

# Kollmorgen AKMH™ Hygienic Stainless Steel Servomotor

**KOLLMORGEN**®

*Because Motion Matters™*

# Kollmorgen. Every solution comes from a real understanding of the challenges facing machine designers and users.

**The ever-escalating demands of the marketplace mean increased pressure on machine designers and users at every turn.** Time constraints. Demands for better performance. Having to think about the next-generation machine even before the current one is built. While expectations are enormous, budgets are not. Kollmorgen's innovative motion solutions and broad range of quality products help engineers not only overcome these challenges but also build truly differentiated machines.

**Because motion matters, it's our focus.** Motion can distinctly differentiate a machine and deliver a marketplace advantage by improving its performance. This translates to overall increased efficiency on the factory floor. Perfectly deployed machine motion can make your customer's machine more reliable and efficient, enhance accuracy and improve operator safety. Motion also represents endless possibilities for innovation. We've always understood this potential, and thus have kept motion at our core, relentlessly developing products that offer precision control of speed, accuracy and position in machines that rely on complex motion.

## Removing the Barriers of Design, Sourcing, and Time

At Kollmorgen, we know that OEM engineers can achieve a lot more when obstacles aren't in the way. So, we knock them down in three important ways:

### Integrating Standard and Custom Products

The optimal solution is often not clear-cut. Our application expertise allows us to modify standard products or develop totally custom solutions across our whole product portfolio so that designs can take flight.

### Providing Motion Solutions, Not Just Components

As companies reduce their supplier base and have less engineering manpower, they need a total system supplier with a wide range of integrated solutions. Kollmorgen is in full response mode with complete solutions that combine programming software, engineering services and best-in-class motion components.

### Global Footprint

With direct sales, engineering support, manufacturing facilities, and distributors across North America, Europe, Middle East, and Asia, we're close to OEMs worldwide. Our proximity helps speed delivery and lend support where and when they're needed.

### Financial and Operational Stability

Kollmorgen is part of Danaher Corporation. A key driver in the growth of all Danaher divisions is the Danaher Business System, which relies on the principle of "kaizen" – or continuous improvement. Using world-class tools, cross-disciplinary teams of exceptional people evaluate processes and develop plans that result in superior performance.

# AKMH™ Hygienic Stainless Steel Servomotor

**Kollmorgen has designed custom motors for challenging environments for over 70 years.** The most notable were the motors used in Jason Jr., the ROV that was used to explore the Titanic.

The culmination of these experiences has been leveraged in the AKMH series of motors. Designed for food contact and splash zones, the AKMH reduces cleaning time and maintenance, thus directly contributing to higher overall OEE for machines.

**Reduced Recall Risk.** The Food Modernization Safety Act (FMSA) gives the US federal government the ability to shutdown facilities, recall food products, and levy stiff fines to ensure public safety in regards to food product manufacturing. The AKMH is designed to meet the toughest hygienic requirements in the industry in order to reduce the possibility of food borne illnesses and costly recalls.

**Designed for Fast Cleaning and Increased Uptime.** The AKMH stainless steel motor is designed to meet the standards for IP69K, EHEDG, and 3A and is built with FDA approved, food grade materials. The careful elimination of flat surfaces, cracks, and crevices prevents the build-up of foreign material and bacteria. The AKMH housing and cable can endure daily wash downs with high pressure, high temperature, and caustic chemicals. The robust design means that guards and covers are not required to protect the motor from harsh cleaning regimens. These AKMH features constitute quicker cleaning, keeping your machine running, and increasing the OEE of your manufacturing line.

**Bottom Line.** The Stainless Steel AKMH series is designed for strict aseptic machine applications. The AKMH comes in 19 standard motor sizes, with multiple standard windings for each to fit the many motor applications found in food, beverage, and pharmaceutical industries. Kollmorgen's AKMH helps maintain the highest standard of machine cleanliness, increases OEE, and reduces the possibility of devastating recalls.

## AKMH™ Hygienic Stainless Steel Servomotors – The Advantages:

### Increase of the overall equipment effectiveness (OEE)

Faster and environmentally-friendly cleaning	<ul style="list-style-type: none"> <li>Open, hygienic machine design without protective casings</li> <li>Considerable reduction in the amount of cleaning agents used; less waste water</li> </ul>
No machine failures caused by cleaning or corrosion	<ul style="list-style-type: none"> <li>Protection class IP69K for the motor housing, cable screw connection, and shaft seal</li> <li>Designed for regular high-pressure and high-temperature cleaning</li> <li>Cable and sealing elements are resistant to standard cleaning agents</li> <li>No corrosion inside the motor: pressure compensation via the cable prevents moisture in the motor</li> </ul>
Lower operating costs	<ul style="list-style-type: none"> <li>Increased machine availability thanks to faster cleaning</li> <li>Faster cleaning reduces the amount of cleaning agents and energy used</li> <li>High energy-efficiency thanks to highly efficient motor/servo amplifier combination</li> </ul>
Higher capacity	<ul style="list-style-type: none"> <li>Fast and precise drives in conjunction with AKD servo amplifiers</li> <li>Process monitoring and optimization using Kollmorgen software tools</li> </ul>

### Reduced risk of recall campaigns

Hygiene-optimized housing design	<ul style="list-style-type: none"> <li>Housing made of 1.4404 stainless steel with smooth surface to prevent the adhesion of germs</li> <li>If installed vertically, liquids drained by means of curved cover</li> <li>No formation of a dirt trap; motor housing does not have corners or external assembly elements</li> <li>No paint removed from the rating plate thanks to laser engraving</li> </ul>
Use of approved hygienic components	<ul style="list-style-type: none"> <li>Bearing lubrication and shaft seal are FDA approved</li> <li>Adherence to the guidelines set out by the European Hygienic Engineering &amp; Design Group (EHEDG) and 3A Sanitary Certificate</li> </ul>
Hygienic connection technology	<ul style="list-style-type: none"> <li>FDA-approved cable option with silicone tube coating suitable for use with food products</li> <li>Minimal cable work thanks to single cable technology with cable channels</li> <li>Easy cleaning prevents the formation of dirt traps in the cables</li> </ul>

