

RSA & GSA ELECTRIC ROD-STYLE ACTUATORS

ENDURANCE TECHNOLOGYSM
A Tolomatic Design Principle

LINEAR SOLUTIONS MADE EASY

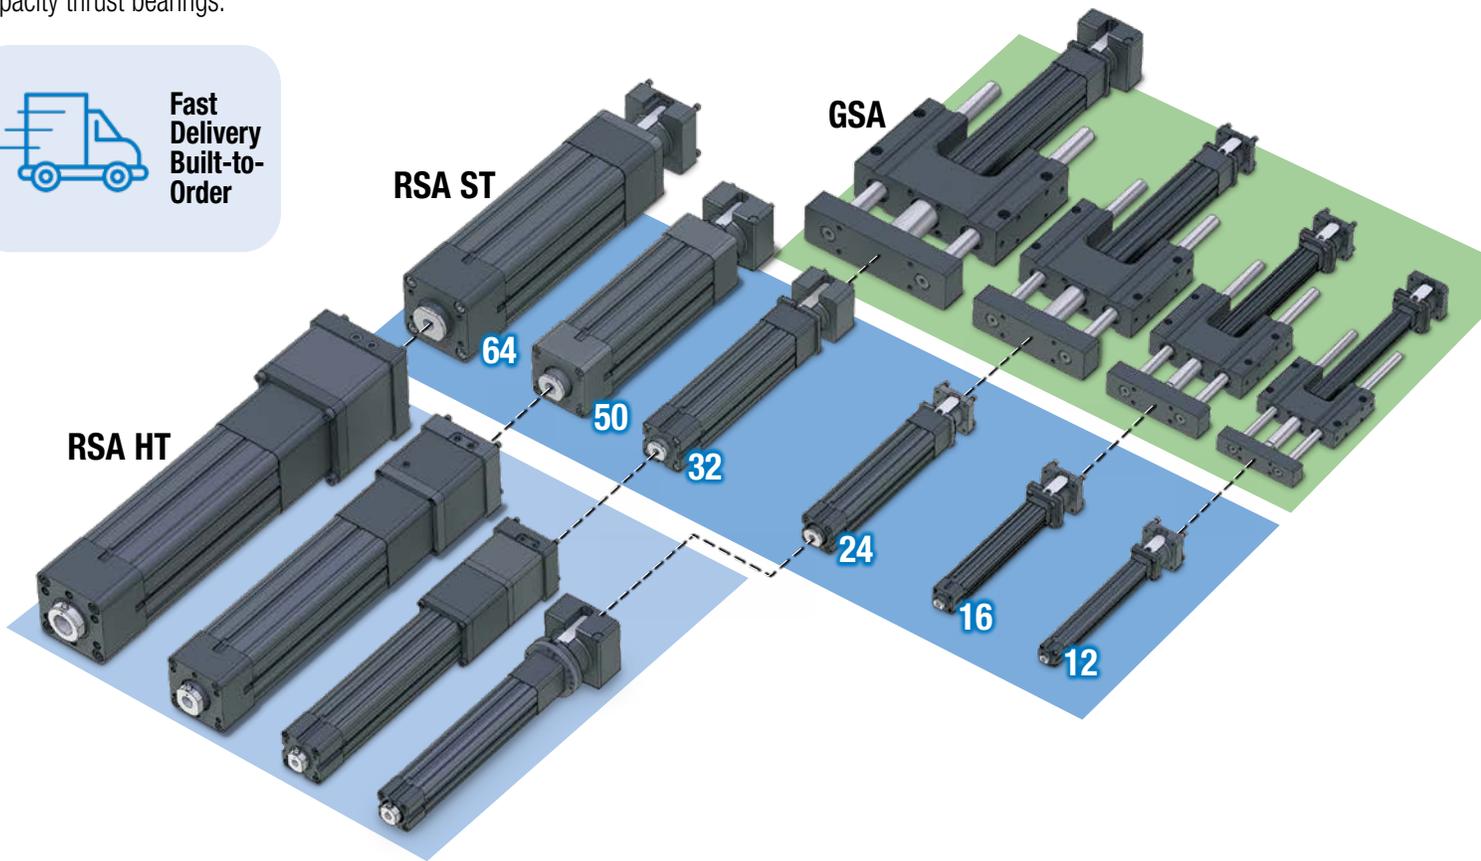

RSA & GSA Electric Rod-Style Actuators

WHAT ARE THE RSA & THE GSA?

The RSA is a flexible electric screw driven rod-style actuator. The standard RSA-ST model comes in six sizes. The guided RSA (GSA) adds guidance and load support to the design and is available in the 4 smaller sizes. The high force RSA-HT model is available in the 4 larger sizes, it incorporates stronger torque transmission components (couplers, pulleys, belts) and higher capacity thrust bearings.

**Fast Delivery
Built-to-Order**

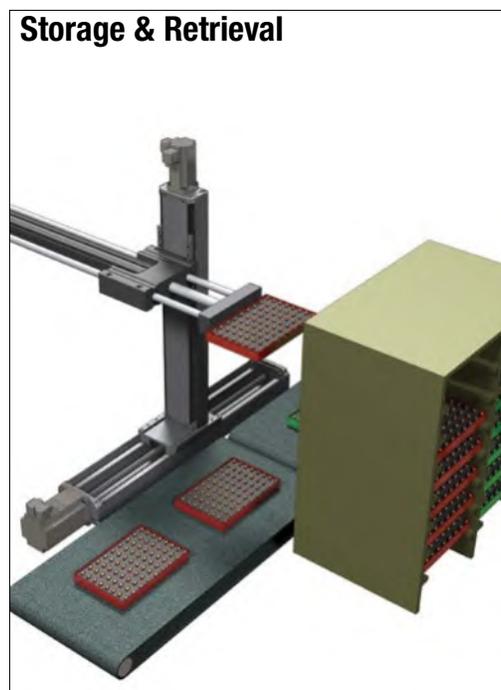

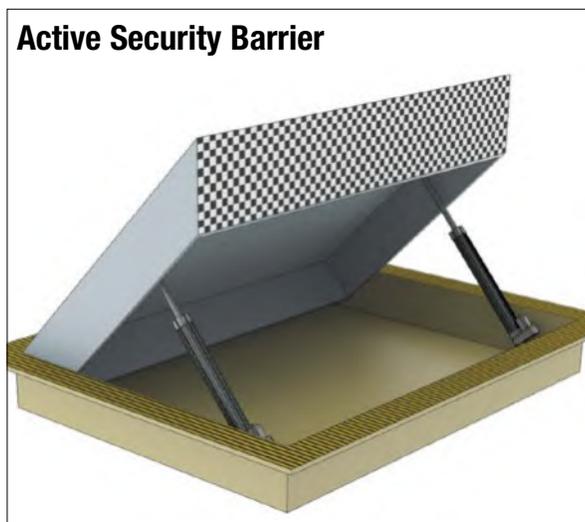

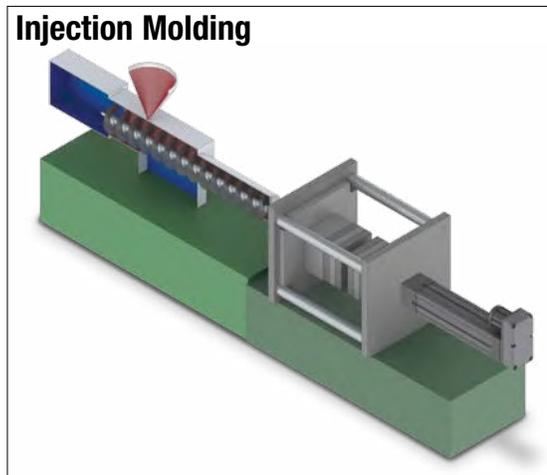

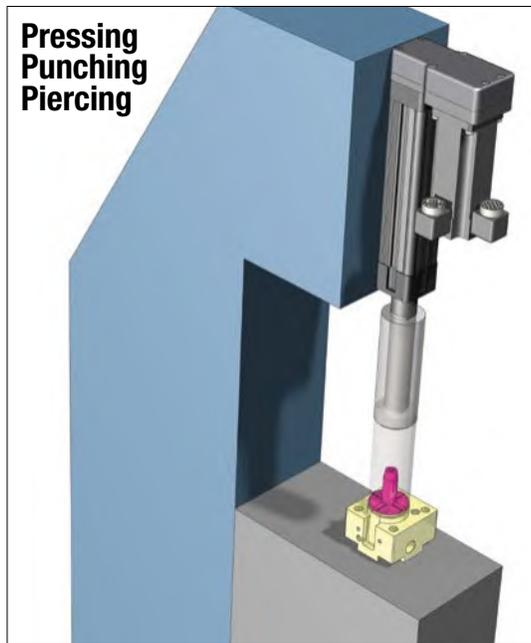

TOLOMATIC'S ELECTRIC ROD-STYLE ACTUATORS

(Not all models deliver maximum values listed, i.e.: Maximum thrust may not be available with maximum speed)

