to multi-axis programmable motion with embedded Kollmorgen Automation Suite™. The versatile AKD sets the standard for power density and performance.

General Specifications

120 / 240 Vac 1 & 3 Phase (85 -265 V)	Continuous Current (Arms)	Peak Current (Arms)	Drive Continuous Output Power Capacity (Watts)	Internal Regen (Watts) (Ohms)		Height mm (in)	Width mm (in)	Depth mm (in)	Depth with Cable Bend Radius mm (in)
AKD-x00306	3	9	1100	0	0	168 (6.61)	59 (2.32)	156 (6.14)	184 (7.24)

Note 1: For complete AKD model nomenclature, refer to page 81.

Note 2: Additional AKD information can be found online.

AKD® Family Servo Drive Nomenclature

AKD®2G Servo Drive

Note: Options shown in blue text are considered standard.

AKD® Servo Drive

AKD - B 003 06 - NB AN - 0000

AKD Series

Version

B = Base drive

C = Central power supply for AKD-N (Requires CB Extension)

N = Decentralized drive (Requires DB, DF, or DS Extension)

P = Position indexer (motion tasking)

T = AKD BASIC Language Programmable drive (Requires IC or NB Extention)

M = Multi-axis Master Drive (Requires M1 or MC Extension option and EC Connectivity option)

Current Rating

003 = 3 Amp

006 = 6 Amp

010 = 10kW (for AKD-C, this field refers to power.)

012 = 12 Amp

024 = 24 Amp

048 = 48 Amp

Voltage

06 = 120/240 Vac 1Ø/3Ø (24 Amp Drive: 240 Vac 3Ø only)

07 = 240/480 Vac 3Ø (Version C: 07 = 400/480 Vac 3Ø | Version N: 07 = 560/680 Vdc)

Variants

0000 = Standard

Connectivity*

AN = Analog command

CN = CANopen®

EC = EtherCAT®

EI = EtherNet/IP™

PN - PROFINET®

SQ = SynqNet®

Drive Version Availability

B, P, T

P

C, M, N, P

P

P

B

* Motion Tasking is included as a free upgrade with CN, EC, EI and PN

Extension

CB = Without extention (AKD-C version only)

DB = Hybrid motor cable (AKD-N version only)

DF = Additional EtherCAT® port + feedback connector (AKD-N version only)

DS = Local STO + feedback connector (AKD-N version only)

IC = Expanded I/O version and SD card slot (AKD-T version only)

M1 = High performance multi-axis controller

MC = Standard multi-axis controller

NB = Without extensions

Note: Options shown in blue text are considered standard.

Kollmorgen 2G Cable Nomenclature

Kollmorgen 2G Cables

H2 – 12 – 015 – A1 – 00 – XXXX00

Cable Version

Cable Jacket Material – PUR

- F2 Mid-flex Feedback Cable PUR
- H2 Mid-flex Hybrid PUR with brake
- P1 Power Cable PUR
- P2 Power Cable PUR with brake

Cable Jacket Material – PVC

- F5 Mid-flex Feedback Cable PVC
- H6 Mid-flex Hybrid PVC with brake
- P5 Mid-flex Power Cable PVC
- P6 Mid-flex Power Cable PVC with brake

Connector Type

If Feedback, connector type [connector type and pinout]

- 10 AKD, AKD2G, 15 Pin D-Sub, 45° angle, Resolver
- 12 AKD, AKD2G, 15 Pin D-Sub, 45 degree angle, EnDat® 2.1, BiSS B
- 14 AKD, AKD2G, 15 Pin D-sub, 45 degree angle, HIPERFACE®
- 18 AKD, AKD2G, 15 Pin D-sub, 45 degree angle, SFDG2
- 20 AKD, AKD2G, 15 Pin D-sub, 45 degree angle, Comcoder, Sine Enc. w/ Halls
- 41 S300/S700 Resolver 9 pin D-sub
- 42 S300/S700 Encoder 15 pin D-sub (EnDat® 2.2, Biss C)
- 43 S300/S700 Encoder 15 pin D-sub (Sine Encoder w Halls)