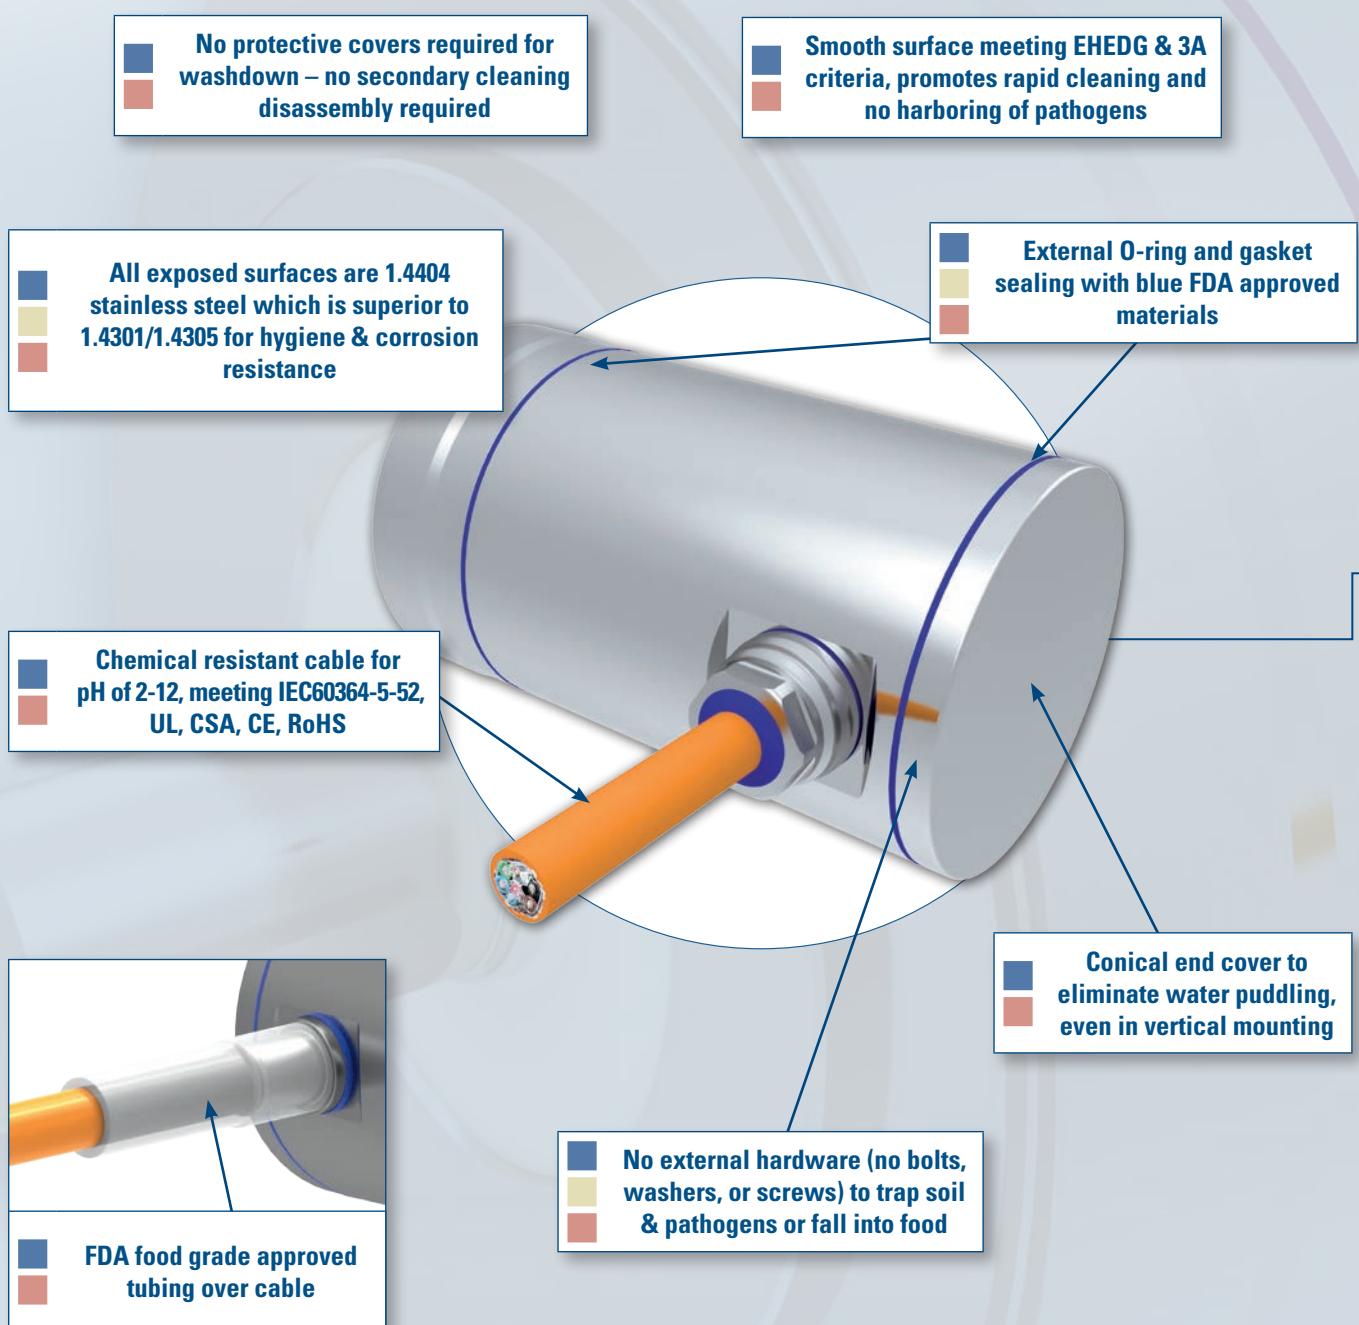

### Shorter development times and design freedom

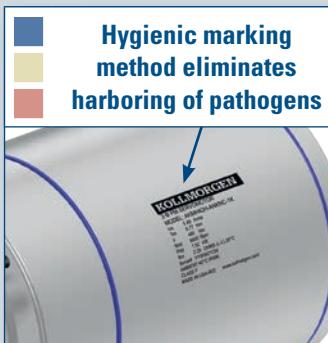

Optimum design of the drive	<ul style="list-style-type: none"> <li>Large selection of standard motors in practical, graduated performance classes</li> <li>19 sizes, flange and shaft dimensions in accordance with IEC and NEMA</li> <li>Continuous torques of up to 22 Nm, peak torques of up to 92 Nm</li> <li>Speeds of up to 8000 rpm</li> <li>Digital SFD3 and Hiperface DSL feedback devices</li> <li>Braking and cable options</li> </ul>
Simple startup and parameterization	<ul style="list-style-type: none"> <li>Plug-and-play connection with pre-assembled, connectable cables; no screw connections</li> <li>Simple machine structure thanks to single cable and decentralized connection technology</li> <li>Digital rating plate for fast startup</li> <li>Software tools for parameterization and drive monitoring</li> </ul>
Low energy consumption	<ul style="list-style-type: none"> <li>High efficiency thanks to permanent magnet technology</li> <li>20% lower level of derating thanks to special motor design</li> </ul>
Kollmorgen development support	<ul style="list-style-type: none"> <li>Extensive advice provided by the Kollmorgen Support Team</li> </ul>
Co-engineering	<ul style="list-style-type: none"> <li>Development of special drive solutions in cooperation with the customer or as part of a customer order</li> </ul>