RSA & GSA Electric Rod-Style Actuators

Applications

Other Applications:

- Animation
- Assembly machinery
- Automatic tool changers
- Automotive
- Clamping
- Converting
- Conveyors
- Cycle testing
- Fillers
- Formers
- Hydraulic replacement
- Laser positioning
- Machine tools
- Material handling
- Medical equipment
- Molding
- Motion simulators
- Open / close doors
- Packaging equipment
- Parts clamping
- Patient lifts
- Pick & place
- Pneumatic replacement
- Precision grinders
- Product test simulations
- Riveting / fastening / joining
- Robot manipulator arms
- Sawmill equipment
- Semiconductor
- Stage motion control
- Stamping
- Table positioning
- Tension control
- Test stands
- Tube bending
- Volumetric pumps
- Water jet control
- Wave generation
- Web guidance
- Welding
- Wire winding
- and many more

RSA-ST ROD-STYLE ACTUATOR

ENDURANCE TECHNOLOGYSM

A Tolomatic Design Principle

Endurance Technology features are designed for maximum durability to provide extended service life.

The RSA rod screw actuator is ideal for medium to high thrust applications of guided loads. The compact design and cylinder style operation make this solution ideal for applications that were historically solved with pneumatic or hydraulic power. Many mounting options are available allowing the actuator to be installed in numerous applications. Built-to-order in stroke lengths up to 60 in (1.5 m) with your choice of screw technology.

RSA-ST

HIGH POSITIONAL ACCURACY

SCREW ACCURACY

Roller Nut ± 0.0004 "/ft.	± 0.0102 mm/300mm
Metric Ball Nut ± 0.002 "/ft.	± 0.051 mm/300mm

MULTIPLE SCREW TECHNOLOGIES

YOU CAN CHOOSE:

- Solid nuts of bronze or engineered resins offer quiet performance at the lowest cost; anti-backlash available
- Ball nuts offer efficiency at a cost effective price; low-backlash available

THRUST TUBE

- Steel thrust tube supports extremely high force capabilities
- Salt bath nitride treatment provides excellent corrosion resistance, surface hardness and is very resistant to adherence of potential contaminants

INTERNAL BUMPERS

Bumpers protect the screw and nut assembly from damage at both ends of stroke

SCREW SUPPORT BEARING

Engineered resin bearing provides continuous support of screw

NOSE BEARING

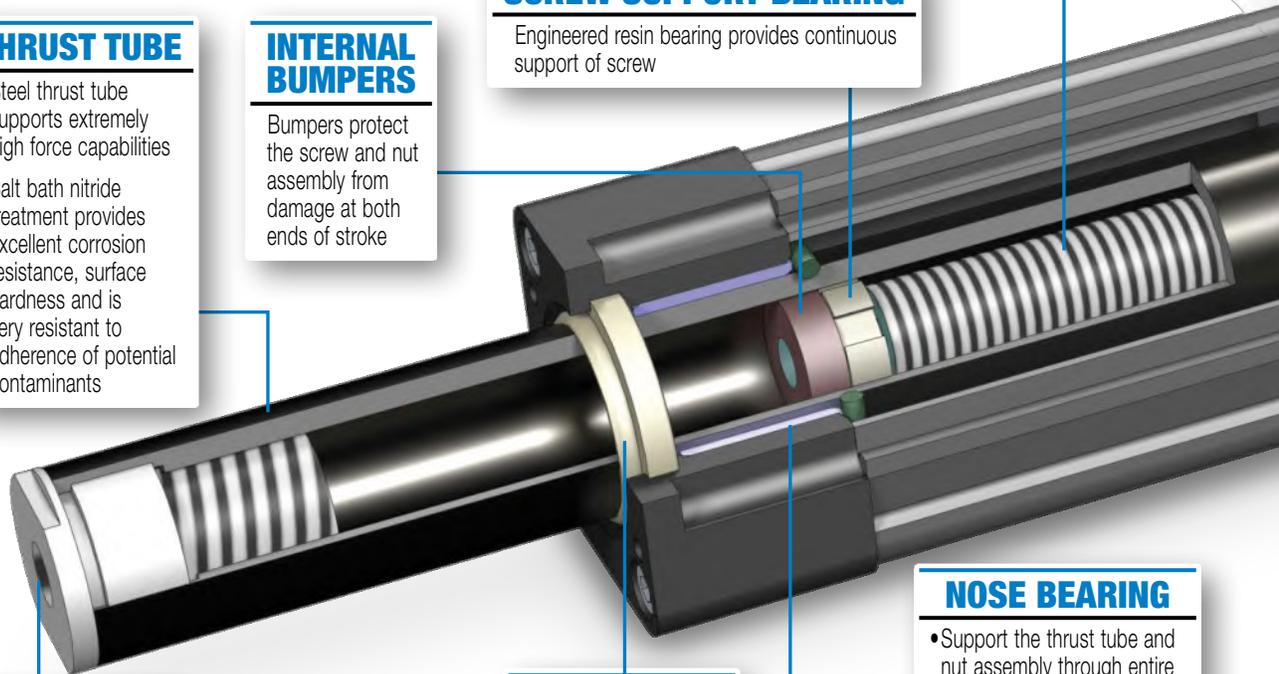

- Support the thrust tube and nut assembly through entire stroke length
- Unique nose bearing material allows for smooth operation and support of the thrust rod

THREADED ROD END

Provides a common interface to multiple rod end options

ROD WIPER

Prevents contaminants from entering the housing for extended life of the actuator

YOUR MOTOR HERE

YOU CAN CHOOSE:

- Specify the device to be installed and actuator ships with proper mounting hardware
- Specify and ship your device to Tolomatic for factory installation
- Motor supplied and installed by Tolomatic

MOTOR ORIENTATION

YOU CAN CHOOSE:

- Inline option directly couples the driving shaft and is typically a one-piece housing construction for optimum alignment and support of the motor
- Reverse-parallel option minimizes the overall length, coupling motor and driving shaft via a belt with a 1:1 or 2:1 reduction ratio

HIGH THRUST BEARING

Unique high thrust bearing assembly design eliminates run-out and isolates the linear forces for the drive shaft

BREATHER/PURGE PORTS

- Standard feature on RSA 32,50,64 size actuators
- As seen in this view, located on both the bottom and the opposite side of the actuator

• Use as Breather Port: allows air flow into the interior of the actuator. Prevents additional load on the motor caused by air buildup due to fast cycling of the RSA.

Use as Purge Port: positive pressure with air lines and filters insure contaminants (which could potentially shorten the actuator life) do not enter the interior of the actuator.

LIGHTWEIGHT ALUMINUM DESIGN

- Black anodized extrusion design is optimized for rigidity and strength
- External switch channels on all sides allow easy placement of position indicating switches

INTERNAL NUT BEARINGS

- Engineered resin guide bearings provide anti-rotation of the thrust rod
- Support the thrust tube and nut assembly through entire stroke length

OPTIONS

See page 7 for a complete list of RSA options including the HT-high torque option

RSA-HT OPTION

ENDURANCE TECHNOLOGYSM

A Tolomatic Design Principle

The HT option is a higher thrust option for the 24, 32, 50 and 64 sizes of the RSA family. RSA actuators with roller nuts are always HT option actuators. Use Tolomatic's online sizing software to determine if the HT Option is right for your application

STANDARD FEATURES
See page 4 for a complete list of RSA standard features

REDESIGNED LMI & RP HOUSING

Specially designed to accommodate larger motors & gearboxes with higher torques and larger bolt circles (up to 6.5", 165mm)

DURABLE BELT MATERIAL

High torque polyurethane timing belt with carbon tensile cords resists stretching

ENHANCED HIGH THRUST BEARING

RSA HT actuators come with high thrust angular contact ball bearing in matched pair assembly design which eliminates run-out and isolates the linear forces from the drive shaft

MULTIPLE SCREW TECHNOLOGIES

YOU CAN CHOOSE:

- Bronze solid nuts offer quiet performance at the lowest cost; anti-backlash available
- Ball nuts offer efficiency at a cost effective price; low-backlash available
- Roller nuts provide the highest thrust and life ratings available (HT option)

HEAVY DUTY INTERNAL BUMPERS

Bumpers protect the screw and nut assembly from damage at both ends of stroke

WHY CHOOSE THE HT OPTION?