If Power or Hybrid drive connector type

- 11 AKD-x00306, -x00606 (Power and Hybrids with HDSL, SFD3)
- 12 AKD-x01206, -x02406 (Power and Hybrids with HDSL, SFD3)
- AKD-x00307, -x00607, -x01207, -x02407 (Power and Hybrids with HDSL, SFD3)
- 13 AKD-x04807 (Power and Hybrids with HDSL, SFD3)
- 14 AKD-x00306, -x00606 (Hybrids with EnDat 2.2)
- 15 AKD-x01206, -x02406 (Hybrids with EnDat 2.2)
- AKD-x00307, -x00607, -x01207, -x02407 (Hybrids with EnDat 2.2)
- 21 AKD2G-x00306, -x00606, -x01206
- AKD2G-x00307, -x00607, -x01207, -x02406, -x02407
- 33 AKD-N DB (Hybrid cable)
- 34 AKD-N DF/DS (Power cable)
- 41 S300 MV (Power or Hybrid w/ SFDG3, DSL)
- 42 S300 HV (Power or Hybrid w/ SFDG3, DSL)
- 43 S300 MV (Hybrid with EnDat 2.2-22)
- 44 S300 HV (Hybrid with EnDat 2.2-22)
- 46 S701-S724 connector (Power or Hybrid w/ SFDG3, HDSL)
- 47 S701-S724 connector (Hybrid with EnDat 2.2-22)
- 48 S748/S772 flying leads
- 00 Unterminated (Blunt Cut)
- SP Specials

Length (no less than 100 mm increments)

- xxxx00 Length in mm
Standard lengths: 1, 3, 6, 9, 12, 25
Example:
6 m cable = 006000
25 m cable = 025000

Options

- 00 Standard Option Set

Motor Mating Connector Type

Hybrid/Power Connectors

- A1 AKM2G, M23 SpeedTec® (9)
- A4 AKM2G, M40 SpeedTec (9)
- A5 AKM1G, M23 SpeedTec (8)
- B1 AKM2G, M23 htec (9) standard keying, DSL
- B2 AKM2G, M23 htec (13) (rotated keying, EnDat 2.2)
- B3 AKM2G, M40 htec (11) (standard keying, DSL)
- C1 AKM/AKM2G, M15 ytec® (9)
- C4 AKM, M15 itec (9) (SFD3)
- W5 AKM, M23 Hummel Washdown (8)

Feedback Connectors

- A2 AKM/AKM2G, M23 SpeedTec (12)
- A3 AKM/AKM2G, M23 SpeedTec (17)
- C2 AKM/AKM2G, M15 ytec (12)
- C3 AKM/AKM2G, M15 ytec (15)
- UB Unterminated (Blunt cut)
- UF Unterminated (flying leads)

Cable Type

If Feedback, type [cable construction, not pinout]