# AKMH Design Features

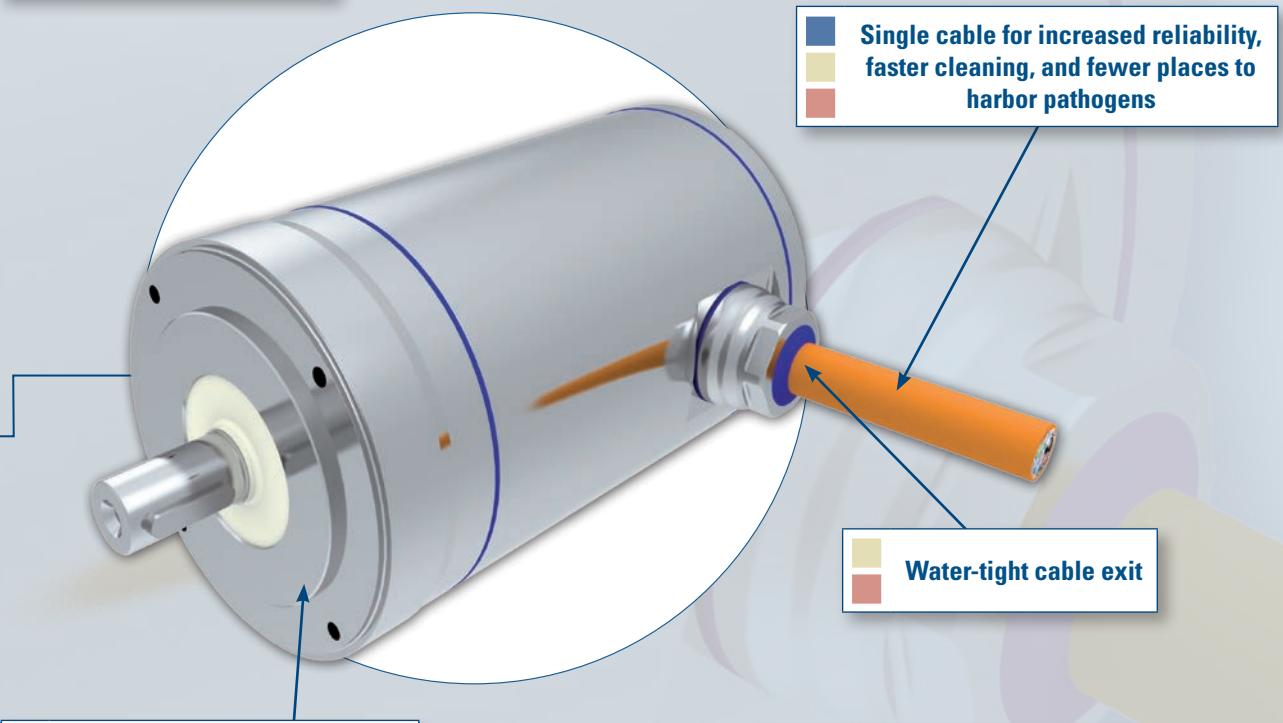

## The key benefits of AKMH clean design features:

- Reduces risk of food recall
- Increases reliability in all wash-down applications
- Reduces cleaning time: higher OEE

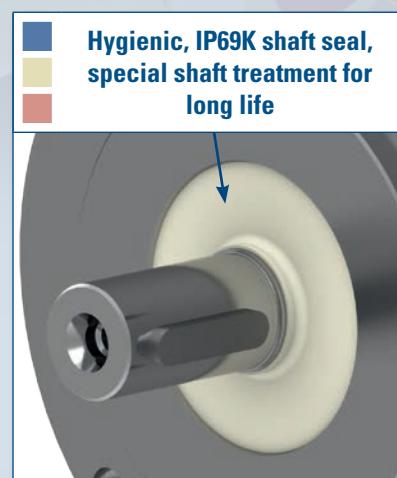

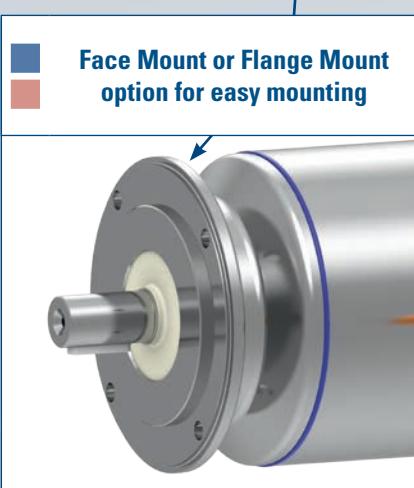

Unique design technique to eliminate condensation

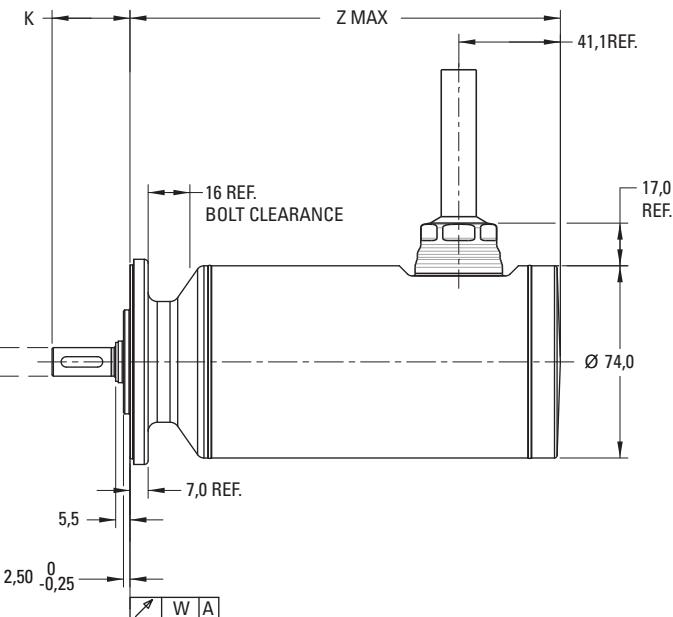

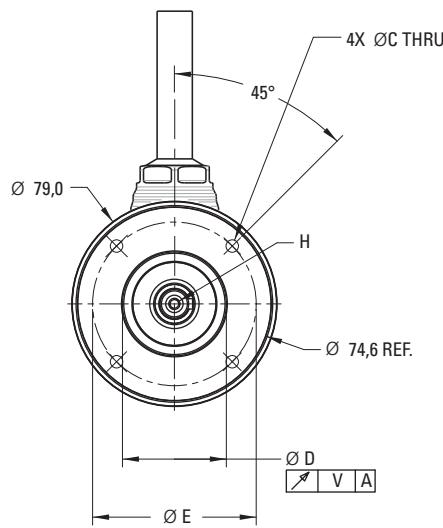

Water-tight cable exit

Notes:

① Motor winding temperature rise  $\Delta T=100$  K, at 40°C ambient.

② All data referenced to sinusoidal commutation.

④ Motor with standard heat sink.

⑤ May be limited at some values of Vbus.