- Higher strength components transfer torque from the gearhead/motor through the actuator
- Grease zerk allows convenient relubrication for extended screw service life
- Accommodates mounting large motors with up to 165mm bolt circle pattern

YOUR MOTOR HERE (Standard Feature)

YOU CAN CHOOSE:

- Specify the device to be installed and actuator ships with proper mounting hardware
- Specify and ship your device to Tolomatic for factory installation
- Motor or gearbox supplied and installed by Tolomatic

IP67 OPTION

Resist water ingress 1m deep for up to 30 min

RSA-HT

OPTIONS (Available for all RSA actuators unless noted)

• METRIC OPTION

Provides metric tapped holes for mounting of load to rod end and of actuator to mating surfaces

• SWITCHES

Choose from: Reed, Solid State PNP or NPN, all available normally open or normally closed

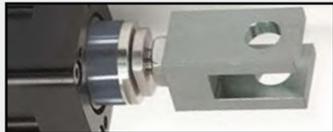

• IP67

Static: special gaskets for basic protection against water and dust ingress
32,50,64 sizes only: HT actuator (LMI and RP); ST actuator (RP motor mount only)

ROD END

• MET: External Threads male threads

• CLV: Clevis Rod End for pivoting mount

• SRE: Spherical Rod End for pivoting mount

• ALC: Alignment Coupler Rod End to compensate for mounting alignment

• XR: Rod Extension to separate load from the actuator

MOUNTING

• MP2: Mounting Plates for surface mounting

• FFG: Front Flange for mounting near rod end

• TRR: Trunnion Mount for pivoting mount

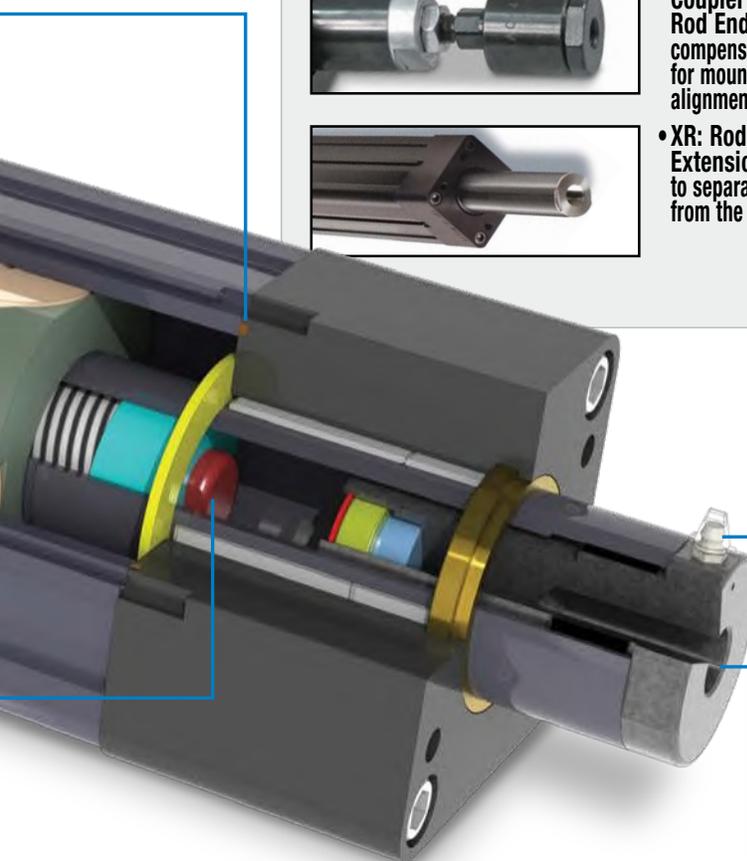

Below are for RP Motor mounting only

• BFG: Rear Flange for mounting opposite the rod end

• PCD: Clevis
• PCS: Eye Mount for pivoting mount

THREADED ROD END

Provides a common interface to multiple rod end options

GREASE ZERK

- This relubrication system provides extended screw service life
- Convenient lubrication without disassembly
- Standard with all HT option RSA actuators
- Grease zerk orientation is not pre-defined. Custom orientation can be requested as a product modification

GSA GUIDED ROD-STYLE ACTUATOR

ENDURANCE TECHNOLOGYSM

A Tolomatic Design Principle

Endurance Technology features are designed for maximum durability to provide extended service life.

The GSA guided screw actuator is ideal for medium thrust applications. The self-contained guided rod design and cylinder slide style operation make this solution ideal for applications requiring guidance and support of the load. A robust, wide tooling plate allows easy mounting of the required end effectors for many applications. Built-to-order in stroke lengths up to 36 in (914 mm) with your choice of screw technology.

MULTIPLE SCREW TECHNOLOGIES

YOU CAN CHOOSE:

- Solid nuts of bronze or engineered resins offer quiet performance at the lowest cost; anti-backlash available
- Ball nuts offer efficiency at a cost effective price; low-backlash available

ROD WIPER

Prevents contaminants from entering the housing for extended life of the actuator