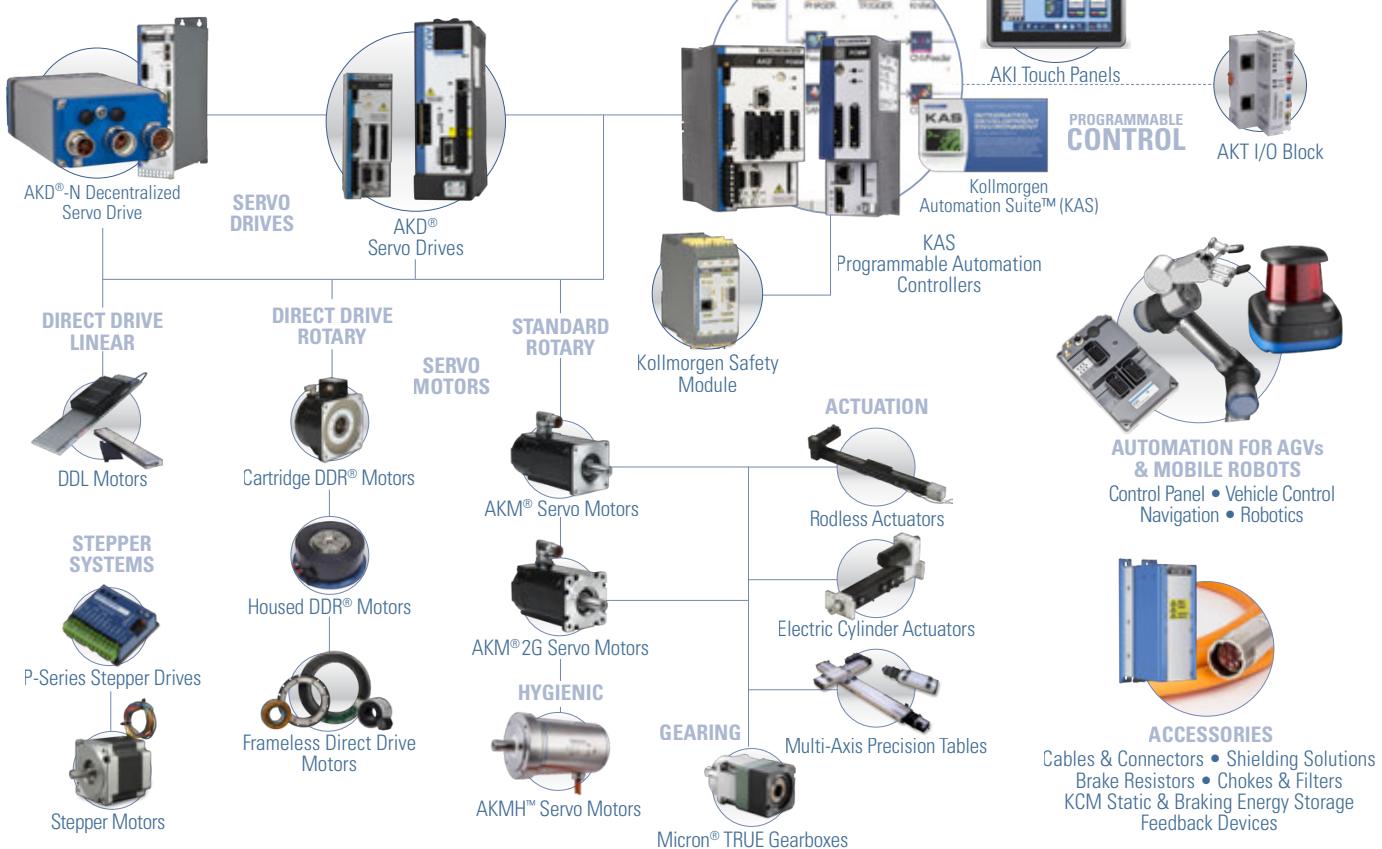

- FB1 4 Conductor
- FB2 8 Conductor
- FB3 6 Conductor
- FB4 16 Conductor
- FB5 14 Conductor
- FB6 10 Conductor
- FB7 12 Conductor

If Power or Hybrid drive connector type

- 010 1.0 mm²
- 015 1.5 mm²
- 025 2.5 mm²
- 040 4.0 mm²
- 060 6.0 mm²
- 100 10.0 mm²

About Kollmorgen

Since its founding in 1916, Kollmorgen's innovative solutions have brought big ideas to life, kept the world safer, and improved peoples' lives. Today, its world-class knowledge of motion systems and components, industry-leading quality, and deep expertise in linking and integrating standard and custom products continually delivers breakthrough motion solutions that are unmatched in performance, reliability, and ease-of-use. This gives machine builders around the world an irrefutable marketplace advantage and provides their customers with ultimate peace-of-mind.

For assistance with your application needs in North America, contact us at: 540-633-3545, support@kollmorgen.com or visit www.kollmorgen.com for a global contact list.