# L10 Bearing Fatigue Life and Shaft Loading

## Bearing Fatigue

## Bearing Fatigue

## Shaft Loading

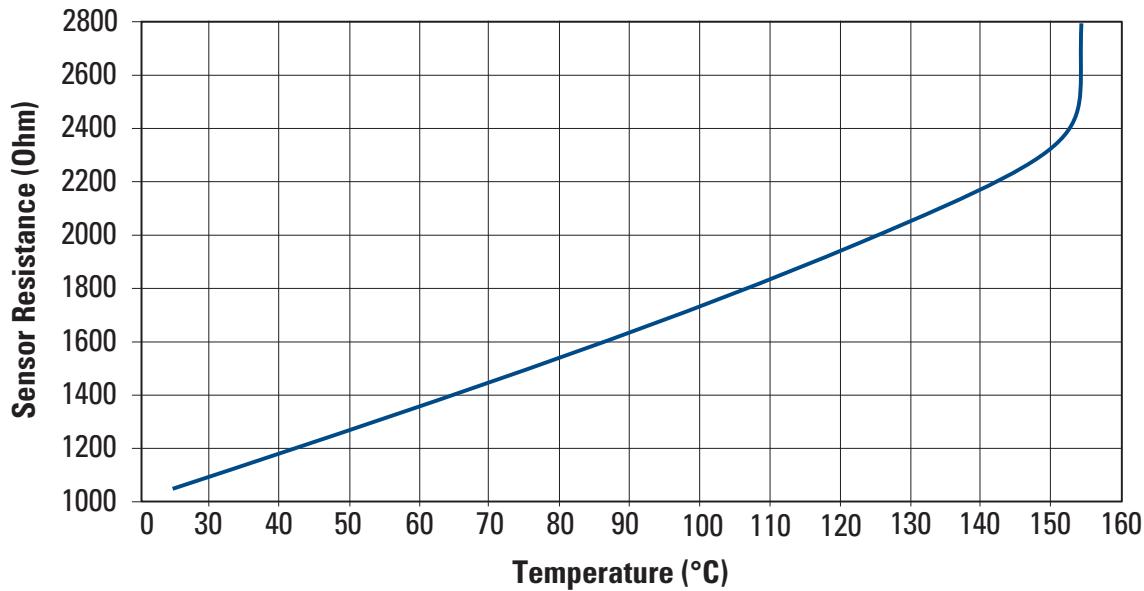

Motor	Max. Radial Force (N)	Max. Axial Force(N)
AKMH2xy-A / C	140	600
AKMH2xy-B / D	120	600
AKMH3xy-A / C	200	600
AKMH4xy-A / C	450	1400
AKMH4xy-B / D	195	1400
AKMH5xy-A / C / G / H	635	1740
AKMH5xy-B / D	245	1740
AKMH6xy-A / C	1250	2200
AKMH6xy-D	1050	2200

The maximum radial load ratings reflect the following assumptions:

1. Motors are operated with peak torque of the longest member of the frame size.
2. Fully reversed load applied to the end of the smallest diameter standard mounting shaft extension. Excluding AKMH4X-CC which is rated at 240 N max. radial force.
3. Infinite life with 99% reliability.
4. Safety factor = 2.

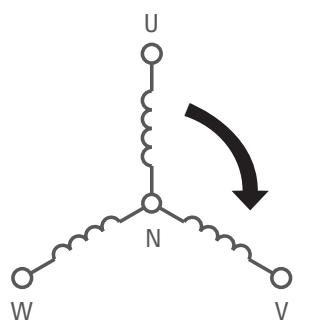

# Overload Protection

The standard version of each motor is fitted with an electrically isolated temperature sensor (rated temperature  $155^{\circ}\text{C} \pm 5\%$ ). The sensor does not provide any protection against short, heavy overloading. The sensor is integrated into the monitoring system of the AKD.

## Phase Diagram

### Motor Winding Configuration and Rotation – All Motors

Phase between voltages U, V, W when the motor is rotated CW (viewed from the drive shaft end).

# Brake Option

## Holding Brake

The holding brake is designed to provide static holding torque to the motor shaft with the brake coil de-energized. The brake must first be released (coil energized) prior to commanding motor rotation as determined by its drop-out time. The brake is intended for holding or “parking” of a stationary motor. It is not intended for dynamic braking. There should be absolutely no motion of the rotor when power is removed from the brake coil.

## AKMH Motor Brake Specifications

Motor Size	Minimum Static Torque at 120 °C	Power Consumption at 24 V, 20 °C	Current at 24 V, 20 °C	Inertia	Closing Time (engage)	Opening Time (release)	Backlash	
							Maximum	Typical
	Nm	Watts ±7 %	A DC	kg·cm <sup>2</sup>	ms	ms	deg	deg
AKMH2	1,42	8,4	0,35	0,011	36	35	1,01	0,46
AKMH3	2,5	10,1	0,42	0,011	20	50	1,01	0,46
AKMH4	5,3	12,8	0,53	0,068	30	75	0,81	0,37
AKMH5	14,5	19,5	0,82	0,173	30	115	0,71	0,31
AKMH6	25	25,7	1,07	0,605	40	155	0,51	0,24

Note 1: Operating Voltage: 24 V DC ± 10%.

Note 2: Maximum backlash is calculated using worst-case tolerancing, and typical backlash is calculated using statistical tolerancing.

# Feedback Options

Robust resolver based encoder systems have been proven for several years in many drive systems. More than ten years ago Kollmorgen began pioneering the advance towards the digital resolver; bringing to market the innovation that combines the benefits of a robust analog technology with the advantages of digital encoder systems. Whether you choose the digital resolver SFD3 or high-resolution digital Hiperface®-DSL encoders, Kollmorgen single-cable technology will bring you significant cost advantages, better performance and higher data reliability - from the very first meter of cable.

## AKMH Servomotor with AKD/AKD-N Servo Drive

Feedbackdevice	Option Code	Plug-and-Play, Motor-ID	Resolution with AKD, AKD-N (Bit)	Accuracy arc-min (±)
Digital Resolver, SFD3 single-turn, 2-wire	CA	Y	24	9
Hiperface-DSL-Encoder, single-turn	GE	Y	18	0,60
Hiperface-DSL-Encoder, multi-turn	GF	Y	18	0,60