LIGHTWEIGHT ALUMINUM DESIGN

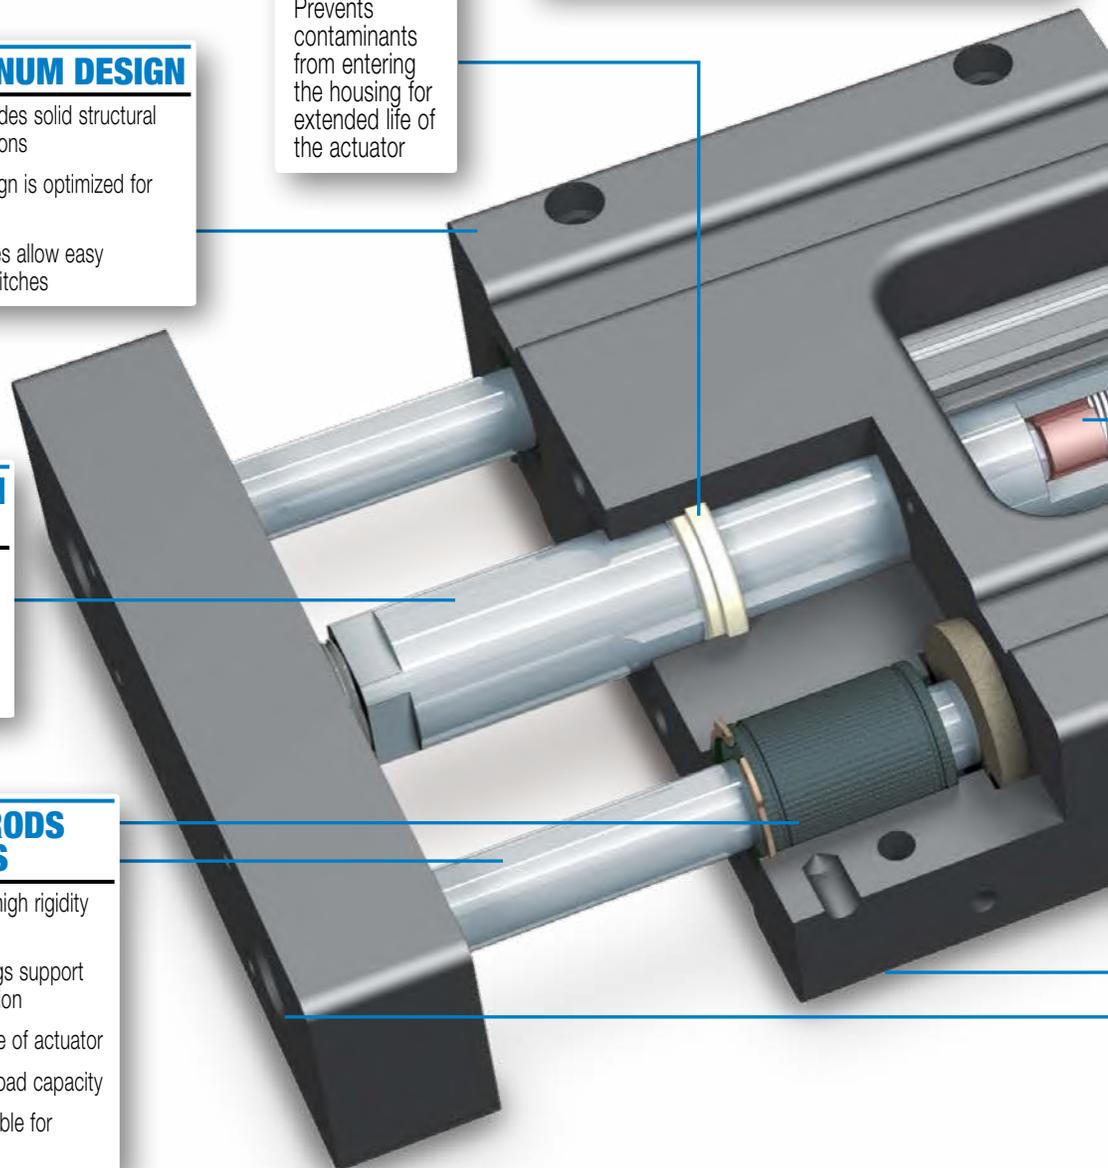

- Black anodized bearing block provides solid structural support and multiple mounting options
- Black anodized tube extrusion design is optimized for rigidity and strength
- External switch channels on all sides allow easy placement of position indicating switches

ANODIZED ALUMINUM THRUST TUBE

- Lightweight design directly provides thrust with minimal additional inertia
- Corrosion resistant plating provides excellent protection from many chemicals

INTEGRAL GUIDE RODS AND BEARINGS

- Hardened steel guide rods provide high rigidity and low deflection
- Four composite or linear ball bearings support the load for smooth, consistent motion
- Lubrication wick supplies lube for life of actuator
- Oversized rods available for higher load capacity
- Stainless steel shafting option available for corrosion resistance

YOUR MOTOR HERE

YOU CAN CHOOSE:

- Specify the device to be installed and actuator ships with proper mounting hardware
- Specify and ship your device to Tolomatic for factory installation
- Motor supplied and installed by Tolomatic

MOTOR ORIENTATION

YOU CAN CHOOSE:

- Inline option directly couples the driving shaft and is typically a one-piece housing construction for optimum alignment and support of the motor
- Reverse-parallel option minimizes the overall length, coupling motor and driving shaft via a belt with a 1:1 or 2:1 reduction ratio

SCREW SUPPORT BEARINGS

- Unique high thrust bearing assembly design eliminates runout and isolates the linear forces for the drive shaft
- Engineered resin bearing provides continuous support of screw

PRECISION MACHINED SURFACES

- Extruded bearing housing is precision machined on two surfaces for true and easily aligned linear motion
- Tooling plate is aligned and assembled to provide a precise mounting surface

OPTIONS

• OVERSIZED GUIDE RODS

Available for increased load capacity or decreased deflection

• STOP COLLARS

Provide a positive stop mechanism when required

• CORROSION RESISTANCE

Includes 316 stainless steel guide rods and fasteners for better environmental protection

• METRIC OPTION

Provides metric tapped holes for mounting of load to tooling plate and of actuator to mating surfaces

• SWITCHES

Choose from: Reed, Solid State PNP or NPN, all available normally open or normally closed

PV LIMITS

PV LIMITS: Any material which carries a sliding load is limited by heat buildup. The factors that affect heat generation rate in an application are the pressure on the nut in pounds per square inch and the surface velocity in feet per minute. The product of these factors provides a measure of the severity of an application.

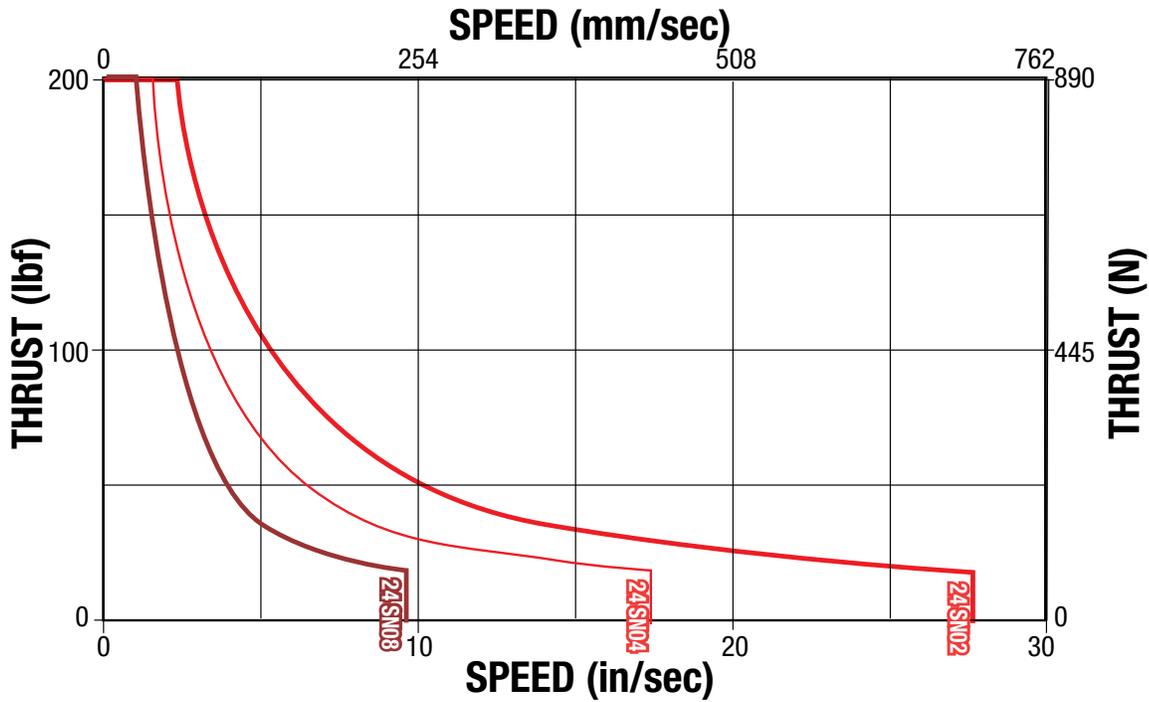

$$\frac{P}{\text{(Max. Thrust Rating)}} \times \frac{V}{\text{(Max. Speed Rating)}} \leq 0.1$$

SN	Solid Nut

SIZE: 50, 64

NOTE: The L_{10} expected life of a ball screw linear actuator is expressed as the linear travel distance that 90% of properly maintained ball screw manufactured are expected to meet or exceed. This is not a guarantee and this graph should be used for estimation purposes only.

The underlying formula that defines this value is:

$$L_{10} = \left(\frac{C}{P_e} \right)^3 \cdot \ell =$$

L_{10} Travel life in millions of units (in or mm), where:

C = Dynamic load rating (lbf) or (N)

P_e = Equivalent load (lbf) or (N)

If load is constant across all movements then:

actual load = equivalent load

ℓ = Screw lead (in/rev) (mm/rev)

Use the "Equivalent Load" calculation below, when the load is not constant throughout the entire stroke. In cases where there is only minor variation in loading, use greatest load for life calculations.

Where:
$$P_e = \sqrt[3]{\frac{L_1(P_1)^3 + L_2(P_2)^3 + L_3(P_3)^3 + L_n(P_n)^3}{L}}$$

P_e = Equivalent load (lbf) or (N)

P_n = Each increment at different load (lbf) or (N)

L = Total distanced traveled per cycle (extend + retract stroke)
[$L = L_1 + L_2 + L_3 + L_n$]

L_n = Each increment of stroke at different load (in) or (mm)

	mm	13.5	M27x2.0	54.0	147.0	32.0	55.0

Used in combination with the externally threaded rod end to provide smooth motion and extends actuator life by preventing binding caused by angular or axial misalignment. Not available for use with clevis or trunnion mounts, as they must be rigidly mounted.

If you need external thread, be sure to also order the **MET** external rod end

XR OPTIONAL ROD EXTENSION

In **vertical applications only**, the thrust rod length can be extended by specifying the rod extension option. This does not increase the working stroke, only the length of the thrust rod.

NOTE: the XR dimension in the configurator string (extension + stroke) should not exceed the maximum stroke of the specified actuator. Consult Tolomatic for extensions greater than the maximum stroke length.

SCREW CODE	DESCRIPTION
BN	Ball Nut
BNH	Ball Nut H-series
BNL	Low-Backlash Ball Nut
BNM	Ball Nut Metric
BZ	Bronze Nut
RN	Roller Nut
SN	Solid Nut

Contact Tolomatic for higher accuracy and lower backlash options.

† (L) for low backlash ball screws: backlash = 0.0020" (0.05 mm)

* For SN & BZ screws, maximum continuous dynamic thrust subject to Thrust x Velocity limitation.

** For RN, BN & BNL screws, dynamic load rating reflects 90% reliability for 1 million revolutions.

§ RSA50 & RSA64 extended stroke length 48" (1219 mm) available for roller screws, contact Tolomatic for production time

RSA HT Electric Rod-Style Actuator

sizeit.tolomatic.com
for fast, accurate
actuator selection

SIZE: **24, 32, 50, 64** units: **metric****

SPECIFICATIONS

** RSA metric actuators use the same leadscrew as the RSA inch actuators. Threaded mounting and dowel pin holes are metric.

PV LIMITS

PV LIMITS: Any material which carries a sliding load is limited by heat buildup. The factors that affect heat generation rate in an application are the pressure on the nut in pounds per square inch and the surface velocity in feet per minute. The product of these factors provides a measure of the severity of an application.

$$P \times V \leq 0.1$$

$$\left(\frac{\text{Thrust}}{\text{(Max. Thrust Rating)}} \right) \times \left(\frac{\text{Speed}}{\text{(Max. Speed Rating)}} \right) \leq 0.1$$

SIZE: 50, 64

NOTE: The L_{10} expected life of a ball screw linear actuator is expressed as the linear travel distance that 90% of properly maintained ball screw manufactured are expected to meet or exceed. This is not a guarantee and this graph should be used for estimation purposes only.

The underlying formula that defines this value is:

$$L_{10} = \left(\frac{C}{P_e} \right)^3 \cdot \ell =$$

L_{10} Travel life in millions of units (in or mm), where:

C = Dynamic load rating (lbf) or (N)

P_e = Equivalent load (lbf) or (N)

If load is constant across all movements then:

actual load = equivalent load

ℓ = Screw lead (in/rev) (mm/rev)

Use the "Equivalent Load" calculation below, when the load is not constant throughout the entire stroke. In cases where there is only minor variation in loading, use greatest load for life calculations.

Where:
$$P_e = \sqrt[3]{\frac{L_1(P_1)^3 + L_2(P_2)^3 + L_3(P_3)^3 + L_n(P_n)^3}{L}}$$

P_e = Equivalent load (lbf) or (N)

P_n = Each increment at different load (lbf) or (N)

L = Total distanced traveled per cycle (extend + retract stroke)
[L = L₁ + L₂ + L₃ + L_n]

L_n = Each increment of stroke at different load (in) or (mm)

Gasket Kit providing ingress protection against dust and splashing water available upon request

Contact Tolomatic if operation in the extended range is required.

* Heat generated by the motor and drive should be taken into consideration as well as linear velocity and work cycle time. For applications that require operation outside of the recommended temperature range, contact Tolomatic.

LARGE FRAME MOTORS AND SMALLER SIZE ACTUATORS: Cantilevered motors need to be supported, if subjected to continuous rapid reversing duty and/or under dynamic conditions.

SIDE LOADING CONSIDERATIONS: Rod screw actuators are designed to push guided and supported loads and are not meant for applications that require substantial side loading. Please contact Tolomatic for details regarding side loading capabilities.

SPECIFICATIONS

RE-LUBRICATION RECOMMENDATION:

RSA-HT Lubrication requirements for electric actuators depend on the motion cycle (velocity, force, duty cycle), type of application, ambient temperature, environmental surrounding and various other factors.

For many general purpose applications, Tolomatic ball screw actuators are typically considered lubricated for life unless otherwise specified, such as those actuator models outfitted with a re-lubrication feature. For roller screw or ball screw actuators outfitted with a re-lubrication feature, Tolomatic recommends to re-lubricate the actuator at least once per year or every 1,000,000 cycles, whichever comes first, to maximize service life. For more demanding applications such as pressing,

high frequency or other highly stressed applications, the re-lubrication interval for these actuators will vary and will need to be more frequent. In these demanding applications, it is recommended to execute at least 5 full stroke moves every 5,000 cycles of operation (or more frequent if possible) to re-distribute the grease within the actuator.

Re-lubricate with Tolomatic Grease into the grease zerk located on the rod end.

	RSA24	RSA32	RSA50	RSA64
Qty.	2.5g + (0.010x §mm)	4.8g + (0.010x §mm)	5.3g + (0.018x §mm)	6.6g + (0.018x §mm)
Qty.	0.09oz + (0.009x §in)	0.17oz + (0.009x §in)	0.19oz + (0.016x §in)	0.23oz + (0.016x §in)

§ = Stroke length (mm or in)

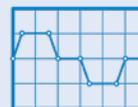

In some applications oil may leak from the grease zerk. In contamination sensitive applications replace grease zerk with plug.

GREASE ZERK

- This relubrication system provides extended screw service life
- Convenient lubrication without disassembly
- Standard with all HT option RSA actuators
- Grease zerk orientation is not pre-defined. Custom orientation can be requested as a product modification

	mm	13.5	M27x2.0	54.0	147.0	32.0	55.0

Used in combination with the externally threaded rod end to provide smooth motion and extends actuator life by preventing binding caused by angular or axial misalignment. Not available for use with clevis or trunnion mounts, as they must be rigidly mounted.

DIMENSIONS

tolomatic.com/CAD Download 3D CAD Always use CAD solid model to determine critical dimensions

XR OPTIONAL ROD EXTENSION

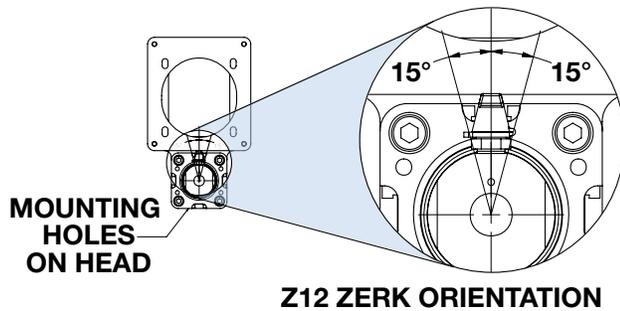

In **vertical applications only**, the thrust rod length can be extended by specifying the rod extension option. This does not increase the working stroke, only the length of the thrust rod.

NOTE: the XR dimension in the configurator string (extension + stroke) should not exceed the maximum stroke of the specified actuator. Consult Tolomatic for extensions greater than the maximum stroke length.

Maximum Stroke Length

Size	All Screws	
24	in	24
	mm	609.6
32	in	36
	mm	914.4
50	in	48
	mm	1219.2
64	in	60
	mm	1524

Z12 ZERK ORIENTATION

The orientation of the zerk is unspecified unless the Z12 ordering code included in the configuration string

PV LIMITS

PV LIMITS: Any material which carries a sliding load is limited by heat buildup. The factors that affect heat generation rate in an application are the pressure on the nut in pounds per square inch and the surface velocity in feet per minute. The product of these factors provides a measure of the severity of an application.

$$P \times V \leq 0.1$$

$$\left(\frac{\text{Thrust}}{\text{Max. Thrust Rating}} \right) \times \left(\frac{\text{Speed}}{\text{Max. Speed Rating}} \right) \leq 0.1$$

BALL SCREW LIFE GRAPHS

SPECIFICATIONS

SIZE: 12, 16, 24, 32

NOTE: The L_{10} expected life of a ball screw linear actuator is expressed as the linear travel distance that 90% of properly maintained ball screw manufactured are expected to meet or exceed. This is not a guarantee and this graph should be used for estimation purposes only.

The underlying formula that defines this value is:

$$L_{10} = \left(\frac{C}{P_e} \right)^3 \cdot \ell \equiv$$

L_{10} Travel life in millions of units (in or mm), where:

- C = Dynamic load rating (lbf) or (N)
- P_e = Equivalent load (lbf) or (N)
If load is constant across all movements then:
actual load = equivalent load
- ℓ = Screw lead (in/rev) (mm/rev)

Use the "Equivalent Load" calculation below, when the load is not constant throughout the entire stroke. In cases where there is only minor variation in loading, use greatest load for life calculations.