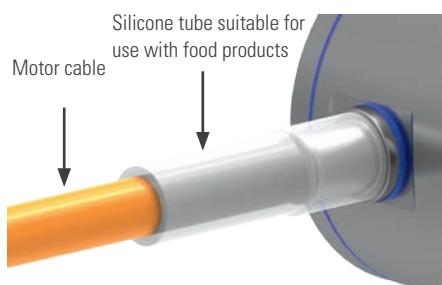

# Cable Options

## Technical Data of the Hybrid Cable

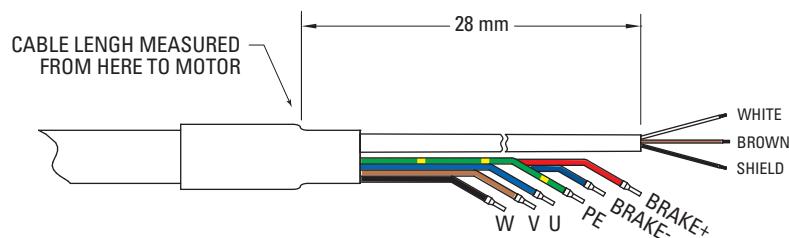

Electric Properties and Design	
Type of cable	Multi-core insulated hybrid cable; only one cable type required for digital resolver SFD3 and Hiperface DSL
Max. Operating Voltage	600 V
Max. Operating temperature	125 C
Inner conductor	1x4, 2x2 including shield, overall shield
Motor connection	4 conductors in AWG14 or AWG12 (meet the standards NFPA79 (Electrical Standard for Industrial Machinery), EN-60204-1 (Safety of Machinery – Electrical Equipment of Machines) and IEC 60364-5-52 (Electrical Installations), without additional motor overload protection being required based on the motor output)
Brake	Two conductors, insulated
Communication	Two conductors, insulated, nominal impedance 110 Ohm ( $\pm 10$ Ohm) for high data rates
Overall shield	Available
Vent	Available
Approvals	UL, CSA, CE, RoHS compliant materials in accordance with EU Directive 2002/95/EC Not approved for direct contact with food products (see below)
Mechanical Properties	
Material	TPE (thermoplastic elastomer), suitable for regular cleaning
Protection class	IP69K
External diameter	
Rated current of up to 12A	15.1 mm, 17.8 mm (including protective sleeve), bending radius of more than 153 mm, inner conductor 4x AWG14
Rated current of up to 20A	16.5 mm, 19.05 mm (including protective sleeve) bending radius of more than 165 mm, inner conductor 4x AWG12 Including silicone tube 25.4 mm (for cable types with a rated current of 12 A and 20 A)
Bending radius	At least 10 times the cable diameter; not suitable as ground cable
Color	RAL2003 (pastel orange)
Chemical properties	Resistant to standard cleaning products
Light resistance	Not UV resistant

## Using the Cable in Direct Contact with Food Products

The food-grade tubing option covers the single motor cable to provide an option for applications where the cable needs to be routed through a zone in which it could come in contact with food. This tubing is constructed from FDA approved material and is certified to the NSF 51 standard.

# Universal Drive Solutions for the Food, Beverage, and Pharmaceutical Industries

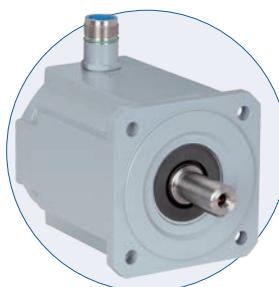

## Motors from Kollmorgen provide the perfect mix of performance and hygiene

The Kollmorgen modular system includes a wide range of motors with carefully graduated performance data, a variety of connection options, and feedback devices. With more than 500,000 standard motor designs, you will definitely find a suitable motor to meet your requirements.

Meeting the strict legal regulations and the customers' requests for innovative yet cost-effective drive solutions always poses a challenge to the mechanical engineer. Drive solutions from Kollmorgen provide the perfect mix of hygiene and performance data for applications in normal and difficult operating environments, as well as for hygienic drives. Kollmorgen has invested more than 70 years of experience in the AKM, AKM Washdown, AKM Washdown Food and AKMH stainless steel motor ranges that prove themselves on a daily basis in the testing conditions of the food, beverage, and pharmaceutical industries.

# From Special to Standard Solution Thanks to Co-Engineering

## Powerful, ready-to-install, washable: hygienic motor/gearhead combinations

Thanks to the Washdown, Washdown Food and Hygienic type AKM gearmotors, Kollmorgen has been able to realize most of the transport and rotary applications in the food and beverage industry, as well as downstream packaging using standardized drive solutions. This is based on combining an AKM servomotor with highly efficient gearheads.

The main advantages of the ready-to-install drive units with a consistent, hygienic design include: significantly reduced cleaning times due to smooth and water-repellant surfaces, low energy costs thanks to the highly efficient motor/gearhead combinations, as well as simplified design options for machines implemented by means of space-saving assembly without additional stainless steel casings. Thanks to the use of FDA-compliant materials and the specially rounded housing design, motor/gearhead combinations from Kollmorgen meet the highest hygiene standards and reduce the risk of product contaminations and recall campaigns.

AKM41E-BF06

AKM62L-F2CS-A35-59

AKM62K-BK17

Type		AKM41E-BF06	AKM62L-F2CS-A35-59	AKM62K-BK17	AKMH65M-AQT160-004
Version		Washdown, coated	Washdown, coated	Washdown-Food, coated	Hygienic, stainless steel
Rated output torque	Nm	51	668	175	64
Endurable acceleration torque	Nm	76	1390	400	876
Average output speed	rpm	75	28	181	675
Maximum output speed	rpm	95	67	200	1000
Gear ratio		31.5	59	19.39	4
Transmitter		Resolver	Resolver	Resolver	Digital resolver SFD3, Hiperface DSL
Special features			Circumferential backlash of less than 1 arcmin, holding brake	FDA-compliant coating, lubrication, and bearing grease	Circumferential backlash of 13 arcmin, single cable solution
Benefits		<ul style="list-style-type: none"> <li>• Developed for regular cleaning with common cleaning products with pH2 of up to 12</li> <li>• Space-saving motor/gearhead technology</li> <li>• Increased service life in rough environmental conditions</li> </ul>	<ul style="list-style-type: none"> <li>• High peak performance and minimal circumferential backlash</li> <li>• Extremely compact design including highest torque efficiency</li> <li>• Long service life thanks to washdown coating</li> </ul>	<ul style="list-style-type: none"> <li>• Lower energy cost thanks to high efficiency of the servomotor and gearhead</li> <li>• Suitable for indirect contact with food products</li> <li>• Simple to clean thanks to rounded housing design</li> </ul>	<ul style="list-style-type: none"> <li>• Fast to clean thanks to hygienic design and single cable solution</li> <li>• Simple startup by means of electronic rating plate and single cable connection technology</li> <li>• Reduced risk of food products having to be recalled thanks to hygienic design</li> </ul>

# AKD™ Servo Drive

**Our AKD Series is a complete range of Ethernet-based Servo Drives that are fast, feature-rich, flexible and integrate quickly and easily into any application.** AKD ensures plug-and-play commissioning for instant, seamless access to everything in your machine. And, no matter what your application demands, AKD offers industry-leading servo performance, communication options, and power levels, all in a smaller footprint.

This robust, technologically advanced family of drives delivers optimized performance when paired with our best-in-class components, producing higher quality results at greater speeds and more uptime. With Kollmorgen servo components, we can help you increase your machine's overall effectiveness by 50%.