Where:
$$P_e = \sqrt[3]{\frac{L_1(P_1)^3 + L_2(P_2)^3 + L_3(P_3)^3 + L_n(P_n)^3}{L}}$$

- P_e = Equivalent load (lbf) or (N)
- P_n = Each increment at different load (lbf) or (N)
- L = Total distanced traveled per cycle (extend + retract stroke)
[$L = L_1 + L_2 + L_3 + L_n$]
- L_n = Each increment of stroke at different load (in) or (mm)

Contact Tolomatic if operation in the extended range is required.

* Heat generated by the motor and drive should be taken into consideration as well as linear velocity and work cycle time. For applications that require operation outside of the recommended temperature range, contact Tolomatic.

LARGE FRAME MOTORS AND SMALLER SIZE ACTUATORS: Cantilevered motors need to be supported, if subjected to continuous rapid reversing duty and/or under dynamic conditions.

SIDE LOADING CONSIDERATIONS: Rod screw actuators are designed to push guided and supported loads and are not meant for applications that require substantial side loading. Please contact Tolomatic for details regarding side loading capabilities.

MAX. LOAD WEIGHT & GUIDE ROD DEFLECTION

Linear ball bearings are not available with stainless steel guide rod option.

DO NOT EXCEED MAXIMUM LOAD CURVE

Maximum load values are based on 200 million linear inches of travel.

- To obtain most accurate results, stroke length should be adjusted by the distance between the center of mass of the load and tooling plate.

$$X_{adj} = X_s + X_{cm}$$

Then, use X_{adj} instead of X_s on the Maximum Load Weight vs. Stroke Length graph.

- For the off-center loads, calculate adjusted load weight using the following formula:

$$W_{adj} = W (1 + 0.67 Y_{cm})$$

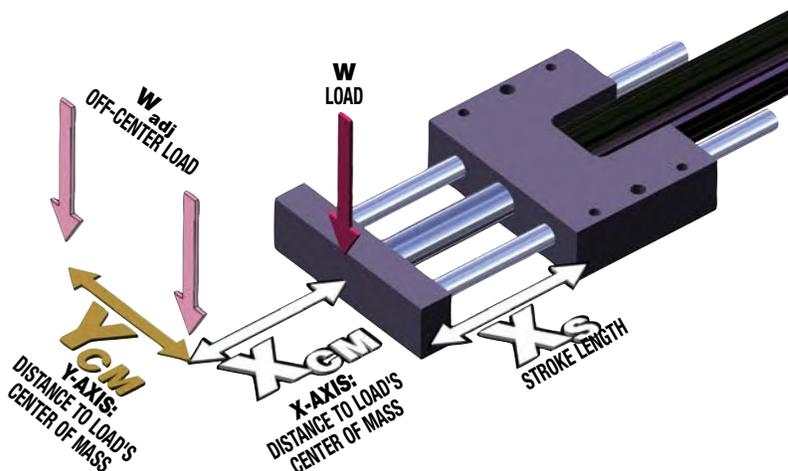

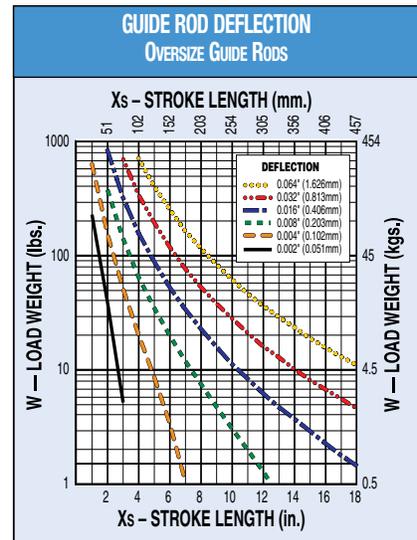

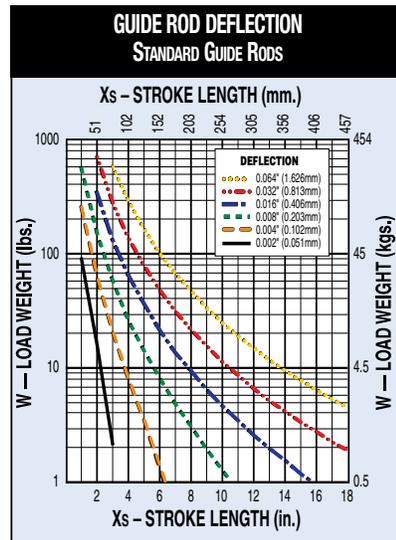

where Y_{cm} is distance between center of mass of off-center load and center of tooling plate.

Then, use W_{adj} instead of W on Maximum Load Weight vs. Stroke Length graph.

- Using your stroke length and load weight, evaluate guide rod deflection. If the intersection point is above the highest curve (.064"), contact Tolomatic for assistance.

- Impact loading is not recommended for GSA actuators.
- Motor brakes may be required on vertically positioned actuators with plastic (solid) or ball nuts in applications with risk of load backdriving. (Actuators with bronze nuts will not backdrive for loads, thrusts within catalog specifications.)

Contact Tolomatic for assistance.

where Y_{cm} is distance between center of mass of off-center load and center of tooling plate.

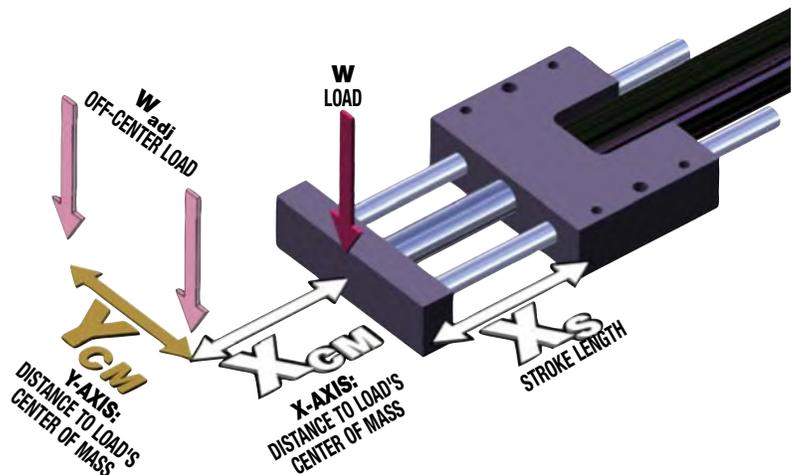

Then, use W_{adj} instead of W on Maximum Load Weight vs. Stroke Length graph.

- Using your stroke length and load weight, evaluate guide rod deflection. If the intersection point is above the highest curve (.064"), contact Tolomatic for assistance.

OVERSIZE GUIDE RODS

- Impact loading is not recommended for GSA actuators.
- Motor brakes may be required on vertically positioned actuators with plastic (solid) or ball nuts in applications with risk of load backdriving. (Actuators with bronze nuts will not backdrive for loads, thrusts within catalog specifications.)

Contact Tolomatic for assistance.

RSA & GSA products offer a wide range of sensing choices. There are 12 switch choices: reed, solid state PNP (sourcing) or solid state NPN (sinking); in normally open or normally closed; with flying leads or quick-disconnect.

Commonly used for end-of-stroke positioning, these switches allow installation anywhere along the entire actuator length. The internal magnet is a standard feature. Switches can be installed in the field at any time.

Switches are used to send digital signals to PLC (programmable logic controller), TTL, CMOS circuit or other controller device. Switches contain reverse polarity protection. Solid state QD cables are shielded; shield should be terminated at flying lead end.

All switches are CE rated and are RoHS compliant. Switches feature bright red or yellow LED signal indicators; solid state switches also have green LED power indicators.

	Order Code	Lead	Switching Logic	Power LED	Signal LED	Operating Voltage	**Power Rating (Watts)	Switching Current (mA max.)	Current Consumption	Voltage Drop	Leakage Current	Temp. Range	Shock / Vibration
REED	R Y	5m	SPST Normally Open	—	Red	5 - 240 AC/DC	**10.0	100mA	—	3.0 V max.	—	14 to 158°F [-10 to 70°C]	50 G / 9 G
	R K	QD*											
	N Y	5m	SPST Normally Closed	—	Yellow	5 - 110 AC/DC							
	N K	QD*											
SOLID STATE	T Y	5m	PNP (Sourcing) Normally Open	Green	Yellow	10 - 30 VDC	**3.0	100mA	20 mA @ 24V	2.0 V max.	0.05 mA max.		
	T K	QD*											
	K Y	5m	NPN (Sinking) Normally Open	Green	Red								
	K K	QD*											
	P Y	5m	PNP (Sourcing) Normally Closed	Green	Yellow								
	P K	QD*											
	H Y	5m	NPN (Sinking) Normally Closed	Green	Red								
	H K	QD*											

*QD = Quick-disconnect Enclosure classification IEC 529 IP67 (NEMA 6)

CABLES: Robotic grade, oil resistant polyurethane jacket, PVC insulation

⚠️ **WARNING: Do not exceed power rating (Watt = Voltage x Amperage). Permanent damage to sensor will occur.

SWITCH INSTALLATION

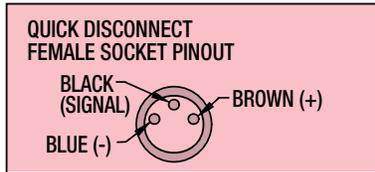

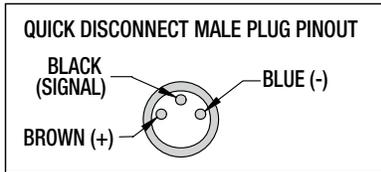

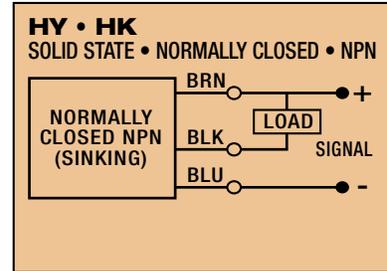

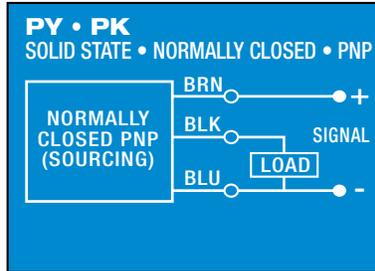

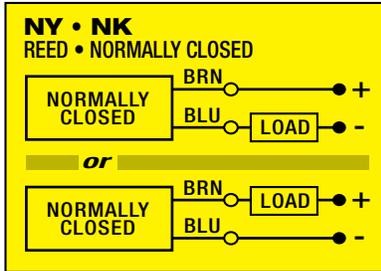

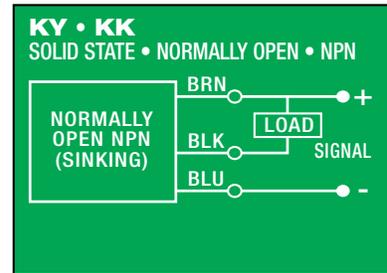

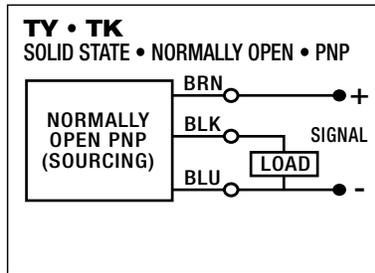

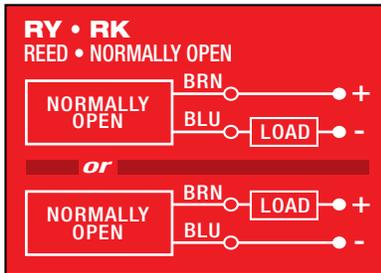

Place switch bracket into one of the four slots that run the length of the extruded tube. Note that there is a cutout on the actuator head (RSA) or tube (GSA) to allow insertion of the bracket. Insert the switch with the word "Tolomatic" facing up and slide it under the bracket. Position the bracket with the switch to the exact location desired, then lock them securely into place by tightening both set screws on the bracket.

 actuator selection

RSA & GSA Electric Rod-Style Actuators

Selection Guidelines

1 ESTABLISH MOTION PROFILE

Using the application stroke length, desired cycle time, loads and forces, establish the motion profile details including linear velocity and thrust in each of its segments.

2 SELECT ACTUATOR TYPE

If side (radial) loads are present, select GSA.

3 SELECT ACTUATOR SIZE AND SCREW TYPE

Based on the required velocities and thrust select an actuator size and type and lead of screw drive.

4 VERIFY CRITICAL SPEED OF THE SCREW

Verify that the application's peak linear velocity does not exceed the critical speed value for the size and lead of the screw selected.

5 VERIFY AXIAL BUCKLING STRENGTH OF THE SCREW

Verify that the peak thrust does not exceed the critical buckling force for the size of the screw selected.

6 COMPARE APPLICATION'S PEAK PARAMETERS TO PEAK CAPACITY (PEAK REGION) OF SELECTED ACTUATOR (ROLLER SCREW)

When a roller screw is selected, calculate the application's required peak thrust and peak velocity and compare to the graphs. The selection must satisfy the application's peak requirements.

7 CALCULATE LUBRICATION INTERVAL (ROLLER SCREW)

When a roller screw is selected, calculate the recommended lubrication interval. See page R/GSA_33 and parts sheets for complete lubrication information for the RSA24, RSA32, RSA50 and RSA64 HT option.

The above guidelines are for reference only. Use Tolomatic online sizing software for best results.

8 TEMPERATURE CONSIDERATIONS

If the application's ambient temperature lies outside of the allowed range [roller screw: 50° to 122°F (10° to 50°C), all others 40° to 130°F (4° to 54°C)], contact the factory. Note that in aggressive applications where roller screw is used, outside temperature of the actuator's body can approach 180°F (82°C), and adequate clearance to avoid overheating of other system components should be allowed.

9 ESTABLISH TOTAL TORQUE REQUIREMENTS

Calculate total system inertia, the peak and the RMS torque required from the motor to overcome internal friction, external forces and accelerate/decelerate the load.

10 SELECT A MOTOR AND A CONTROLLER

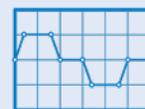

Use the obtained total torque value to select a motor and a reduction device (if required). Verify that the peak torque value is below the motor's peak torque curve, and that the continuous torque value is below the motor's continuous torque curve. Verify the minimum torque margin (15%). Verify the inertia match. Select a controller.

11 SELECT A MOTOR-ACTUATOR CONFIGURATION AND SENSORS IF REQUIRED

Select an inline or a reverse-parallel motor configuration. Select mounting and rod end options. Select position sensors (if required). 12 sensor choices include: reed, solid state PNP or NPN, all in normally open or normally closed, with flying leads or quick-disconnect couplers.

12 SELECT ROD END OPTIONS AND MOUNTING OPTIONS

Rod end options include: CLV clevis rod end, SRE spherical rod end, MET externally threaded rod end, ALC alignment coupler, XR rod extension. Mounting options include: TRN trunnion mount, FFG front flange mount, MP2 mounting plates, PCD clevis mount, PCS eye mount, BFG back flange mount.

RSA & GSA SWITCHES

To order switch kit use configuration code for switch preceded by SW and actuator code.

EXAMPLE: **SWR|SA|24|KK**

The example is for Solid State NPN, Normally Open Switch with Quick-disconnect couplers. Each switch kit is complete with Bracket, Set Screw, Switch and mating QD cable. Note that the bracket/switch size is common and may be used on any size RSA.

NOTE: Refer to parts sheets to replace switches on actuators manufactured before 5-10-2010.