**The advantages for you**

- Higher machine speed/throughput
  
- Less rejects, better quality
  
- Quicker exchange, increased availability
  
- Reduced time-to-market

**Key features**

- Feedback with maximum resolution (up to 27 bit)
- Torque and speed control with high bandwidth – The quickest digital torque control on the market: 0.67 µs
- Multi function Bode plot simplifies the evaluation and optimization of drive and machine performance
- Patented, powerful autotuning algorithms
- Enhanced servo technology enables excellent machine performance
- High-resolution analog input (digital --> analog)
  
- Two powerful processors enable quick settling time
  
- "Real time" software oscilloscope with six channels for quick startup and diagnostics
- Automatic completion of programmable commands saves searching for parameter names
- The recording and transmission of program plots and parameter settings with a mouse click enables the immediate transfer of machine performance data
- Powerful and user-friendly user interface
- Robust and reliable quality
  
- Supports a great number of single-turn and multi-turn feedback systems – Digital resolvers (SFD), EnDat2.2, EnDat2.1, BiSS, analog sin/cos encoders, incremental encoders, HIPERFACE® and resolvers
- Integrated motion bus systems EtherCAT®, SynqNet®, PROFINET®, Ethernet/IP® and CANopen®
- For operating rotary and linear motors
- Wide range of programming options
- Compatible with many front end controllers
- Exceptional power density

# AKD Standard Servo Drive

The AKD Servo Drive delivers cutting-edge technology and performance with one of the most compact footprints in the industry. These feature-rich drives provide a solution for nearly any application, from basic torque-and-velocity applications, to indexing, to multi-axis programmable motion with embedded Kollmorgen Automation Suite™. The versatile AKD sets the standard for power density and performance.

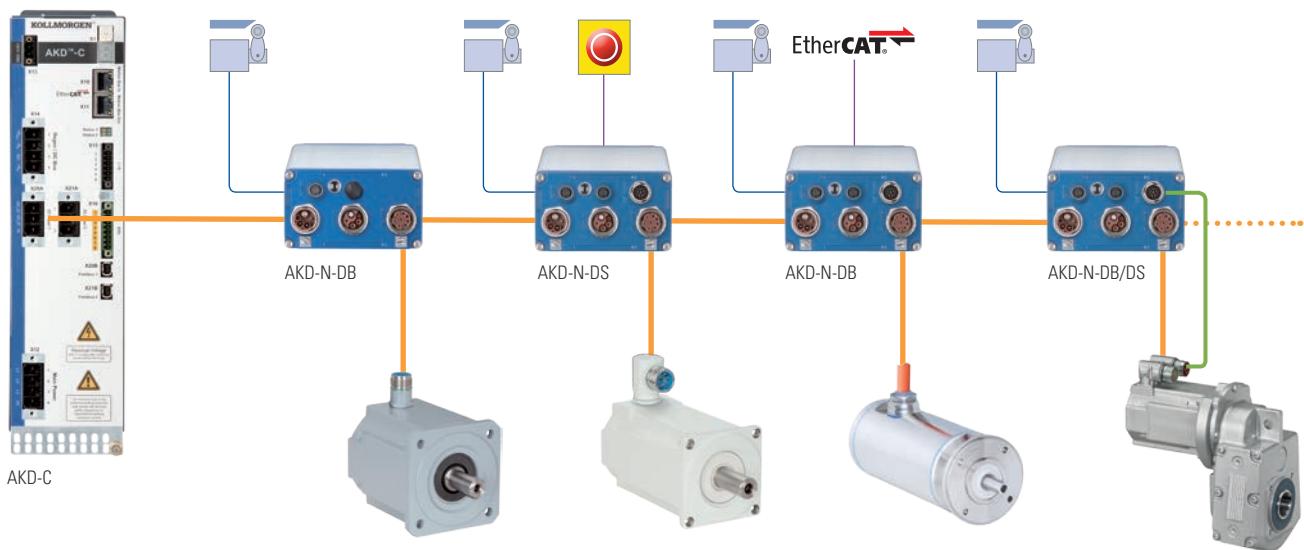

## General Specifications

120 / 240 V AC 1-ph / 3-ph (85 -265 V)	Continuous Current (A <sub>rms</sub> )	Peak Current (A <sub>rms</sub> )	Drive Continuous Output Power (kW)	Internal Regen (kW)	Internal Regen (Ohms)	Height (mm)	Width (mm)	Depth (mm)	Depth with Cable Bend Radius (mm)

# AKD-N Distributed Servo Drive

Our decentralized servo drive system increases the efficiency over the entire life cycle of a machine (overall equipment effectiveness, OEE). First of all, the design configuration and the simple connection technology decrease the time for assembly, installation and startup in machine construction. During the operating phase, the AKD-N then play a valuable part in energy savings due to the integrated DC connection. Further advantages in the production are faster cleaning cycles via high protection types as well as fewer cables in combination with space-saving switch cabinet superstructures for an increase in production space. Moreover, the assembly and connection technology increases the availability – and thus the productivity – as maintenance and service tasks are completed faster.

## More Freedom in Terms of Machine Design

Plug-in connections, free motor selection, mounting where there is already space, a high degree of integrated functions: These are only four examples of why straightforward drive and automation structures can be developed with the decentralized AKD-N servo drives – even in conjunction with the central AKD servo amplifiers. By using EtherCAT as the system bus for our servo amplifiers, we further reduce the complexity as the AKD-N can collect I/O signals and pass them on in bundled form. For that matter, the same can be said of the assembly and installation. No industrial electrical training is required for this purpose.

## General Specifications

Model	Continuous Current (A <sub>eff</sub> )	Peak Current (A <sub>eff</sub> )	Continuous Input Power (kVA)	Protection Class	I/O Options			Feedback System	
					Digital I/O	Local STO	Tert. Fieldbus	Single Cable	Dual Cable
AKD-N-DB	3/6	9/18	1,5/3	IP67	3/1	–	–	Digital Resolver SFD3, Hiperface DSL	–
AKD-N-DF	3/6	9/18	1,5/3	IP67	3/1	–	✓		Digital Resolver SFD3 BISS-C, ComCoder EnDAT
AKD-N-DS	3/6	9/18	1,5/3	IP67	3/1	✓	–		
AKD-C ① (Power Supply Module)	17	34	10 kW ②	IP20	1/1 1 Relay	✓ ③	–	na	na

① For 2x8 AKD-N ② Total power ③ STO input and STO status output, one each per strand

# MOTIONEERING® Application Engine

To help select and size Kollmorgen components, this Windows®-based motor-sizing program takes a systems approach to the selection of brushless DC servomotors, stepper motors and drives. MOTIONEERING application engine, available at [www.kollmorgen.com](http://www.kollmorgen.com), uses a project concept for the collection and saving of rotary and linear multi-axis load information. This provides the user the flexibility to sum the effects of multiple axes of motion for power supply and shunt regeneration sizing.