	BN, BNL	02,04,53
	BNM	05,10,20
	BNH	02
	RN	05,10

STROKE LENGTH

SK ___ Enter desired stroke length in decimal inches

SM† ___ (Metric Mounting)
Enter desired stroke length in millimeters

† The metric version provides metric tapped rod end, actuator mounting and dowel pins

NOTE: Actuator mounting threads and mounting fasteners will be either inch or metric; depending on how stroke length is indicated SK=inch mounting

SM= metric mounting

MAXIMUM STROKE

SIZE	BN, BZ, SN		RN	
	in	mm	in	mm
12	12	304.8	12	304.8
16	18	457.2	18	457.2
24	24	609.6	24	609.6
32	36	914.4	36	914.4
50	48	1,219.2	36 ^S	914.4 ^S
64	60	1,524.0	36 ^S	914.4 ^S

MOTOR MOUNTING

LMI	In-line motor mount
RP1	1:1 ratio, reverse parallel motor mount
RPL1	1:1 ratio, reverse parallel motor mount, left or right see page 18 for details
RPR1	1:1 ratio, reverse parallel motor mount, left or right see page 18 for details
RP2	2:1 ratio, reverse parallel motor mount
RPL2	2:1 ratio, reverse parallel motor mount, left or right see page 18 for details
RPR2	2:1 ratio, reverse parallel motor mount, left or right see page 18 for details

⊗ RP2 not available on 12 or 16 size

RP BELT TENSIONING

TEN Belt tensioning tool for RP motor mounting

STANDARD OR HIGH TORQUE

ST1 Standard RS Actuator
HT* High Torque Option
*requires keyed motor

⊗ HT not available on 12 or 16 size
NOTE: RN always requires HT option

TRUNNION MOUNT

TRR Trunnion mount
⊗ Not available on 12 or 16 size with LMI motor mount
NOTE: Trunnion mount is not available for field retrofit, contact Tolomatic for details

ACTUATOR MOUNTING

For all motor mounts:
FFG Front Flange Mount
FFGR Front Flange Mount rotated 90° (see pg. 22)
MP2 Mounting Plates (2 required)
For RP motor mounting only:
PCD Clevis Mount
PCDR Clevis Mount rotated 90° (see pg. 25)
PCS Eye Mount
PCSR Eye Mount rotated 90° (see pg. 25)
BFG Back Flange Mount

^S RSA50 & RSA64 extended stroke length 48" (1219 mm) available for roller screws, contact Tolomatic for production time

ROD EXTENSION

XR ___ Enter desired rod extension in inches (SK) or millimeters (SM)

(Same unit of measure as stroke length is required)

▲ For vertical applications only.

NOTE: The XR extension + stroke should not exceed the max. stroke of the specified actuator. (See MAX. STROKE table) Consult Tolomatic for extensions greater than the max. stroke length.

ROD END

Internally threaded rod end is standard
CLV Clevis Rod End
SRE Spherical Rod End
MET Externally Threaded Rod End
ALC Alignment Coupler Rod End*
Z12 Grease Zerk at 12 O'clock position (see page 43)

*NOTE: Alignment coupler is internally threaded, if external thread is desired order MET also

ENVIRONMENTAL PROTECTION

Standard actuator IP54
IP67 Basic ingress protection (RSA32, 50, 64 only)
LUB Grease, Food/Drug

SWITCHES

TYPE	LOGIC	NORMALLY	QUICK-DISCONNECT	CODE	QUANTITY	LEAD LENGTH
REED	SPST	Open	no	RY	After code enter quantity desired	5 meters (16.4 feet)

PNP	Closed	no	PY			
	Closed	yes	PK			
NPN	Closed	no	HY			
	Closed	yes	HK			

Not all codes listed are compatible with all options. Contact Tolomatic with any questions.

YOUR MOTOR HERE

YM _____ Motor mount for non-Tolomatic motor. www.tolomatic.com

Brakes mounted on reverse parallel motor mounts (especially in vertically positioned actuators) will not prevent back driving of the screw and the load falling under gravity in the event of a timing belt failure. An inline motor mount with a fail-safe brake mounted directly to the actuator shaft or a special geared or thru-shaft reverse parallel construction should be considered if a brake is required in a safety critical application. Contact Tolomatic for alternate reverse parallel brake mounting options.

Gearheads may be used with RSA ST or GSA ST reverse parallel motor mounts. However, the torque on the belt and internal ST RP components must remain below the capabilities of the assembly to prevent belt slipping or premature failure. Contact Tolomatic for additional information if required.

GSA Guided Electric Rod-Style Actuator

ORDERING

ACTUATOR GSA 24 BN02 SK23 **OPTIONS** RP1 CBSO CKS KK2 YM

MODEL & MOUNTING
GSA Guided Screw-Drive Actuator

The Tolomatic Difference Expect More From the Industry Leader:

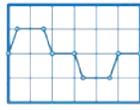

INNOVATIVE PRODUCTS

Solutions with Endurance TechnologySM for challenging applications.

FAST DELIVERY

Built-to-order with configurable stroke lengths and flexible mounting options.

ACTUATOR SIZING

Size and select electric actuators with our online software.

YOUR MOTOR HERE[®]

Match your motor to compatible mounting plates with Tolomatic actuators.

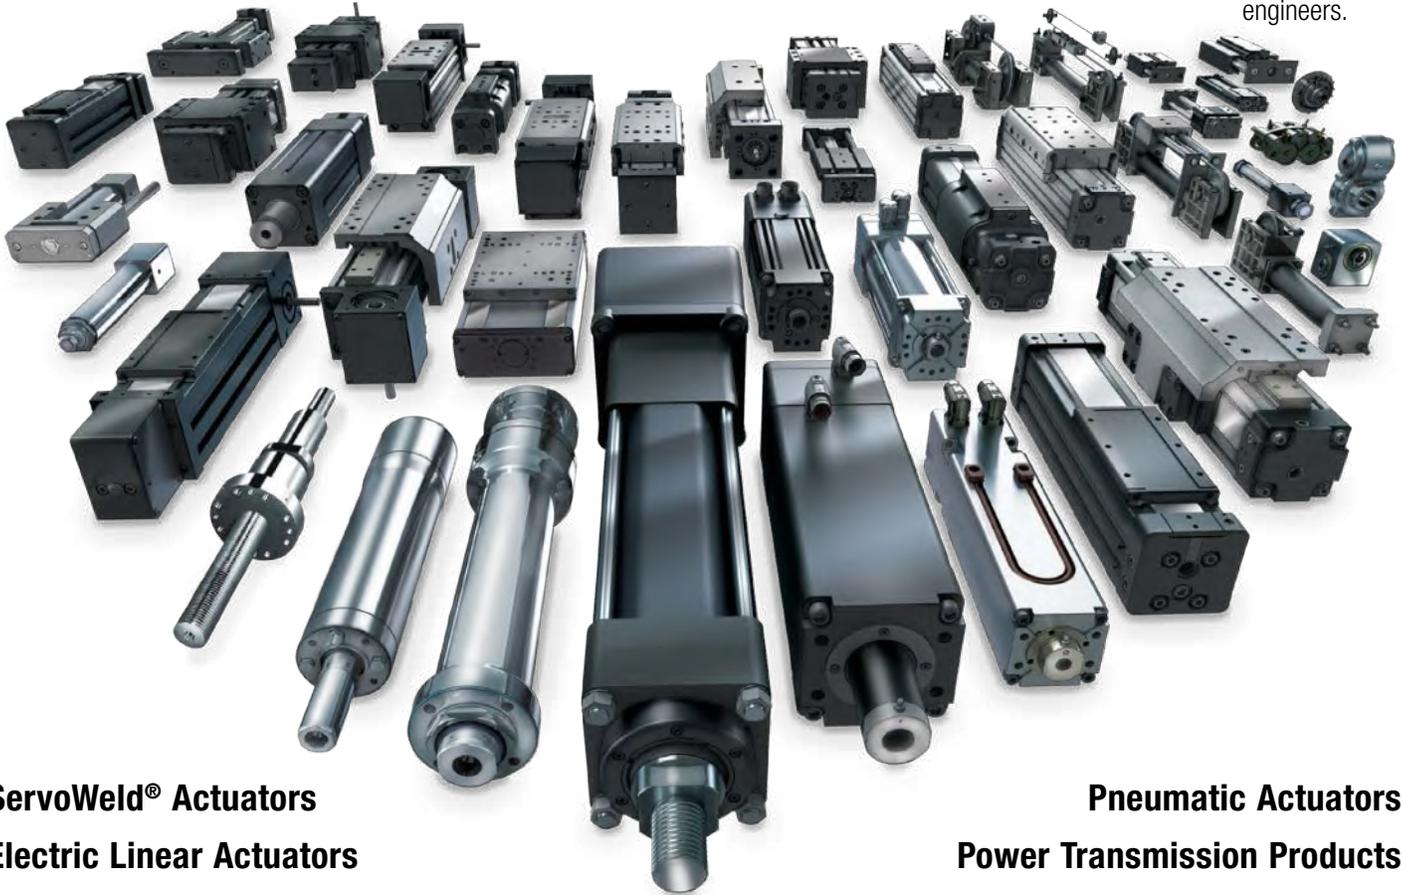

CAD LIBRARY

Download 2D or 3D CAD files for Tolomatic products.