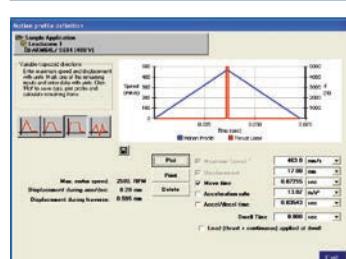

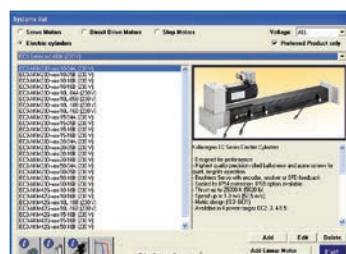

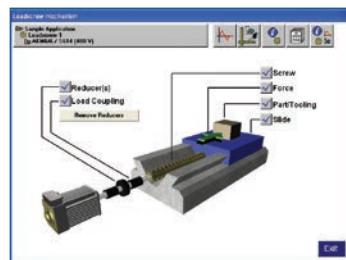

A wide variety of linear and rotary mechanisms are provided including lead screw, rack and pinion, conveyor, nip rolls, cylinder, rotary, and direct data-entry using unique sizing algorithms and product databases criteria.

The searchable database consists of hundreds of systems on product combinations including rotary housed and frameless brushless servomotors, direct drive rotary and linear brushless servomotors, linear positioners (electric cylinders, rodless positioners, and precision tables) and stepper systems.

The MOTIONEERING application engine also provides versatile units-of-measure selection options for mechanism and motion profile data-entry, with the ability to convert data into other available units. Online Help explains program functions and the definition of terms and equations used in the program.

## Features

- Group multiple mechanisms within a “project” – organize and combine data for power supply and regeneration sizing
- Types of mechanisms for analysis include lead screw, rack and pinion, conveyor, nip rolls, rotary and direct drive linear motor
- Motion profile options include simple triangle, 1/3-1/3-1/3 trapezoidal, variable traverse trapezoidal, and more
- Search results display shows color highlighted solution set of options for easy evaluation of system specifications and selection

Motion Profile

## Supported Operating Systems

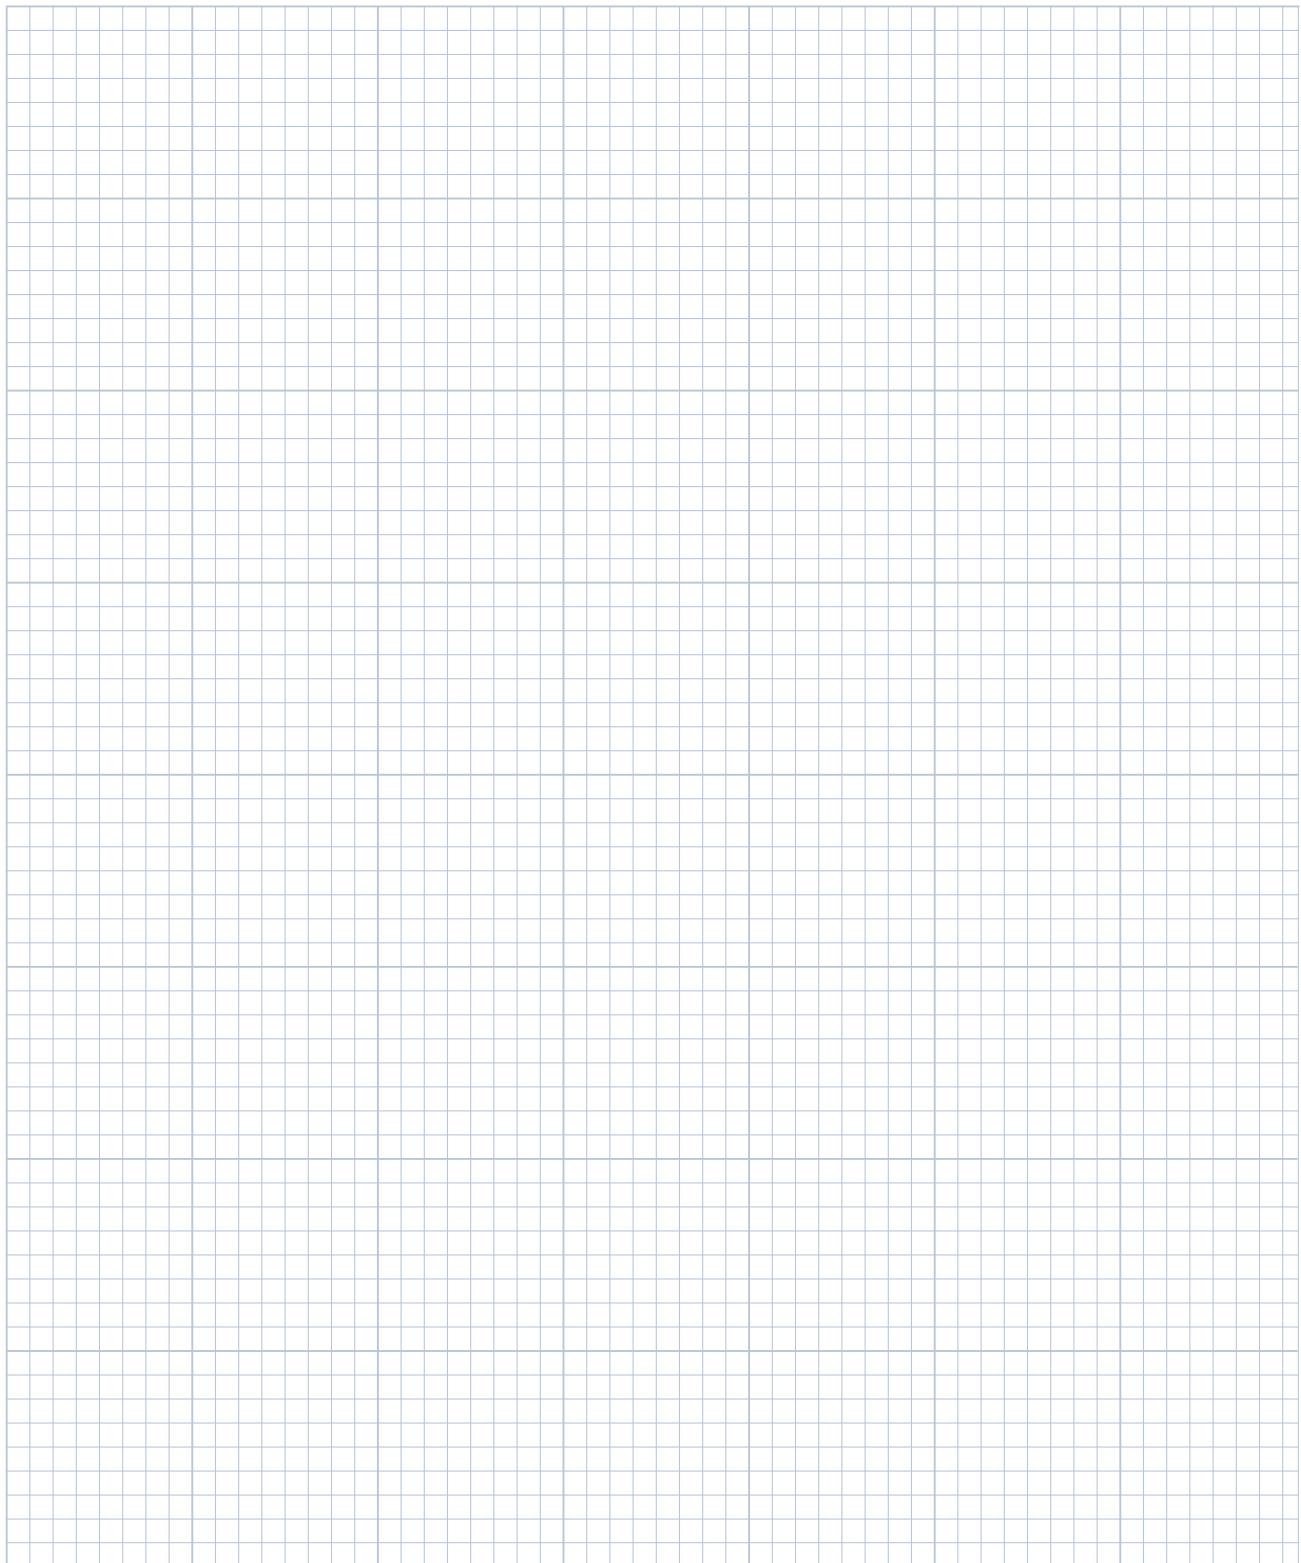

- Microsoft® Windows 2000, XP, Vista, Windows 7

## Motioneering 6.4.0 includes

- AKMH Hygienic Stainless Steel Motors and AKD systems at 120, 240, 400 and 480 V
- Designed to meet IP69K, EHEDG, 3A, and built with FDA approved food grade materials
- 19 frame/stack length combinations
- Continuous torque to 22 Nm
- Peak torque to 92 Nm
- Corrected length dimensions of some AKM servomotor & gearmotor models
- Corrected CH132 thermal resistance
- Added HIPERFACE DSL sine encoder to search field

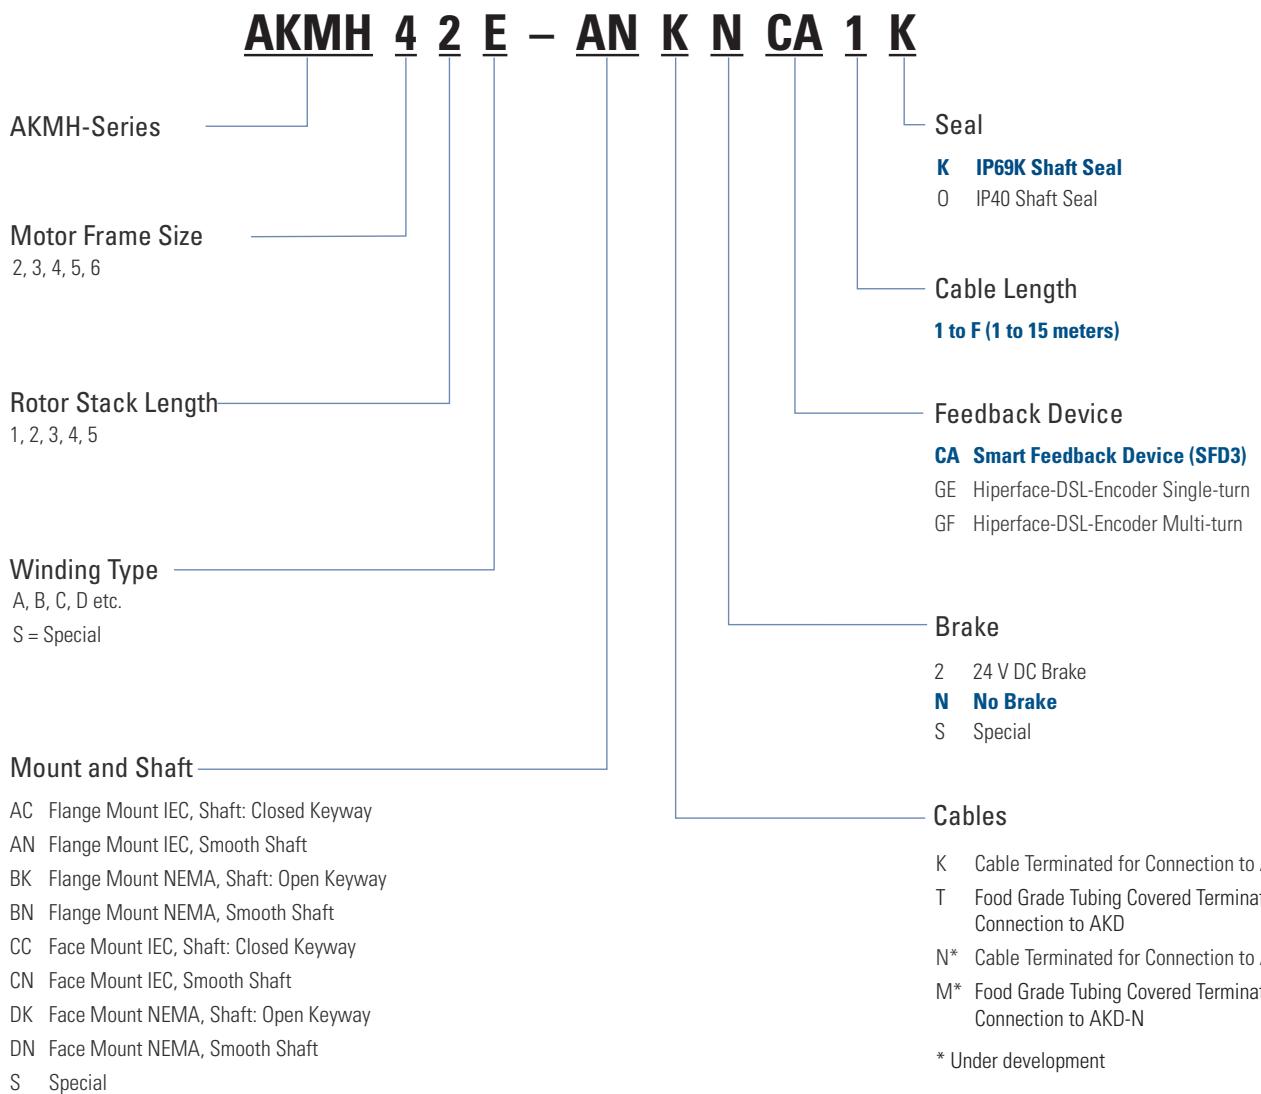

Note: Performance curves included for all servomotor systems

## About Kollmorgen

Kollmorgen is a leading provider of drive systems and components for machine engineering. Through world-class knowledge in motion, industry-leading quality and deep expertise in linking and integrating standard and custom products, Kollmorgen delivers breakthrough solutions unmatched in performance, reliability and ease-of-use, giving machine builders an irrefutable marketplace advantage.
